

1.1.3 & 1.2.1

**Supporting Documents- Department of
Chemical Science**

**Syllabus of courses highlighting the focus on
employability/entrepreneurship/skill development**

SCHEME OF THE PROGRAM:

Semester-I								
Sr. No	Code	Theory Papers	Hours	L-T-P	Credits	Marks Distribution		Marks
						Internal	External	
1.	CHL401-18	Inorganic Chemistry-I	45	4-0-0	4	30	70	100
2.	CHL402-18	Reactive Intermediates-I	45	4-0-0	4	30	70	100
3.	CHL403-18	Physical Chemistry-I	45	4-0-0	4	30	70	100
4.	CHL404-18	Spectroscopy - I	45	4-0-0	4	30	70	100
5.	CHL405-18	Environmental Chemistry	45	3-0-0	3	25	50	75
6.	CHL406A-18 Or CHL406B-18	Human Physiology * Or Numerical Methods for chemists*	45	3-0-0	3	25	50	75
7.	CHP407-18	Inorganic Chemistry Lab	60	0-0-6	3	50	25	75
8.	CHP408-18	Organic Synthesis Lab	60	0-0-6	3	50	25	75
		Total	28 (Theory 22, Practical 6)			270	430	700

Semester-II								
Sr. No	Code	Theory Papers	Hours	L-T-P	Credits	Marks Distribution		Marks
						Internal	External	
1.	CHL411-18	Inorganic Chemistry-II	45	4-0-0	4	30	70	100
2.	CHL412-18	Reactive Intermediates-II	45	4-0-0	4	30	70	100
3.	CHL413-18	Physical Chemistry-II	45	4-0-0	4	30	70	100
4.	CHL414-18	Spectroscopy - II	45	4-0-0	4	30	70	100
5.	CHL415A-18 Or CHL415B-18	Chemistry of Materials Or Chemical Biology	45	4-0-0	4	30	70	100
6.	CHP416-18	Physical Chemistry Lab	60	0-0-6	3	50	25	75
7.	CHP417-18	Advanced Chemistry Lab-I	60	0-0-6	3	50	25	75
		Total	26 (Theory 20, Practical 6)			250	400	650

Semester-III								
Sr. No	Code	Theory Papers	Hours	L-T-P	Credits	Marks Distribution		Marks
						Internal	External	
1.	CHL501-18	Inorganic Chemistry-III	45	4-0-0	4	30	70	100
2.	CHL502-18	Advanced Organic Chemistry –I	45	4-0-0	4	30	70	100
3.	CHL503-18	Physical Chemistry-III	45	4-0-0	4	30	70	100
4.	CHL504-18	Advanced Characterization Techniques	45	4-0-0	4	30	70	100
5.	CHL505A-18 Or CHL505B-18 Or CHL505C-18	Biophysical chemistry Or Medicinal Chemistry Or Advanced Functional Materials	45	4-0-0	4	30	70	100
6.	CHP506-18	Advanced Chemistry Lab-II	60	0-0-6	3	50	25	75
7.	CHP507-18	Dissertation**		0-0-8	4	50	-	50
		Total	27 (Theory 20, Practical 7)			250	375	625

Semester-IV								
Sr. No	Code	Theory Papers	Hours	L-T-P	Credits	Marks Distribution		Marks
						Internal	External	
1.	CHL511-18	Advanced Organic Chemistry- II	45	4-0-0	4	30	70	100
2.	CHL512A-18 Or CHL512B-18 Or CHL512C-18 Or CHL512D-18 Or CHL512E-18 Or CHL512F-18	Advanced physical Chemistry Or Chemical Toxicology Or Supramolecular Chemistry Or Chemistry of Natural Products Or Green Chemistry Or Computational Chemistry	45	4-0-0	4	30	70	100
3.	CHP513-18	Research Seminar	30	3	50	-	50
4.	CHP514-18	Dissertation**		0-0-24	12	150	100	250
		Total	23 (Theory 8, Practical 12, Seminar 3)			260	240	500

* Human Physiology for students with mathematical background and Numerical methods for chemists for students with medical background.

I.K. GUJRAL PUNJAB TECHNICAL UNIVERSITY DEPARTMENT OF CHEMICAL SCIENCES				
Course Name	M.Sc. Chemistry			
Subject Code:	CHL404-18			
Subject Title:	SPECTROSCOPY-I			
Contact Hours:	L:4	T:0	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	1. To learn various techniques of spectrometric identification of organic compounds 2. To characterize organic compounds by applying various techniques together			

Details of the Course

Unit	Contents	Contact Hours
I	General Features of Spectroscopy: Introduction to spectroscopy, Nature of radiation, Energies corresponding to various kinds of radiation, Experimental techniques, intensities of spectral lines, Selection rules and transition moments, Line widths, Broadening. UV and Visible Spectroscopy of organic molecules: Measurement techniques, Beer – Lambert's Law, molar extinction coefficient, oscillator strength and intensity of the electronic transition, Frank Condon Principle, Ground and first excited electronic states of diatomic molecules, relationship of potential energy curves to electronic spectra, Chromophores, auxochromes, blue shift, red shift, hypo and hyperchromic effect, σ - σ^* , π - π^* , n - π^* transitions in organic molecules, Woodward rules for conjugated dienes and α , β -unsaturated carbonyl groups, extended conjugation and aromatic sterically hindered systems, Quantitative applications.	10
II	Infrared Spectroscopy: Introduction, Principle of IR spectroscopy, modes of vibrations, Vibrational frequency, fundamental vibrations, Selection rules, factors affecting vibrational frequencies, IR spectrophotometer, sampling techniques, special features of different classes of organic compounds pertaining to IR spectroscopy (such as aliphatic and aromatic hydrocarbons, halogen compounds, alcohols and phenols, ethers, carbonyl compounds, acids and its derivatives, amines and amides, nitro and nitriles, nitrile compounds, heteroaromatic compounds etc.) and interpretation of IR spectrum, quantitative applications.	10
III	Nuclear Magnetic Resonance Spectroscopy: PMR: Natural abundance of ^{13}C , ^{19}F and ^{31}P nuclei; The spinning nucleus, effect of external magnetic field, precessional motion and frequency, Energy transitions, Chemical shift and its measurements. Factors influencing chemical shift, anisotropic effect; Integrals of protons, proton exchange, spin-spin coupling- splitting theory, one, two and three bond coupling, virtual, long range and allylic coupling, magnitude of coupling constant; factors affecting the coupling constant, Chemical and magnetic equivalence,	15

	First and second order spectra, A2, AB, AX, AB2, AX2, A2B2 and A2X2 spin systems, Simplification of complex spectra (solvent effect, field effect, double resonance and lanthanide shift reagents), CW and FT NMR, Relaxation processes, T1 and T2 measurements, Applications of PMR in structural elucidation of simple and complex compounds. ¹³C-NMR: Resolution and multiplicity of ¹³ C NMR, ¹ H-decoupling, noise decoupling, broad band decoupling; Deuterium, fluorine and phosphorus coupling; NOE and origin of nuclear overhauser effect. off-resonance, proton decoupling, Structural applications of ¹³ C-NMR., pulse sequences, pulse widths, spins and magnetization vectors, DEPT, INEPT, Introduction to 2D-NMR, COSY, NOESY, HMBC and HSQC spectra.	
IV	Mass Spectrometry: Introduction, methods of ionization EI & CI, Brief description of LD, FAB, SIMS, FD etc., Ion analysis methods (in brief), isotope abundance, Metastable ions, general rules predicting the fragmentation patterns. Nitrogen rule, determination of molecular ion peak, index of H efficiency, fragmentation patterns for aliphatic compounds, alkyl halides, aryl halides, alcohols, amines, aldehydes, Ketones, esters, amides, nitriles, carboxylic acids, ethers, monocyclic aromatic compounds.	10

6	C.N Banwell	Fundamentals of Molecular Spectroscopy	Tata Mc Graw Hill

Course Outcomes and Mapping

At the end of the course, the student will be able to	
CO1.	Solve structural problems based on UV-Vis, IR, ¹ H-NMR, ¹³ C-NMR and mass spectral data.
CO2.	Elucidate the structures of various organic compounds on the basis of spectral data.
CO3.	Understand various involved processes responsible for NMR chemical shifts and splitting patterns and mass spectrometry.
CO4.	Illustrate the mechanisms that give rise to the infrared and UV-Visible absorption bands and identify to which functional groups each correspond.

Course Name	M.Sc. Chemistry			
Subject Code:	CHP407-18			
Subject Title:	INORGANIC CHEMISTRY LAB			
Contact Hours:	L:0	T:0	P:6	Credits:3
Examination Duration (hours)	6			
Objective(s):	The objective of this course is to provide practical knowledge and illustrative experiments about synthesis and characterization of inorganic complexes and estimation of metal ions.			

Details of the Course

Unit	Contents
I	<p>Synthesis and characterization of following complexes and estimation of metal ions:</p> <ol style="list-style-type: none"> 1. Synthesis of tris(ethylenediamine)nickel(II) dichloride, $[\text{Ni}(\text{en})_3]\text{Cl}_2$, and estimation of Ni(II). Record and interpret its IR, UV-vis and magnetic susceptibility. 2. Synthesis of hexaaminenickel(II) dichloride $[\text{Ni}(\text{NH}_3)_6]\text{Cl}_2$ and estimation of Ni(II). Record and interpret its IR, UV-vis and magnetic susceptibility. 3. Synthesis of $[\text{Cu}(\text{NH}_3)_4]\text{SO}_4 \cdot \text{H}_2\text{O}$ and estimation of Copper. 4. To prepare cis and trans copper glycine complexes. 5. Preparation of $[\text{VO}(\text{acac})_2]$. Record and interpret its IR, UV-vis and magnetic susceptibility. 6. To prepare a pure sample of tris(acetylacetonate)cobalt(III), $\text{Co}(\text{acac})_3$. Record and interpret its IR, UV-vis spectrum. 7. Preparation of tris(nitro-acetylacetonate)cobalt(III), $\text{Co}(\text{acac-NO}_2)_3$, record and interpret its proton NMR spectrum. 8. To prepare $[\text{Fe}(\text{NO})(\text{S}_2\text{CNET}_2)_2]$. Record and interpret its IR and UV-vis spectrum, Magnetic Susceptibility and Analysis of Fe(II).
II	<p>Gravimetric Analysis</p> <ol style="list-style-type: none"> 1. Determination of Ba^{2+} as its chromate. 2. Estimation of lead as its lead molybdate. 3. Estimation of chromium (III) as its lead chromate. 4. Estimation of Cu^{2+} using Ammonium/Sodium thiocyanate

Course Outcomes and Mapping

At the end of the course, the students will learn

- CO1.** Preparation of different inorganic complexes.
- CO2.** Purification and crystallisation of inorganic compounds.
- CO3.** Interpretation of compounds using UV-Vis, FT-IR techniques.
- CO4.** Measurement of various physical properties such as magnetic moment of complexes.
- CO5.** Gravimetric analysis of various cations.

