Suggestions/Comments, if any, may please be written below:

- Curriculum should be more practically aligned with the corporative requirements.
- Master studies should have less subjects but essential and much focused ones, rather than just extra subjects to complete the credits.
- Few pragmatic subjects should be delivered/organized by industry specialists who can share the essence of the subjects with students in more realistic manner. For instance: Investments and Corporate Finance: These subjects are quite technical rather than just a copy pen approach based.
- Master students should also be involved in real time research projects.

**I.K. Gujral Punjab Technical University** is doing well. My all best wishes are with them. One suggestion from my side is to employ practice school programs at department levels. For example, Department of Management and Hospitality can start practice school programs where students of management and hospitality disciplines can learn innovative and cutting edge solutions for many industrial problems by joining Industry as Interns. They can hone contemporary technological and managerial skills by joining practice schools. University requires giving space to students for at least good amount of time (It is different from summer internships). Practice schools will enhance the options for students to grab real life industry experience with their college education; they can even get PPOs (Pre-Placement Offers).