Subject Code:	CHP408-18			
Subject Title:	ORGANIC SYNTHESIS LAB			
Contact Hours:	L:0	T:0	P:6	Credits:3
Examination Duration (hours)	6			
Objective(s):	1. To learn various practical techniques for synthesis, identification, isolation, purification and characterization of organic compounds. 2. To carry out hand on experience the various methods of organic synthesis.			

Details of the Course

Unit	Contents
I	Techniques: (At least One Practical of Each Technique) Crystallization, Purification by Sublimation, Distillation, Fractional Distillation, Steam Distillation, Vacuum Distillation, Preparative chromatography, Column Chromatography, TLC stains preparation and Thin Layer Chromatography. (Purity is to be checked by m.p. and mixed m.p.)
II	Preparation of Derivatives: (Each Derivative of at least one Compound) Oxime, 2,4-DNP, Acetyl, Benzoyl, Semicarbazone, Anilide, Amide, Aryloxyacetic acid.
III	Preparations: (a) At least eight single stage preparations from the following should be carried out. The preparations should be carried out on micro scale. i) Cyclohexanone to Adipic acid ii) Benzophenone to Benzhydral iii) Anthracene to Anthraquinone iv) Chlorobenzene to 2,4-Dinitrochlorobenzene v) 2,4-Dinitrochlorobenzene to 2,4-Dinitrophenol vi) Acetoacetic ester to 1-Phenyl-3-methyl-5 pyrazolone vii) Benzaldehyde to Cinnamic acid viii) 4-Chlorobenzaldehyde to 4-Chlorobenzoic acid and 4-Chlorobenzyl alcohol ix) Benzene to β -Benzoyl propionic acid x) Benzaldehyde to Dibenzylidene acetone xi) p-Aminobenzoic acid to p-Chlorobenzoic acid xii) N,N-Dimethylaniline to 4-Formyl-N, N-dimethyl aniline xiii) Benzophenone to Benzpinacol xiv) p-Nitrotoluene to p-Nitro benzoic acid xv) Anisole to 2,4-Dinitroanisole xvi) Phthalic anhydride to phthalimide xvii) Phthalimide to Anthranilic acid xviii) Acetanilide to p-Bromoacetanide xix) p-Bromoacetanide to p-Bromoaniline xx) m-Dinitrobenzene to m-Nitroaniline (b) Minimum 2 two stage and 2 three stage preparations to reveal how to develop a synthetic sequence. (c) Interpretation of NMR, IR and Mass Spectra of about 10 compounds.

Course Name	M.Sc. Chemistry			
Subject Code:	CHP416-18			
Subject Title:	PHYSICAL CHEMISTRY LAB			
Contact Hours:	L:0	T:0	P:6	Credits:3
Examination Hours:	6			
Objective(s):	To provide students practical knowledge and skills about various topics taught in theory class of physical chemistry			

Details of the Course

Any fifteen experiments to be performed out of the following:

1. Find graphically the equivalent conductance at infinite dilution of weak electrolyte and hence determine the thermodynamic dissociation constant of the weak acid.
2. Determine the equivalent conductance of a strong electrolyte at several concentrations and verify the Onsager's equation.
3. Determine the equivalent conductance of a weak electrolyte at infinite dilution using Kohlraush law.
4. To determine relative strength of two acids by conductance measurements.
5. Determine the solubility of a sparingly soluble salt in water using conductance measurements.
6. Determine the end point of some typical titrations by conductometric method.
7. Determine the composition of a mixture of acetic acid and hydrochloric acid by conductometric titration.
8. Study the kinetics of saponification of ethyl acetate by sodium hydroxide and hence determine the activation energy of the reaction.
9. Investigate the reaction between acetone and iodine.
10. Determine the relative strength of two acids studying the hydrolysis of an ester.
11. Study the kinetics of decomposition of the complex formed between sodium sulphide and sodium nitroprusside spectrophotometrically and find the rate constant and order of the reaction.
12. Investigate the inversion of cane sugar in presence of an acid.
13. Obtain a calibration curve for a given compound and verify Beer-Lambert law.
14. Study the complex formation between Fe (III) and salicylic acid, and find the formula and the stability of the complex.
15. Determine the concentration of Nickel in solution by spectrophotometric titration.
16. Determination of specific and molar refraction of a liquid by Abbe refractometer.
17. Determine the refraction equivalents of C, H, and Cl atoms.
18. Determine the composition of mixture of two liquids by refractive index measurements.
19. Determination of surface tension of given liquid by a) drop number method and b) drop weight method using stalagmometer.
20. Determine the critical micellar concentration of soap (sodium or potassium lauryl sulphate) by surface tension measurements.
21. Determine the parachor of the mixture using surface tension measurements.
22. Compare the cleansing power of two samples of detergent.

23. Determination of transition temperature of given substance by thermometric or dilatometric method.
24. Find water equivalent and heat of neutralization of strong acid vs strong base, weak base vs. strong acid using Dewar's flask.

Reference Books

1. Advanced Practical Physical Chemistry by J.B. Yadav.
2. Findlay's Practical Physical Chemistry.

Course Outcomes and Mapping

At the end of the course, the students will be able to

- CO1.** Understand the basic procedures for carrying out a physical chemistry practical like preparation and standardisation of solutions, handling the equipments and measuring with precision.
- CO2.** Correlate the theoretical and practical aspects and know about the limits of the experimental error.
- CO3.** Determine the various physical parameters for the various problems under study which in turn will enhance their problem solving and analytical skills.
- CO4.** Verify various laws studied in the theory part.

Details of the Course

S.No.	Contents
I	Inorganic Practicals <ol style="list-style-type: none"> 1. Preparation of Octahedral and Tetrahedral Complexes of dichlorodipyridylcobalt(II), Differentiate them using IR, UV and Magnetic Properties. Estimate Co(II) from one of them. 2. Preparation of cis-and trans-potassium Dioxalato Diaquochromate (III). Interpretation of IR, UV and Magnetic Properties. Estimation of Chromium. 3. Preparation of Salicylamide complexes of Copper(II). IR, UV, magnetic data and analysis of Cu(II). 4. To separate the mixture of metal ions (Cr^{3+}, Ni^{+2}, Cu^{+2}, Zn^{+2}, Fe^{+2}) using thin layer and column chromatography. 5. To perform the solvent extraction for the recovery of metal ions (Cr^{3+}, Ni^{+2}, Cu^{+2}, Zn^{+2}, Fe^{+2}) from aqueous medium.
II	Organic Practicals <ol style="list-style-type: none"> 1. Synthesize (a) 2,4-dinitro-1-chlorobenzene from chlorobenzene, (b) mixture of <i>o</i>- and <i>p</i>-nitrophenols from phenol and (c) <i>p</i>-nitroacetanilide from acetanilide and make comparison of the reactivity of various substrates and reaction conditions used for performing nitration in each experiment. (Book 2, pp 978-979, 919-20) 2. Synthesis of benzalacetophenone by condensation of benzaldehyde with acetophenone and study its bromination and subsequent de-bromination. (Book 1, pp 242-247, Book 3 pp 361-365) 3. Synthesis of 2-chloro-4-bromo-6-iodoaniline from aniline. (Book 1, pp 292-299). 4. The epoxidation of benzalacetophenone to its epoxide and study its reactivity towards hydroxyl ion. (Book 3, pp 363-364). 5. Michael addition of aniline to benzalacetophenone. (Book 1, p 247).

	6. Conversion of benzalacetophenone to its oxime and its transformation to amide and oxazole derivatives. (Book 1, pp 242-247, Book 3 pp 361-365)

SEMESTER-III

I.K. GUJRAL PUNJAB TECHNICAL UNIVERSITY

Subject Code:	CHL504-18			
Subject Title:	ADVANCED CHARACTERIZATION TECHNIQUES			
Contact Hours:	L:4	T:0	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	This course will introduce the students to different techniques for characterisation of organic and inorganic materials. The emphasis will be on understanding crystal structure, morphology, microstructure, different types of phases present in a material, purity of the material.			

Details of the Course

Unit	Contents	Contact Hours
I.	X-Ray diffraction: Single crystal XRD and powder XRD, Bragg's diffraction law, Unit cell, space group, element of space group, particle size analysis using Scherer formula. Thermo-Analytical Methods: Theory, instrumental requirements and methodology for thermo gravimetric analysis (TGA), differential thermal analysis (DTA) and differential scanning calorimetry (DSC), applications.	12
II.	Scanning electron microscopy: Principle, Specimen Preparation, Replicas Various-application of SEM. Transmission electron microscopy : Instrumentation, Principle, Advantage, Difference between SEM and TEM.	10
III.	Chromatographic Methods: Classification of chromatographic methods according to separation and development procedure, Stationary phase, mobile phase, retention time. Gas chromatography: Physical components, Types of column and detector, Carrier gas, Applications, Inverse Gas chromatography, GC-MS: construction and working.	13
IV.	High performance liquid chromatography: Construction and working, Partition chromatography, Normal and reverse phase chromatography, Ion exchange chromatography, Isocratic and gradient elution. Gel permeation chromatography. Electrophoresis and electrochromatography.	10

6.	K. Tyagi, Mainak Roy, S. K. Kulshreshtha and S. Banerjee	Advanced Techniques for Materials Characterization	

Course Outcomes and Mapping

At the end of the course, the student will be able to

- CO1.** Understand the topography, morphology, composition, relationship between composition and material properties.
- CO2.** Learn the functioning of the X-ray diffractometer, about its components and would be able to determine the crystal structure of a material, find impurity in the material, different phases present in the mixture of compound qualitative as well as functionalities
- CO3.** Understand the instrumentation of TGA and also to calculate the weight loss with temperature, types of changes occurring in the material/substances during thermal bredding, enthalpy changes during heat treatment of a compound.
- CO4.** Apply the knowledge of various characterization techniques in material industries, metallurgy industries, electronic industries, civil Engineering.
- CO5.** Apply the quantitative and qualitative separation techniques in purification and its applications in food industry, pharmaceutical industry, purification, removal of pollutants, medicinal chemistry and essential oils.

Subject Title:	ADVANCED CHEMISTRY LAB-II			
Contact Hours:	L:0	T:0	P:6	Credits:3
Examination Hours:	6			
Objective(s):	To provide students practical knowledge and skills about various topics taught in theory class of physical chemistry			

Details of the Course

Unit	Contents
I	<p>Any 10 experiments to be performed out of the following:</p> <ol style="list-style-type: none"> 1. Preparation and study of Hardy – Schulze's rule for arsenious sulphide / Ferric hydroxide sols. 2. Verify the Freundlich adsorption isotherm for adsorption of CH_3COOH from its aqueous solution by activated charcoal. 3. Composing a phase diagram for three component system. 4. Determination of distribution coefficient of I_2 between CCl_4 and H_2O. 5. To show that benzoic acid dimerises in benzene by distribution method. 6. Determination of degree of hydrolysis of aniline hydrochloride at room temperature and hence hydrolysis constant of the salt. 7. Determination of pH of various mixtures of sodium acetate and acetic acid in aqueous solutions and hence determine the dissociation constant of the acid. 8. Determination of equilibrium constant of a reaction potentiometrically. 9. To construct a calibration curve for quinhydrone electrode and thus determine its standard reduction potential. 10. Determination of dissociation constant of a dibasic acid potentiometrically. 11. Determination of composition of KCl-KBr mixtures by potentiometric titration against silver nitrate solution. 12. Determination of acid and basic dissociation constants of an amino acid and hence the iso- electric point of the acid. 13. Titration of a mixture of Chloride and Iodide with AgNO_3 potentiometrically. 14. Titration of Phosphoric acid solution with NaOH using quinhydrone electrode. 15. Determination of Solute species in a phosphate mixture potentiometrically.
II	<p>Any 5 experiments to be performed out of the following:</p> <ol style="list-style-type: none"> 1. Separation of a mixture of amino acids using thin layer chromatography. 2. Isolation and quantitation of DNA from onion. 3. Separation of DNA using gel electrophoresis (agarose). 4. Isolation, detection, and quantitation of protein (casein) from milk. 5. Osmosis and diffusion through semipermeable membrane. 6. Estimation of DNA quantity using UV-Vis spectrophotometer. 7. DNA/ligand interaction (Scatchard plot) using UV-Vis spectrophotometer.

8. Serum albumin/ligand interaction using UV-Vis spectrophotometer

2. Findlay's Practical Physical Chemistry.
3. Safety-Scale Laboratory Experiments for Chemistry for Today, S L Seager and M R Slabaugh, Brooks/Cole Laboratory Series for General, Organic, and Biochemistry, VII edition, Brooks/Cole, 2010

Course Outcomes and Mapping

At the end of the course, the students will be able to

- CO1.** Emphasize the importance of different techniques used for titration viz. potentiometry, pHmetry and amperometry .
- CO2.** Correlate the theoretical and practical aspects and know about the limits of the experimental error.
- CO3.** Determine the various physical parameters for the various problems under study which in turn will enhance their problem solving and analytical skills.
- CO4.** Verify various laws studied in the theory part.

SEMESTER-IV

I.K. GUJRAL PUNJAB TECHNICAL UNIVERSITY

I.K. Gujral Punjab Technical University, Kapurthala

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

Course Name	M.Sc. Chemistry			
Subject Code:	CHL 512A-18			
Subject Title:	ADVANCED PHYSICAL CHEMISTRY			
Contact Hours:	L:4	T:0	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	The objective of this course is to provide an introduction to few advanced topics in physical chemistry like the chemistry of colloids, macromolecules and the latest electroanalytical techniques, focussing especially on their application part.			

Details of the Course

Unit	Contents	Contact Hours
I.	Colloidal State: Classification of colloids, charge and stability of colloidal dispersions, Hardy-Schulze Law, gold number, electrical properties of colloids, zeta-potential, electrophoresis and electroosmosis, emulsions and their classification, gels and their classification, thixotropy. Micelles, Surface active agents, Classification of surface active agents, Micellization, Hydrophobic interaction, Critical micellar concentration (cmc), Factors affecting the concentration of surfactants, Counter-ion binding of micelle, Thermodynamics of micellization, Applications.	11
II.	Polymers: Types of polymers, regular and irregular polymers, electrically conducting polymers, synthesis of polymers by chain and step reaction polymerization, physical properties of solid polymers (crystallinity, plasticity & elasticity) vulcanization of rubbers, molecular mass determination by osmometry, viscometry, light scattering and ultracentrifuge methods, number and mass average molecular masses, polymer solutions, factors affecting the solubility of polymers.	12
III.	Voltammetric Techniques-I: Linear sweep voltammetry; voltammetric electrodes, voltammograms. Hydrodynamic Voltammetry; concentration profiles at electrode surfaces, voltammetric currents, current voltage relationships, voltammograms for mixtures, Applications; voltammetric detectors, amperometric sensors, amperometric titrations. Differential pulse voltammetry.	10
IV.	Voltammetric Techniques-II: Polarography: principle, instrumentation and Applications, advantages and disadvantages of DME. Cyclic Voltammetry: Electrode used in cyclic voltametry, electrochemical mechanism, Eads mechanism (Adsorption mechanism), Butler-volmer equation, Reversible one electron transfer.	12

Course Outcomes and Mapping

At the end of the course, the student will be able to							
CO1.	Understand major aspects of chemical terminology related to surface science, polymers and electrode processes.						
CO2.	Develop insights in the micelle formation process and emphasize its application in daily life.						
CO3.	Know about polymers in detail.						
CO4.	Correlate various types of voltammetric techniques and their importance in sensing field.

I.K. GUJRAL PUNJAB TECHNICAL UNIVERSITY
DEPARTMENT OF CHEMICAL SCIENCES

DEPARTMENT OF CHEMICAL SCIENCES				
Course Name	M.Sc. Chemistry			
Subject Code:	CHL512E-18			
Subject Title:	GREEN CHEMISTRY			
Contact Hours:	L:4	T:0	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	1. To introduce the students of Master class about various concepts of green chemistry and its technologies. 2. The emphasis is on the synthesis of various entities using benign methods of green chemistry (their role and advantages).			

Details of the Course

Unit	Contents	Contact Hours
I.	Introduction to the Green Chemistry; Historical context: The Greening of Chemistry; Waste: Production, Problems, Prevention; Measuring and Controlling Environmental Performance; planning for the future for reducing carbon in the atmosphere; Emergence of Green chemistry and its environmental impact.	10
II.	Twelve Principles of green chemistry, concepts, importance and their applications with special emphasis on the use of alternative renewable feedstock (bio-fuels, biomass and their applications in green synthesis of various compounds); Use of innocuous reagents in natural processes; Alternative solvents; Design of the safer chemicals; Designing alternative reaction methodology; Minimizing energy consumption. Sustainable Polymers: The case of polylactide, using CO ₂ and other feedstock.	10
III.	Green reactions (Role, advantages and applications): Aqueous phase organic synthesis, Solvent less organic synthesis, Photochemical organic synthesis, PTC catalysed reactions, Microwave induced reactions, Enzymatic transformations, Sonication reactions & reactions in Ionic liquids.	13
IV.	Green reactions (Role & mechanism): Aldol condensation reaction (solid phase and Ionic liquid synthesis), Baeyer-Villiger oxidation (aqueous phase and solid phase synthesis), Baylis-Hillman Reaction (Microwave synthesis and Ionic liquid synthesis), Biginelli Reaction under Microwave irradiation, Cannizzaro Reaction under sonication, Dakin reaction under ultrasonication, Darzen reaction in PTC, Dieckmann condensation (Polymer supported synthesis), Diels-Alder reaction (in water, ionic liquid, MW and sonication), Photo-Fries rearrangement, Stille coupling in water and SC-CO ₂ , Ullmann reaction under sonication and in aqueous medium, Sonogashira reaction.	12

Organic Spectroscopy**Credits: 3-0-0****SECTION-I****General Features of Spectroscopy**

Introduction to spectroscopy, Nature of radiation, Energies corresponding to various kinds of radiation, Experimental techniques, intensities of spectral lines, Selection rules and transition moments, Line widths, Broadening

Nuclear Magnetic Resonance Spectroscopy:

PMR: Natural abundance of ^{13}C , ^{19}F and ^{31}P nuclei; The spinning nucleus, effect of external magnetic field, precessional motion and frequency, Energy transitions, Chemical shift and its measurements. Factors influencing chemical shift, anisotropic effect; Integrals of protons, proton exchange, spin-spin coupling- splitting theory, one, two and three bond coupling, virtual, long range and allylic coupling, magnitude of coupling constant; factors affecting the coupling constant, Chemical and magnetic equivalence, First and second order spectra, A2, AB, AX, AB2, AX2, A2B2 and A2X2 spin systems, Simplification of complex spectra (solvent effect, field effect, double resonance and lanthanide shift reagents).

SECTION-II**Nuclear Magnetic Resonance Spectroscopy:**

CW and FT NMR, Relaxation processes, T1 and T2 measurements, Applications of PMR in structural elucidation of simple and complex compounds.

^{13}C -NMR: Resolution and multiplicity of ^{13}C NMR, ^1H -decoupling, noise decoupling, broad band decoupling; Deuterium, fluorine and phosphorus coupling; NOE and origin of nuclear overhauser effect. off-resonance, proton decoupling, Structural applications of ^{13}C -NMR., pulse sequences, pulse widths, spins and magnetization vectors, DEPT, INEPT, Introduction to 2D-NMR, COSY, NOESY, HMBC and HSQC spectra

Mass Spectroscopy:

Introduction, methods of ionization EI & CI, Brief description of LD, FAB, SIMS, FD etc., Ion analysis methods (in brief), isotope abundance, Metastable ions, general rules predicting the fragmentation patterns.

Head 
 Department of Chemical Sciences
 IKG Punjab Technical University
 Kapurthala - 144603 Punjab (INDIA)

SECTION-III

Mass Spectroscopy:

Nitrogen rule, determination of molecular ion peak, index of H efficiency, fragmentation patterns for aliphatic compounds, amines, aldehydes, Ketons, esters, amides, nitriles, carboxylic acids ethers, aromatic compounds etc.

UV and Visible Spectroscopy of organic molecules:

Measurement techniques, Beer – Lambert's Law, molar extinction coefficient, oscillator strength and intensity of the electronic transition, Frank Condon Principle, Ground and first excited electronic states of diatomic molecules, relationship of potential energy curves to electronic spectra, Chromophores, auxochromes, blue shift, red shift, hypochromic and hyperchromic effect, $\sigma\text{-}\sigma^*$, $\pi\text{-}\pi^*$, $n\text{-}\pi^*$ transitions in organic molecules, Woodward rules for conjugated dienes and α , β -unsaturated carbonyl groups, extended conjugation and aromatic sterically hindered systems, Quantitative applications.

Books Recommended:

1. Pavia, Lampman & Kriz, Introduction to Spectroscopy.
2. C.N Banwell "Fundamentals of Molecular Spectroscopy".
3. R. M. Silverstein, G.C. Bassler, T.C. Morrill, "Spectrometric Identification of Organic Compounds".
4. W. Kemp, "Organic Spectroscopy".
5. D.H. Williams, I. Fleming, "Spectroscopic Methods in Organic Chemistry".
6. D.H. Williams, I. Fleming, "Spectroscopic Problems in Organic Chemistry", 1967.
7. R.C. Banks, E.R. Matjeka, G. Mercer, "Introductory Problems in Spectroscopy", 1980.
8. G.M. Barrow "Introduction to Molecular Spectroscopy".

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

CHP-407
Inorganic Chemistry

Inorganic Synthesis

1. Synthesis of Tris(Ethylenediamine)Nickel(II) Chloride and estimation of Ni(II).
2. Synthesis of Potassium Trisoxalatoferrate(III) Trihydrate $K_3[Fe(C_2O_4)_3] \cdot 3H_2O$ and estimation of anion.

Materials Synthesis

3. Synthesis of metal nanoparticles and studies of their photophysical properties.
4. Ligand directed synthesis of Quantum Dots and studies on the influence of surface directing agents.

Separation Techniques

5. To separate the mixture of metal ions using thin layer chromatography.
6. To perform the solvent extraction for the recovery of metal ions from aqueous medium.

Coordination Chemistry

7. Verification of relative position of ligands in spectrochemical series.
8. Calculation of $10Dq$ for the given metal complexes and assignment of transitions.

Inorganic Spectroscopy

9. Quantative determination of Cu(II) using spectroscopy.
10. Determination of stoichiometry of metal complex using Job plot method.
11. Determination of stoichiometry of metal complex using mole ratio method.
12. Determination of molar extinction coefficient of metal picrates.

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

Organic Synthesis

Techniques: (At least One Practical of Each Technique)

Crystallization, purification by Sublimation, Distillation, Fractional Distillation, Steam Distillation, Vacuum Distillation, Preparative chromatography Column Chromatography, TLC stains preparation and Thin Layer Chromatography

(Purity would be checked by m. p. and mixed m. p.).

2. Preparation of Derivatives: (Each Derivative of two Compounds) Oxime, 2, 4-DNP, Acetyl, Benzoyl, Semicarbazone, Anilide, Amide, Aryloxyacetic acid.

3. Preparations: Single Stage (Any 15)

- i) Cyclohexanone to Adipic acid
- ii) Benzophenone to Benzhydral
- iii) Anthracene to Anthraquinone
- iv) Chlorobenzene to 2,4-Dinitrochlorobenzene
- v) 2,4-Dinitrochlorobenzene to 2,4-Dinitrophenol
- vi) Acetoacetic ester to 1-Phenyl-3-methyl-5 pyrazolone
- vii) Benzaldehyde to Cinnamic acid
- viii) 4-Chlorobenzaldehyde to 4-Chlorobenzoic acid + 4-Chlorobenzyl alcohol
- ix) Benzene to β -Benzoyl propionic acid
- x) Benzaldehyde to Dibenzylidene acetone
- xi) p-Aminobenzoic acid to p-Chlorobenzoic acid
- xii) N,N-Dimethylaniline to 4-Formyl-N, N-dimethyl aniline
- xiii) Benzophenone to Benzpinacol
- xiv) p-Nitrotoluene to p-Nitrobenzoic acid
- xv) Anisole to 2,4-Dinitroanisole
- xvi) Phthalic anhydride to phthalimide
- xvii) Phthalimide to Anthranilic acid
- xviii) Acetanilide to p-Bromoacetanide
- xix) p-Bromoacetanide to p-Bromoaniline
- xx) m-Dinitrobenzene to m-Nitroaniline

Pattern of Practical Examination

Q - 1. Techniques: Distillation or Column or TLC	25 marks
Q - 2. Preparation / Derivative	25 marks
Q - 3. Interpretation of spectrum	10 marks
Q - 4. Lab Journal	05 marks
Q - 5. Oral	10 marks

Advanced Characterization Techniques

Credits: 3-0-0

SECTION-I

1. Modern Methods of Surfaces Analysis

5Hrs

Scanning electron microscopy: Principle, Specimen Preparation, Replicas Various-application of SEM

2. Transmission electron microscopy

6Hrs

Instrumentation, Principle, Advantage, Difference between SEM and TEM.

SECTION-II

3. Atomic Force Microscopy

10Hrs

Principle, Instrumentation, Advantage and disadvantage, scanning force microscopy, shear forces microscopy, lateral force microscopy and magnetic force microscopy.

4. X-Ray diffraction

7Hrs

Single crystal XRD and powder XRD, Bragg's diffraction law, Unit cell, space group, element of space group, particle size analysis using Scherer formula.

SECTION-III

5. Atomic Absorption Spectroscopy

7Hrs

General principles, Instrumentation, Hollow cathode lamp, Line width effect in atomic absorption, Cold vapor atomic absorption spectroscopy.

6. Thermo-Analytical Method

10Hrs

Theory, instrumental requirements and methodology for thermo gravimetric analysis (TGA), differential thermal analysis (DTA) and differential scanning calorimetry (DSC), applications

Reference

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

Electrochemical Techniques

Credits: 3-0-0

SECTION-I

1. Introduction to electrochemistry

15Hrs

Electrode potential, electrochemical cell and its types, Oxidation reduction reaction in electrochemical cell, Half-cell potential, standard hydrogen electrode, calculation of cell potential from electrode potential, Standard Weston cell, The Nernst equation, disproportion and comproportionation. Latimer diagram, Frost diagram, Oxidation reduction titrations

SECTION-II

2. Cyclic voltametry

15Hrs

Electrode used in cyclic voltametry, electrochemical mechanism, E_{ads} mechanism (Adsorption mechanism), Butler-volmer equation, Reversible one electron transfer. Linear sweep voltametry, differential pulse voltammetry, Application, Polarography: principle and Application of polarography.

SECTION-III

3. Conductometry

8Hrs

Electrolytic conductance, Measurement of conductance, Conductometric titration, Application, Oscillometry.

4. Potentiometric methods

7Hrs

Indicator electrode, Instrument for cell potential measurement, Application of potentiometric titration.

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

Analytical and Electrochemical Techniques**Credits: 0-0-3****A. Conductometry**

1. Find graphically the equivalent conductance at infinite dilution of weak acid (benzoic acid, succinic acid, acetic acid) and hence determine the thermodynamic dissociation constant of the weak acid.
2. Determine the equivalent conductance of strong electrolytes (KNO_3 , KCl) at several concentrations of its aqueous solution and verify the Onsager's equation.
3. Determine the equivalent conductance at infinite dilution of weak electrolytes (CH_3COOH , NH_4OH) in their aqueous solutions using Kohlraush law.
4. To determine relative strength of monochloroacetic and acetic acid by conductance measurements.

B. Potentiometry and pHmetry

5. To determine the dissociation constant of a dibasic acid (malonic acid)
6. The potentiometric titration of a mixture of Chloride and Iodide with AgNO_3 .
7. To determine the degree of hydrolysis of aniline hydrochloride and hence hydrolysis constant of the salt.
8. Determination of acid and basic dissociation constants of an amino acid and hence the iso-electric point of the acid.
9. Titration of Phosphoric acid solution with NaOH using quinhydrone electrode.
10. The Potentiometric Determination of Solute Species in a Phosphate Mixture
11. The Potentiometric Titration of Copper with EDTA.

C. Electrogravimetry and Coulometric titrations

12. Determination of Copper and Lead in a given sample of Brass Electrogravimetrically.
13. Determine coulometrically the concentration of Nickel and Cobalt from a given mixture.
14. The coulometric titration of cyclohexene.

D. Polarography and Stripping methods

15. The polarographic Determination of Copper and Zinc in the given sample of Brass.
16. Study the polarographic waves produced by dissolved oxygen.
17. Determine the half wave potential of Cd^{2+} , and Zn^{2+} ions in 0.1 M KCl solution.
18. Plot a polarogram for a mixture of Cd^{2+} , Zn^{2+} , and Mn^{2+} ions.
19. Determine of formula and the stability constant of complex formation of a metal ion complex.
20. Determine the amount of Copper and Zinc in tap water using DPP.

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

21. Apply stripping methods to determine the concentration of lead in tap water.

Amperometric titrations:

22. Amperometric titration of lead solution with potassium dichromate.

23. Amperometric titration of potassium sulphate solution with Lead nitrate solution.

24. Amperometric titration of nickel in solution with dimethyl glyoxime.

25. Determine transport number of silver and nitrate ions by Hittorf's method.

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

Physical Chemistry Lab

▪ **Error analysis and statistical error analysis**

Errors, types of errors, minimization and distribution of errors; precision, accuracy, and combination; statistical treatment of error analysis; student 't' test; null hypothesis; linear regression analysis; and curve fitting

▪ **Adsorption**

Adsorption isotherm; and surface tension-concentration relationship for solutions

▪ **Phase equilibria**

Congruent composition and temperature of a binary system; phase diagram of a three component system; and oscillating reaction

▪ **Chemical kinetics**

Rate and order of reaction (ester hydrolysis in homogeneous/heterogeneous media and oxidation of iodine with hydrogen peroxide/iodine clock); influence of temperature, concentration of reactant and catalyst, and ionic strength of the media on rate constant; primary salt effect on the kinetic of ionic reaction

▪ **Solutions**

Molecular weight and activity coefficient of non-volatile and non-electrolyte/electrolyte; degree of dissociation of weak electrolyte (deviation from strong electrolyte); and surface tension and viscosity

▪ **Polymers**

Viscosity and molecular weight of polymers

▪ **UV-Vis and fluorescence spectroscopy**

UV-Vis spectra of compounds and λ_{max} ; effect of solvents (hypochromic, hyperchromic, hypsochromic, and bathochromic shifts); estimation of molecular extinction coefficients; emission and excitation spectra, effect of solvent; and estimation of quantum yields

▪ **Electrochemistry**

(a) **Conductometry**: velocity constant, order of reaction and energy of activation; strength of strong and weak acid; effect of solvent on conductance; activity coefficients of ions (Debye Huckel's limiting law); and solubility product of sparingly soluble salt

(b) **Potentiometry**: formation constant and stoichiometry of a complex potentiometrically; strength of strong and weak acids (potentiometer/pH meter); temperature dependence of EMF of a cell; acid-base titration in non aqueous media (pH meter); activity and activity coefficients of an electrolyte; dissociation constant of acid in organic solvents (DMSO, DMF); and thermodynamic constant G, S, and H for the reaction by emf method

(c) **Polarimetry**: rate constant and enzyme kinetics for hydrolysis/inversion of sugar

Recommended books

CHL505
Chromatography and separation methods

Credits: 3-0-0

SECTION-I

1. Introduction to analytical separation, Principles of Adsorption Chromatography

2. Chromatographic Methods:

Classification of chromatographic methods according to separation and development procedure, Stationary phase, mobile phase, retention time.

SECTION-II

3. Gas chromatography:

Physical components, Types of column and detector, Carrier gas, Applications, Inverse Gas chromatography, GC-MS: construction and working.

SECTION-III

4. High performance liquid chromatography:

Construction and working, Partition chromatography, Normal and reverse phase chromatography, Ion exchange chromatography, Isocratic and gradient elution. Supercritical fluid chromatography: Mobile phase, Sample preparation, Drawback, Electrophoresis and electrochromatography

5. Gel permeation chromatography:

Working, Choice of Column: Organic column and aqueous column, Application, polydispersity index, Mark-Houwink equation.

6. Modern flash chromatography:

Advantage, comparison of column and flash chromatography

Reference

1. Chromatographic Methods, A. Braithwaite and F. J. Smith, 5th edn. Blackie Academic and rofessional, London, 1996.
2. Preparative chromatography, Henner Schmidt Traub, Wiely, 2005.
3. Principles of Instrumental Analysis, Skoog, Holler, Nieman, Fifth edition Thomson Books ,1998.

CHP507
Biophysical Chemistry Lab

- Separation of a mixture of amino acids using thin layer chromatography
- Isolation and quantitation of DNA from onion
- Separation of proteins/DNA using size-exclusion chromatography (SEC)
- Separation of DNA using gel electrophoresis (agarose)
- Isolation, detection, and quantitation of protein (casein) from milk
- Separation of proteins using polyacrylamide gel electrophoresis (SDS-PAGE)
- Osmosis and diffusion through semipermeable membrane
- Estimation of DNA quantity using UV-Vis spectrophotometer
- DNA/ligand interaction (Scatchard plot) using UV-Vis spectrophotometer
- Melting curves of DNA using UV-Vis spectrophotometer
- Serum albumin/ligand interaction using UV-Vis spectrophotometer
- Study of DNA conformation using circular dichroism spectroscopy
- Thermal stability and conformation of proteins using circular dichroism spectroscopy

Books recommended

Multi-step Organic Synthesis

The use of multi-step approach in organic synthesis and applications of spectroscopic techniques to determine the structures of the compounds prepared.

EXPERIMENTS

1. Synthesize (a) 2,4-dinitro-1-chlorobenzene from chlorobenzene, (b) mixture of *o*- and *p*-nitrophenols from phenol and (c) *p*-nitroacetanilide from acetanilide and make comparison of the reactivity of various substrates and reaction conditions used for performing nitration in each experiment. (Book 2, pp 978-979, 919-20)
2. Synthesis of 2-chloro-4-bromo-6-iodoaniline from aniline. (Book 1, pp 292-299)
3. Synthesis of benzalacetophenone by condensation of benzaldehyde with acetophenone and study its bromination and subsequent de-bromination. (Book 1, pp 242-247, Book 3 pp 361-365)
4. The epoxidation of benzalacetophenone to its epoxide and study its reactivity towards hydroxyl ion. (Book 3, pp 363-364).
5. Michael addition of aniline to benzalacetophenone. (Book 1, p 247)
6. Conversion of benzalacetophenone to its oxime and its transformation to amide and oxazole derivatives. (Book 1, pp 242-247, Book 3 pp 361-365)
7. Synthesis of anthranilic acid from phthalimide. (Book 2, pp 898-899)
8. Synthesis of *p*-aminobenzenesulfonamide. (Book 1, pp 275-289)
9. Synthesis of Methyl *n*-pentyl ketone from ethyl acetoacetate. (Book 2, pp 620-621)
10. Synthesis of triphenylcarbinol from bromobenzene. (Book 2, pp 540-541)

Books:

1. An Introduction to Modern Experimental Organic Chemistry, R.M. Roberts, Gilbert, L. B. Rodewald and A.S. Wingrove. Holt, Rinehart and Winston Inc., J. C New York 1969.
2. Vogel's Text Book of Practical Organic Chemistry, 5th Edition.
3. Laboratory Experiments in Organic Chemistry, R. Adams, J.R. Johnson

Course Outcomes and Mapping

At the end of the course,

- CO1.** Students will acquire basic proficiency in reading & listening, writing and speaking skills.
- CO2.** Students will be able to understand spoken and written English language, particularly the language of their chosen technical field.
- CO3.** They will be able to converse fluently and produce on their own clear and coherent texts.
- CO4.** Students will become proficient in professional communication such as interviews, group discussions, office environments, important reading skills as well as writing skills

6	Liz Hamp-Lyons and Ben Heasley	Study Writing	Cambridge University Press. 2006.

Course Outcomes and Mapping

At the end of the course,

- CO1.** Students will acquire basic proficiency in LSRW skills- listening, speaking, reading, and writing.
- CO2.** To develop their vocabulary so that they can understand spoken and written English language, particularly the language of their chosen technical field
- CO3.** To introduce students to the skills and strategies of reading and writing by identifying organizational patterns, spotting classification systems and understanding associations between ideas through study of literary texts.
- CO4.** They will be able to converse fluently and produce on their own clear and coherent texts.
- CO5.** To improve the employability of students and make them proficient in professional communication through understanding of career documents; job interviews; group discussions; internal communication in office environments etc.

Subject Code:	BHCP117-19
Subject Title:	INORGANIC CHEMISTRY LAB-II
Contact Hours:	L:0 T:0 P:4 Credits:2
Examination Duration (hours)	3
Objective(s):	The objective of this course is to provide practical knowledge regarding salt analysis.

Details of the Course

Unit	Contents
I	<p>Identification of cations and anions in a mixture which may contain combinations of acid ions. These must contain interfering acid anions and one, the insoluble.</p> <p>(a) Special Tests for Mixture of Anions</p> <p>(i) Carbonate in the presence of sulphate. (ii) Nitrate in the presence of nitrite (iii) Nitrate in the presence of bromide and iodide. (iv) Nitrate in the presence of chlorate. (v) Chloride in the presence of bromide and iodide. (vi) Chloride in the presence of bromide. (vii) Chloride in the presence of iodide. (viii) Bromide and iodide in the presence of each other and of chloride. (ix) Iodate and iodide in the presence of each other. (x) Phosphate, arsenate and arsenite in the presence of each other. (xi) Sulphide, sulphite, thiosulphate and sulphate in the presence of each other. (xii) Borate in the presence of copper and barium salts. (xiii) Oxalate in the presence of fluoride. (xiv) Oxalate, tartrate, acetate, citrate in the presence of each other.</p> <p>(b) Separation and Identification of Cations in Mixtures</p> <p>(i) Separation of cations in groups. (ii) Separation and identification of Group I, Group II (Group IIA and IIB), Group III, Group IV, Group V and Group VI cations.</p> <p>(c) Identification of Cations Including Less Familiar Elements by Spot Tests Assisted by Group Analysis (3 cations).</p>

Course Outcomes and Mapping

At the end of the course, the student will be able to							
CO1.	Understand the concept of qualitative analysis.						
CO2.	Learn to identify present cations and anions through qualitative analysis of various metal ions/cations and anions.						
CO3.	Understand the various techniques/principles involved in the qualitative analysis of mixtures in presence or absence of interfering ions.						
CO4.	Learn to separate and identify less familiar ions through qualitative analysis.

Subject Title:	PHYSICAL CHEMISTRY LAB-I			
Contact Hours:	L:0	T:0	P:4	Credits:2
Examination Duration (hours)	3			
Objective(s):	To provide students practical knowledge and skills about various topics taught in theory class of physical chemistry, which in turn will enhance their problem solving and analytical skills.			

Details of the Course

Unit	Contents
I	Surface tension measurements. a) Determine the surface tension by (i) drop number (ii) drop weight method. b) Study the variation of surface tension of detergent solutions with concentration.
II	Viscosity measurement using Ostwald's viscometer. a) Determination of viscosity of aqueous solutions of (i) polymer (ii) ethanol and (iii) sugar at room temperature. b) Study the variation of viscosity of sucrose solution with the concentration of solute.
III	Indexing of a given powder diffraction pattern of a cubic crystalline system.
IV	pH metry a) Study the effect on pH of addition of HCl/NaOH to solutions of acetic acid, sodium acetate and their mixtures. b) Preparation of buffer solutions of different pH; (i) Sodium acetate-acetic acid (ii) Ammonium chloride-ammonium hydroxide c) pH metric titration of (i) strong acid vs. strong base, (ii) weak acid vs. strong base. d) Determination of dissociation constant of a weak acid.

Subject Title:	SPECTROSCOPY			
Contact Hours:	L:3	T:1	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	To teach the fundamental concepts of Spectroscopy and their applications.			

Details of the Course

Unit	Contents	Contact Hours
I	Introduction, interaction of electromagnetic radiation with molecules; various types of spectroscopy; absorption and emission spectroscopy; Born-Oppenheimer approximation. Vibrational and IR spectroscopy: Classical equation of vibration, computation of force constant, amplitude of diatomic molecular vibrations, anharmonicity, Morse potential, dissociation energies, fundamental frequencies, overtones, hot bands, degrees of freedom for polyatomic molecules, modes of vibration, Fundamental and non-fundamental molecular vibrations; concept of group frequencies. Vibration-rotation spectroscopy: diatomic vibrating rotator, P, Q, R branches.	12
II	IR absorption positions of O, N and S containing functional groups; Effect of H-bonding, conjugation, resonance and ring size on IR absorptions; Fingerprint region and its significance; application in functional group analysis. Rotation spectroscopy: Selection rules, intensities of spectral lines, determination of bond lengths of diatomic and linear triatomic molecules, isotopic substitution. Raman spectroscopy: Qualitative treatment of Rotational Raman effect; Effect of nuclear spin, Vibrational Raman spectra, Stokes and anti-Stokes lines; their intensity difference, rule of mutual exclusion.	11
III	Electronic spectroscopy and UV spectroscopy: Franck-Condon principle, electronic transitions, singlet and triplet states, fluorescence and phosphorescence, dissociation and predissociation,	10

Contact Hours:	L:0	T:0	P:4	Credits:2
Examination Duration (hours)	3			
Objective(s):	The objective of this course is to provide practical knowledge and illustrative experiments regarding synthesis, separation and purification of organic compounds.			

Details of the Course

Unit	Contents
I	Functional group detection using spectroscopy techniques Application of IR and UV spectroscopy in functional groups characterization of various compounds containing different functional groups (20 compounds).
II	One step synthesis 1. Acetylation of the following compounds using conventional method or using green approach (a) amines (aniline, o-, p-toluidines) (b) phenols (β -naphthol, 2-amino phenol, salicylic acid) 2. Benzoylation of the following compounds (a) amines (aniline, o-, p- toluidines) (b) phenols (β -naphthol, resorcinol) by Schotten-Baumann reaction. 3. Oxidation of ethanol/ isopropanol (Iodoform reaction). 4. Bromination of any one of the following: (a) Acetanilide by conventional methods (b) Acetanilide using green approach (Bromate-bromide method) 5. Nitration of any one of the following: (a) Acetanilide/nitrobenzene by conventional method (b) Salicylic acid by green approach (using ceric ammonium nitrate). The above derivatives should be prepared using 0.5-1.0 g of the organic

III	Fries rearrangement, Diels-Alder Reaction. Microwave assisted solid state reactions: Deacetylation, Deprotection. Saponification of esters, Alkylation of reactive methylene compounds, synthesis of nitriles from aldehydes. 3. Ultrasound assisted reactions: Esterification, saponification, substitution reactions, Alkylations, oxidation, reduction, coupling reaction, Cannizzaro reaction.	
IV	4. Selective methylation of active methylene group using dimethylcarbonate, Free Radical Bromination; Biocatalysis in organic syntheses. Future Trends in Green Chemistry Oxidation reagents and catalysts; Biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; oncovalent derivatization; Green chemistry in sustainable development	11

Course Outcomes and Mapping

At the end of the course, the student will be able to							
CO1.	Understand the fundamental concepts of green chemistry						
CO2.	Learn the use of these fundamental principles for the designing of various chemical reactions						
CO3.	Understand the various techniques available and their present applications in different green reactions						
CO4.	Learn about the various applications of the green chemistry						
CO5.	Understand the various expected future trends of the green chemistry

Subject Code:	BHCL214-19			
Subject Title:	POLYMER CHEMISTRY			
Contact Hours:	L:3	T:1	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	This course will equip students with the knowledge concerning the fundamentals in the basic areas of Polymer Chemistry.			

Details of the Course

Unit	Contents	Contact Hours
I	<p>Introduction and history of polymeric materials: Different schemes of classification of polymers, Polymer nomenclature, Molecular forces and chemical bonding in polymers, Texture of Polymers.</p> <p>Functionality and its importance: Criteria for synthetic polymer formation, classification of polymerization processes, Relationships between functionality, extent of reaction and degree of polymerization. Bifunctional systems, Poly-functional systems.</p>	10
II	<p>Kinetics of Polymerization: Mechanism and kinetics of step growth, radical chain growth, ionic chain (both cationic and anionic) and coordination polymerizations, Mechanism and kinetics of copolymerization, polymerization techniques.</p> <p>Crystallization and crystallinity: Determination of crystalline melting point and degree of crystallinity, Morphology of crystalline polymers, Factors affecting crystalline melting point.</p> <p>Nature and structure of polymers-Structure Property relationships.</p>	12
III	<p>Determination of molecular weight of polymers (M_n, M_w, etc) by end group analysis, viscometry, light scattering and osmotic pressure methods. Molecular weight distribution and its significance. Polydispersity index.</p> <p>Glass transition temperature (T_g) and determination of T_g Free volume theory, WLF equation, Factors affecting glass transition temperature (T_g).</p> <p>Polymer Solution – Criteria for polymer solubility, Solubility parameter, Thermodynamics of polymer solutions, entropy, enthalpy, and free energy change of mixing of polymers solutions, Flory- Huggins theory, Lower and Upper critical solution temperatures.</p>	11
IV	Properties of Polymers (Physical, thermal, Flow & Mechanical	12

Course Name	B.Sc. (Honours) Chemistry			
Subject Code:	BHCL304-19			
Subject Title:	ANALYTICAL CLINICAL BIOCHEMISTRY			
Contact Hours:	L:3	T:1	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	Basic understanding of the structures, properties and functions of carbohydrates, lipids and proteins and the analysis of biochemistry of diseases using Blood and Urine.			

Details of the Course

Unit	Contents	Contact Hours
I	Carbohydrates: Classification, Types and Biological importance of Monosaccharides, Disaccharides, Polysaccharides and Glycosaminoglycans. Metabolism, Cellular currency of energy (ATP), Glycolysis, Alcoholic and Lactic acid fermentations, Krebs cycle. Isolation and characterization of polysachharides.	10
II	Proteins: Classification, biological importance; Primary and secondary and tertiary structures of proteins- α -helix and β -pleated sheets, Isolation, characterization and denaturation of proteins. Enzymes: Nomenclature, classification, Characteristics (mention of Ribozymes), Active site, Mechanism of enzyme action, Stereospecificity of enzymes, Coenzymes and cofactors, Enzyme inhibitors, effect of pH, temperature on enzyme activity, enzyme inhibition. Biocatalysis.	11
III	Lipids: Classification. Biological importance of triglycerides and phosphoglycerides and cholesterol; Lipid membrane, Liposomes and their biological functions and underlying applications. Lipoproteins: Properties, functions and biochemical functions of steroid hormones. Biochemistry of peptide hormones. Nucleic Acids: Structure of DNA (Watson-Crick model) and RNA, Genetic Code, Biological roles of DNA and RNA: Replication, Transcription and Translation, Introduction to Gene therapy.	11

IV	<p>Biochemistry of disease: A diagnostic approach by blood/ urine analysis.</p> <p>Blood: Composition and functions of blood, blood coagulation. Blood collection and preservation of samples. Estimation and interpretation of data for blood sugar, urea, creatinine, cholesterol and bilirubin. Normal constituents of blood and their estimation and variation in pathological conditions - urea, uric acid, creatinine, glucose, bilirubin, total protein, albumin/globulin ratio. Lipid profile – cholesterol, triglycerides, lipoproteins - HDL and LDL.</p> <p>Urine: Collection and preservation of samples. Normal composition of urine – volume, pH, colour, specific gravity. Constituents-urea, uric acid, creatinine, pigment. Abnormal constituents – glucose, albumin, ketone bodies, variations in urea, creatinine, pigments and their clinical significance in brief. Uremia, hyperuricemia, porphyria and factors affecting nitrogen balance.</p>	13

Course Outcomes and Mapping

At the end of the course, the student will be able to

- CO1. Understand the structure & functions of Biomolecules.
- CO2. An advanced understanding and applied knowledge of the theory of clinical biochemistry.
- CO3. A critical understanding of how biochemical investigations are employed to develop a clinical diagnosis.
- CO4. To gain knowledge and understanding of clinical disorders.
- CO5. To gain knowledge of biological samples and their collection procedures.

Course Name	B.Sc. (Honours) Chemistry			
Subject Code:	BHCL305-19			
Subject Title:	INDUSTRIAL CHEMICALS AND ENVIRONMENT			
Contact Hours:	L:3	T:1	P:0	Credits:4
Examination Duration (hours)	3			
Objective(s):	The objective of this course is to make students aware about the concepts of different gases and their industrial production, uses, storage and hazards; Manufacturing, applications, analysis and hazards of the Inorganic Chemicals, Preparation of Ultra-Pure metals for semiconducting technology, Air and Water pollution, control measures for Air and Water Pollutants, Catalyst and Biocatalyst, Energy and Environment.			

Details of the Course

Unit	Contents	Contact Hours
I	Industrial Gases and Inorganic Chemicals <i>Industrial Gases:</i> Large scale production, uses, storage and hazards in handling of the following gases: oxygen, nitrogen, argon, neon, helium, hydrogen, acetylene, carbon monoxide, chlorine, fluorine, sulphur dioxide and phosgene. <i>Inorganic Chemicals:</i> Manufacture, application, analysis and hazards in handling the following chemicals: hydrochloric acid, nitric acid, sulphuric acid, caustic soda, common salt, borax, bleaching powder, sodium thiosulphate, hydrogen peroxide, potash alum, chrome alum, potassium dichromate and potassium permanganate. <i>Industrial Metallurgy:</i> Preparation of ultrapure metals for semiconductor technology.	12

Head
Department of Chemical Sciences
IKG Punjab Technical University
Kapurthala - 144603 Punjab (INDIA)

II	Environment and its segments Ecosystems. Biogeochemical cycles of carbon, nitrogen and sulphur. <i>Air Pollution:</i> Major regions of atmosphere. Chemical and photochemical reactions in atmosphere. Air pollutants: types, sources, particle size and chemical nature; Photochemical smog: its constituents and photochemistry., Major sources of air pollution and Pollution by SO ₂ , CO ₂ , CO, NO _x , and H ₂ S gases. Methods of estimation of CO, NO _x , SO _x and control procedures. Effects of air pollution on living organisms and vegetation. Greenhouse effect and Global warming, Ozone depletion by oxides of nitrogen, chlorofluorocarbons and Halogens, removal of sulphur from coal.	11
III	Water Pollution Hydrological cycle, water resources, aquatic ecosystems, Sources and nature of water pollutants, Techniques for measuring water pollution, Impacts of water pollution on hydrological and ecosystems. Water purification methods. Effluent treatment plants (primary, secondary and tertiary treatment). Industrial effluents from the following industries and their treatment: electroplating, textile, tannery, dairy, petroleum and petrochemicals, agro, fertilizer, etc. Sludge disposal. Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion exchange). Water quality parameters for waste water, industrial water and domestic water.	10
IV	Energy & Environment Sources of energy: Coal, petrol and natural gas. Nuclear Fusion / Fission, Solar energy, Hydrogen, geothermal, Tidal and Hydel, etc. Nuclear Pollution: Disposal of nuclear waste, nuclear disaster and its management. E-waste and its Management Biocatalysis Introduction to biocatalysis: Importance in "Green Chemistry" and Chemical Industry.	12

Course Outcomes and Mapping

At the end of the course, the student will be able to understand

- CO1.** different toxic gases and their toxicity hazards, Safe design systems for large scale production of Industrial gases.
- CO2.** manufacturing processes, handling and storage of inorganic chemicals and knowledge of Hazardous effects of the inorganic chemicals on human beings and vegetation.
- CO3.** the requirement of ultra-pure metals for the semiconducting technologies.
- CO4.** different sources, effects and control measures of air, water pollutants, water quality parameters, different methods of Treatment of effluents from different sources.
- CO5.** different sources of energy, source of nuclear waste and its disposal. Use of biocatalyst in chemical industries.

Contact Hours:	L:0	T:0	P:4	Credits:2
Examination Duration (hours)	3			
Objective(s):	The objective of this course is to provide practical knowledge and illustrative experiments regarding synthesis, separation, purification and characterization of organic compounds.			

Details of the Course

Contents
Organic Preparations <ol style="list-style-type: none">1. Selective reduction of 1,3-dinitrobenzene to <i>m</i>-nitroaniline.2. Reduction of <i>p</i>-nitrobenzaldehyde by sodium borohydride.3. Hydrolysis of amides and esters.4. Semicarbazone of any one of the following compounds: acetone, ethyl methyl ketone, cyclohexanone, benzaldehyde.5. S-Benzylisothiuronium salt of one each of water-soluble and water insoluble acids (benzoic acid, oxalic acid, phenyl acetic acid and phthalic acid).6. Aldol condensation using either conventional or green method.7. Benzil-Benzilic acid rearrangement.8. Solvent-free Cannizzaro reaction of benzaldehyde.9. Preparation of fluorescein from resorcinol and phthalic anhydride.10. Synthesis of 2-phenylindole using Fischer Indole synthesis reaction. <p>The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization, melting point determination. All reactions in the following experiments are to be monitored by thin layer chromatography (TLC) and characteristic data (UV-visible/fluorescence, IR, NMR, MS) is to be explained.</p>

Course Outcomes and Mapping

At the end of the course, the student will be able to							
CO1.	explain the fundamentals of analytical chemistry and steps of a characteristic analysis						
CO2.	estimate kinds of errors in chemical analysis.						
CO3.	identify quality of experimental measurements.						
CO4.	interpret the sources of random errors and effects of random errors on analytical results.						
CO5.	Familiarise with various analytical techniques and compare them.

I.K. GUJRAL PUNJAB TECHNICAL UNIVERSITY DEPARTMENT OF CHEMICAL SCIENCES	
Course Name	B.Sc. (Honours) Chemistry
Subject Code:	BHCL315-19
Subject Title:	NANOCHEMISTRY
Contact Hours:	L:3 T:1 P:0 Credits:4
Examination Duration (hours)	3
Objective(s):	<ul style="list-style-type: none"> To learn the basic concepts of Nanochemistry and changes of chemical and physical properties due size reduction. To familiarize about the different chemical methods of synthesis, characterization, and different applications of nanomaterials

Details of the Course

Unit	Contents	Contact Hours
I	Introduction to Nanomaterials: History-Feynman's hypothesis- scales of nanosystems- Moore's law, Classification of nanomaterials based on dimensions – one dimensional (1D), two dimensional (2D) and three dimensional (3D) nanomaterials, quantum dots, quantum wires, quantum core/shell structures, Different types of nanomaterials: Synthesis, properties and applications of fullerenes, carbon nanotubes and quantum dots, self-assembled monoayers, monolayer protected metal nanoparticles.	10
II	<p>Chemical Routes for Synthesis of Nanomaterials: Chemical precipitation and co-precipitation; Sol-gel synthesis; Microemulsions or reverse micelles; Solvothermal synthesis; Thermolysis routes, Microwave heating synthesis; Sonochemical synthesis; Photochemical synthesis; Synthesis in supercritical fluids.</p> <p>Organic nanoparticles: Size and shape control of nanoparticles and their characterization; inorganic-organic hybrid nanoparticles; Nanopolymers: Preparation and characterization of diblock Copolymer based nanocomposites; Applications of Nanopolymers in Catalysis.</p>	13
III	Optical characterization: Absorption and photoluminescence (PL & PLE) spectroscopies, steady-state vs. fast spectroscopy, dynamic light scattering, Structural characterization: XRD, SEM, STEM, TEM, AFM, Deviations between bulk and near-surface crystal structures.	12
IV	Chemistry of small surfaces: Curvature and neighboring-charge effects on chemical reactivity and equilibria (pKa's, redox potentials), Applications in structural materials, lighting, energy conversion (Solar Cells) and catalysis applications, Environmental, safety, and ethical aspects of nanotechnology.	10

Course Name	B.Sc. (Honours) Chemistry			
Subject Code:	BHCP318-19			
Subject Title:	ORGANIC CHEMISTRY LAB-IV			
Contact Hours:	L:0	T:0	P:4	Credits:2
Examination Duration (hours)	3			
Objective(s):	The objective of this course is to provide practical knowledge and illustrative experiments regarding study, estimation and isolation of bioorganic compounds.			

Details of the Course

S. No.	Contents
1.	Estimation of glycine by Sorenson's formalin method.
2.	Study of the titration curve of glycine.
3.	Estimation of proteins by Lowry's method.
4.	Study of the action of salivary amylase on starch at optimum conditions.
5.	Effect of temperature on the action of salivary amylase.
6.	Saponification value of an oil or a fat.
7.	Determination of Iodine number of an oil/ fat.
8.	Isolation and characterization of DNA from onion/ cauliflower/peas.
	Synthesis of Nanoparticles and their applications
	(i) Green synthesis of silver nanoparticles using plant extract.
	(ii) Preparation of Chitosan Nanoparticles and characterization using FTIR.
	(iii) Synthesis of ZnO nanoparticles through non-aqueous route.
	(iv) Synthesis of copper nanoparticles.
	Application of synthesized nanoparticles in any two organic transformations / synthesis.

RESEARCH METHODOLOGY

Course code

L T P C

PHAS - 901

3 1 0 4

1. Introduction to Research:- *Kothari + Notes*

Objectives of research, motivation in research, types of research, significance of research, research methods vs methodology, research process in flow chart, criteria of good research, problems encountered by researchers in India.

2. Thinking Processes: Notes

Role of thinking in research, levels and styles of thinking; common-sense and scientific thinking; examples.

3. Problem solving: ?

Problem solving strategies – reformulation or rephrasing, techniques of representation, logical thinking, division into sub-problems, verbalization, awareness of scale; importance of graphical representation; examples

4. Experimental and modeling skills:

Census and sample survey, sampling procedure, important scaling techniques, methods of data collection, estimation and reduction of random errors; detection and elimination of systematic errors; guidelines for constructing questionnaire, Scientific method; role of hypothesis in experiment; hypothesis testing; F test, t test, Chi Square test, use of ANOVA; Types of models; the art of making approximations; problem representation; logical reasoning; mathematical skills; techniques of numerical simulation.

5. Problem finding and literature survey:

*→ Notes (Research Design)
Kothari*

Information gathering – reading, searching and documentation; types, attributes and sources of research problems; problem formulation, relative

importance of various forms of publications, choice of journal and reviewing process, Difference between publishing and patenting.

6. Chemdraw and documentation

Difference between TEX and LATEX, basics of using latex, latex input files, input file structures, layout of the document, titles, chapter and sections, cross references, foot note, environments, typesetting, building blocks of a mathematical formula, matrices, tables, including encapsulated postscript graphics, bibliography, downloading and working of CHEMDRAW software

7. Data And its Presentation

Introduction to origin, basics of importing and exporting data, working with Microsoft excel, graphing, statistics in origin, hypothesis testing, power and sample size, basic linear regression and curve fitting.

8. Statistical Analysis of Data

Error Analysis and Basic Statistics Measuring errors, uncertainties, parent and sample distributions, mean and standard deviation of distribution, types of probability distribution, instrumental and statistical uncertainties, propagation of errors, specific error formulas, method of least square fitting.

9. Multivariate analysis:

Multiple regression, multiple discriminant analysis, multiple analysis of variance, canonical correlation analysis, Factor analysis cluster analysis, path analysis. Computational techniques.

10. Stress management, Time management, Interpersonal skills, professional ethics:

Psychological phases of a PhD process, stress points, Managing self, teamwork, sense of humor, Plagiarism and research ethics

Course structure

- The course comprises of six modules listed in table below. Each module has 4-5 units.

Modules	Unit title	Teaching hours
Theory		
RPE 01	Philosophy and Ethics	4
RPE 02	Scientific Conduct	4
RPE 03	Publication Ethics	7
Practice		
RPE 04	Open Access Publishing	4
RPE 05	Publication Misconduct	4
RPE 06	Databases and Research Metrics	7
	Total	30

Syllabus in detail

THEORY

- RPE 01: PHILOSOPHY AND ETHICS (3 hrs.)**
 1. Introduction to philosophy: definition, nature and scope, concept, branches
 2. Ethics: definition, moral philosophy, nature of moral judgements and reactions
- RPE 02: SCIENTIFIC CONDUCT (5hrs.)**
 1. Ethics with respect to science and research
 2. Intellectual honesty and research integrity
 3. Scientific misconducts: Falsification, Fabrication, and Plagiarism (FFP)
 4. Redundant publications: duplicate and overlapping publications, salami slicing
 5. Selective reporting and misrepresentation of data
- RPE 03: PUBLICATION ETHICS (7 hrs.)**
 1. Publication ethics: definition, introduction and importance
 2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
 3. Conflicts of interest
 4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types
 5. Violation of publication ethics, authorship and contributorship
 6. Identification of publication misconduct, complaints and appeals
 7. Predatory publishers and journals

PRACTICE

- RPE 04: OPEN ACCESS PUBLISHING(4 hrs.)**

1. Open access publications and initiatives
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies
3. Software tool to identify predatory publications developed by SPPU
4. Journal finder / journal suggestion tools viz. JANE, Elsevier Journal Finder, Springer Journal Suggester, etc.

• **RPE 05: PUBLICATION MISCONDUCT (4hrs.)**

A. Group Discussions (2 hrs.)

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest
3. Complaints and appeals: examples and fraud from India and abroad

B. Software tools (2 hrs.)

Use of plagiarism software like Turnitin, Urkund and other open source software tools

• **RPE 06: DATABASES AND RESEARCH METRICS (7hrs.)**

A. Databases (4 hrs.)

1. Indexing databases
2. Citation databases: Web of Science, Scopus, etc.

B. Research Metrics (3 hrs.)

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score
2. Metrics: h-index, g index, i10 index, altmetrics

Annexure-A

01- Advanced Organic Chemistry

LTP-3-0-0

Total Hours: 45

1. Pericyclic Reactions

Molecular orbital symmetry, Frontier orbital of ethylene, 1, 3- butadiene, 1, 3, 5- hexatriene and allyl system. Classification of pericyclic reactions. Woodward-Hoffmann diagrams. FMO and PMO approach. Electrocyclic reactions, $4n$, $4n+2$ and allyl systems. Cycloaddition – antarafacial and suprafacial additions, $4n$ and $4n+2$ systems, 2+2 addition of ketenes, 1,3 dipolar cycloadditions and cheletropic reactions. Sigmatropic rearrangements–suprafacial and antarafacial shifts of Hydrogen, sigmatropic shifts involving carbon moieties, 3, 3- and – sigmatropic rearrangements. Claisen, Cope and aza-Cope rearrangements, ene reaction.

2. Metal Salt Catalysis

(a). Fundamental reaction steps of transition metal catalysed reaction.

oxidative-addition reactions, elimination reactions, cleavage of C-H bonds, migration reaction, insertion reaction.

(b). Homo/heterogeneous catalysis by transition metal complexes.

Hydrogenation reaction, alkene isomerization, hydrosilylation and hydroboration reaction, alkene hydrogenation, reaction of CO and hydrogen, hydroformylation of unsaturated compounds, carbonylation reactions, C-C cross coupling and related reaction, reaction of conjugated dienes, reaction of alkynes, , alkene and alkyne metathesis, phase transfer catalysis,

(c). C-H activation using metal salts, Suzuki reaction, Heck reaction, Negishi coupling, Stille reaction, Sonogashira coupling reactions.

3. Cycloaddition reaction in Organic Synthesis

Cycloaddition reactions:- Brief introduction, types of cycloaddition reactions, diene , dienophiles, intra and inter-molecular Diels Alder reaction (Lewis acid catalysed and uncatalysed), , brief introduction to diene and heterodiene and their cycloaddition reaction (2+2 and 4+2) with dienophiles, regiochemistry and stereochemistry in Diels alder reaction, poverov reaction, aza-diels alder reactions, normal and inverse electron demand cycloaddition reactions, heterodienophiles , Hetero Diels alder reactions (general introduction), 1,3-dipolar cycloaddition reactions

4. Multicomponent cycloaddition reactions, brief introduction to transition metal salts catalysed reactions, brief introduction to (m+o), (m+n+o) type reactions with emphasis on 3+2; 4+3, 2+2, 4+2, 5+2, 2+2+2,3+2+2, 5+2+1 types of reactions.

Books

1. Advanced Inorganic Chemistry F.A Cotton 6th addition chapter 21 and 22, p. 1167-1294.
2. Cycloaddition reactions in organic synthesis by W. Carruthers in the Tetrahedron Organic Chemistry Series, edited by J. E. Baldwin and P. D. Magnus, Pergamon Press, Oxford, 1990.
3. S.M. Mukherji and S. P. Singh, Reaction Mechanism in Organic Chemistry.
4. Inorganic Chemistry:Principles of Structure and Reactivity by James E. Huheey, Ellen A. Keiter, Richard L. Keiter
5. Some Modern Methods of Organic Synthesis by W Carruthers, Cambridge University Press.
6. Smith M B , March J March's Organic Chemistry 5th ed (2001)(2103s), Wiley, New York.

02 Medicinal Chemistry

No. of Lectures LTP-3-0-0

- CNS Active Drugs:** **CNS Depressants:** Hypnotics and sedatives: Barbiturates, Non-barbiturates, Amides and Imides, Glutethimide, Benzodiazepines, Aldehydes and derivatives, Methaqualone and other miscellaneous agents. **Anticonvulsants:** Barbiturates, Hydantoin, Oxazolidinediones, Succinimides, Benzodiazepines, Phenacemide, Glutethimide. **CNS-stimulants & Psychoactive drugs:** Analeptics, Purines, Psychomotor stimulants, Sympathomimetics, Monamine oxidase inhibitors, Tricyclic antidepressants, Miscellaneous psychomotor stimulants. Hallucinogens (**Psychodelics**, **Psychomimetics**): Indolethylamines, R-phenylethylamines, Butyrophenones and other miscellaneous drugs.
- Commercial Synthetic routes to:** Thioridazine, Haloperidol, Chlorpromazine, Phenytoin, Phenobarital, Carbamazepine valproic acid, Methaqualone, Nitrazepam, Oxazepam, Diazepam, Chlordiazepoxide
- Antibacterial and Antiviral Agents:** History of Antibacterial Drugs, Types, Classifications, Structural Activity Relationship, Fluoroquinolones, Mechanism of Action Of Antibacterial, β -lactams, Bacterial Resistance against Antibacterial Drugs, Target for Anti HIV Drugs. Anti HIV Agents: HIV-Protease inhibitors, Zalcitabine, Zidovudine, Zalcitabine etc. Anti-HIV Nucleosides: Lamivudine, Retrovir, Videx, Hivid, Zalcitabine, Viread, Carbovir, Delavirdine, Ziduvudine, Efavirenz, Calanolide, Capravirine, Nevirapine. DNA Polymerase inhibitors: Acyclovir, Ganciclovir, Penciclovir, Famciclovir, Valaciclovir, Valomaciclovir, Cidofovir.
- Antineoplastic agents:** Alkylating agents (Nitrogen mustards, Aziridines, Sulfonic acid Esters, Epoxides, Nitrosoureas, Triazines, Phosphamides, Mitomycin, Comparative activity of alkylating agents). **Antimetabolites:** Antifolates (Methotrexate), Mercaptopurine, Thioguanine, Flouxouracil, Floxuridine, Cytarabine, Azathioprine, Antitumor antibiotics, Dactinomycin, Daunorubicin, Aclacinomycin, Mithramycin, Bleomycin, **Miscellaneous compounds:** Cisplatin, Taxol, Gemtazole, Pipobromin. **Antitumor alkaloids:** Vincristine, Vinblastine. **Hormones agonist and antiagonists:** Steroids, Tamoxifen, Mitotane, Dromastanalone propionate, Testalactone, Megestrol acetate Immunotherapy.

1. Wilson and Gisvolds Textbook of Organic Medicinal and Pharmaceuticals Chemistry, 8th edition, edited by R.F. George, J.B. Lippincott Company, Philadelphia, 1982.
2. Pharmaceutical Chemicals in Perspective. B.G. Reuben and H.A. Wittcoff, John Wiley & Sons, New York, 1989.
3. W.O. Foye, T.L. Lamke, D.A. Williams, Principles of Medicinal Chemistry, 5th edition, Lippincott Williams and Wilkins, 2002.

Annexure-D LABORATORY PRACTICES
ESL964

Credits 3-0-0

Total Hrs 45

1. Introduction to chemical analysis: Nature of analytical chemistry, general directions of chemical analysis: Cleanliness in the laboratory, Recording and planning data. Data quality: Bias, Precision, Uncertainty, Method detection limit, Checking correctness of analysis, Expression of results, Significant figures, Collection and preservation of sample,

2. Laboratory hazards: Chemical, Fire, Careless habits, Handling of compressed gases, Stockroom safety rules, Laboratory safety rules. Quality assurance of chemical measurements: Quality assurance, quality control, Quality assessment, Sampling, Sampling custody, Sample preparation, Analytical methodology with case studies, Calibrations, Detection limits, Statistics in chemical analysis, Quality control charts.

3. Laboratory apparatus and glassware: Labware materials, soft vs. heat resistant glassware, plastic, porcelain, platinum, nickel labware. Volumetric flask, pipette, burette, cleaning of volumetric glassware. Types of balances: Analytical balances, Desiccators.

4. Chemical reagents and standards: Grade and purity of chemicals, Proper storage of chemicals and standards, Laboratory pure water, Preparation of reagent grade water, Reagent water quality.

5. Reagents and solutions. Stock standardization solutions, Preparation and standardization of common standard solutions,

6. Filtration: Gravity, Vacuum, Centrifugation, Distillation: Simple, Fractional, Vacuum, Refluxing, Ion exchange, Drying and washing sample, Liquid-liquid extraction by separating funnel, Soxhlet extraction.

7. Software's for stock room management, Role of computers in Laboratory occupational health and safety, Waste minimization and disposal.

References:

1. Csuros, M., Environmental Sampling and Analysis, Lewis Publications.
2. Standard methods for the examination of water

LABORATORY PRACTICES AND SAFETY

ESL964

Total Hrs 45

L	P	T	C
3	0	0	3

1. Introduction to chemical analysis:

Nature of analytical chemistry, General directions of chemical analysis: Cleanliness in the laboratory, Recording and planning data. Data quality: Bias, Precision, Uncertainty, Method detection limit, Checking correctness of analysis, Expression of results, Significant figures, Collection and preservation of sample.

2. Data Analysis:

Uncertainties, Errors, calibrations, Mean, Standard Deviation, Least square fit.

3. Laboratory apparatus and glassware:

Lab wares, soft Vs heat resistant glasswares, lab ware's of plastic, porcelain, platinum and nickel. Volumetric flasks, Pipette, burette, Cleaning of volumetric glassware. Calibrations of Glass wares, Types of balances: Analytical balances, Desiccators.

4. Chemical reagents and standards:

Grade and purity of chemicals, Proper storage of chemicals and standards, Laboratory pure water, Preparation of reagent grade water, Reagent water quality.

Quality assurance of chemical measurements: Quality assurance, quality control, Quality assessment, Sampling, Sampling custody, Sample preparation, Analytical methodology with case studies, Calibrations, Detection limits, Statistics in chemical analysis, Quality control charts.

5. Reagents and solutions.

Stock standardization solutions. Preparation and standardization of common standard solutions.

6. Common Laboratory techniques:

Gravity, Vacuum, Centrifugation, Distillation: Simple, Fractional, Vacuum, Refluxing, Ion exchange, Drying and washing sample, Liquid-liquid extraction by separating funnel, Soxhlet extraction and filtration.

7. Inventory Management:

Software's for stock room management, Role of computers in Laboratory occupational health and safety, Waste minimization and disposal.

8. Laboratory hazards and safety:

Lab design, Fume hoods, Chemical safety aspects, Fire, Careless habits, Safe Storage, Handling of Chemicals, Handling of compressed gases, Stockroom safety rules, and Laboratory safety rules, Protection of Environment, Disposal of Chemicals, Bio safety, chemical and electrical safety, Fire safety, Radiation safety, Eyewash and safety showers, Routine mock drills for lab safety.
