MSPH411-18	MATHEMATICAL PHYSICS-I	L-3, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level mathematics

Course Objectives: The objective of the course on **Mathematical Physics-I** is to equip the M.Sc. students with the mathematical techniques that he/she needs for understanding theoretical treatment in different courses taught in this class and for developing a strong background if he/she chooses to pursue research in physics as a career.

Course Outcomes: At the end of the course, the student will be able to

CO1	Use complex variables for solving definite integral.
CO2	Use the Delta and Gamma functions for describing physical systems.
CO3	Solve partial differential equations using boundary value problems.
CO4	Describe special functions and recurrence relations to solve the physics problems.
CO5	Use statistical methods to analyse the experimental data.

Mapping of course outcomes with the program outcomes

MSPH414-18	**Electronics**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Basic knowledge about electronics

Course Objectives: The aim and objective of the course on **Electronics** is to introduce the students of M.Sc. class to the formal structure of the subject and to equip them with the knowledge of semiconductor physics, basic circuit analysis, first-order nonlinear circuits, OPAMP based analog circuits and introduction to digital electronics so that they can use these in various branches of physics as per their requirement.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand working of Different Semiconductor devices (Construction, Working Principles and V-I characteristics) and their applications.
CO2	Explain the construction and working of Thyristors and use Thyristors for various applications.
CO3	Design Analog and Digital Instruments and their applications.
CO4	Apply Boolean algebra and Karnaugh maps.
CO5	Design the Sequential and Integrated circuits.

Mapping of course outcomes with the program outcomes

MSPH415-18	**Computational Physics**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **Computational Physics** is to familiarize the students of M.Sc. students with the numerical methods used in computation and programming using any high level language such as Fortran, C++, etc., so that they can use these in solving simple physics problems.

Course Outcomes: At the end of the course, the student will be able to

CO1	Apply basics knowledge of computational physics in solving the physics problems.
CO2	Programme with the C++ or any other high level language.
CO3	Use various numerical methods in solving physics problems.
CO4	Analyze the outcome of the algorithm/program graphically.
CO5	Simulate the physical systems using simulations.

MSPH416-18	**Electronics Lab**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level physics electronics experiments

Course Objectives: The aim and objective of the laboratory on **Electronics Lab** is to expose the students of M.Sc. class to experimental techniques in electronics so that they can verify some of the things read in theory here or in earlier classes and develop confidence to handle sophisticated equipment.

Course Outcomes: At the end of the course, the student will

CO1	Acquire hands on experience of handling and building electronics circuits.
CO2	Be familiar with the various components such as resistors, capacitor, inductor, IC chips and how to use these components in circuits.
CO3	Be able to understand the construction, working principles and V-I characteristics of various devices such as PN junction diodes, UJT, TRIAC, etc.
CO4	Capable of using components of digital electronics for various applications.
CO5	Able to design and perform scientific experiments as well as accurately record and analyze the results of experiments.

MSPH417-18	Computational Physics Lab-I	L-3, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level numerical methods

Course Objectives: The aim and objective of the course on **Computational Physics Lab-I** is to familiarize the of M.Sc. students with the numerical methods used in computation and programming using C++ language so that they can use these in solving simple problems pertaining to physics.

Course Outcomes: At the end of the course, the student will be able to

CO1	Apply basics knowledge of computational Physics in solving various physical problems.
CO2	Programme with the C++ or any other high level language.
CO3	Use various numerical methods in describing/solving physics problems.
CO4	Solve problem, critical thinking and analytical reasoning as applied to scientific problems.
CO5	Analyse and reproduce the experimental data.

MSPH421-18	Mathematical Physics-II	L-3, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level mathematics

Course Objectives: The aim and objective of the course on **Mathematical Physics-II** is to equip the M.Sc. Students with the mathematical techniques that he/she needs for understanding theoretical treatment in different courses taught in this class and for developing a strong background if he/she chooses to pursue research in physics as a career.

Course Outcomes: At the end of the course, the student will able to

CO1	Understand the basics and aplications of group theory in all the branches of Physics.
CO2	Use Fourier series and transformations as an aid for analyzing physical problems.
CO3	Apply integral transform to solve mathematical problems of Physics interest.
CO4	Formulate and express a physical law in terms of tensors and simplify it by use of coordinate transforms.
CO5	Develop mathematical skills to solve quantitative problems in physics.

MSPH422-18	**Statistical Mechanics**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level statistical mechanics

Course Objectives: The aim and objective of the course on **Statistical Mechanics** is to equip the M.Sc. student with the techniques of statistical ensemble theory so that he/she can use these to understand the macroscopic properties of the matter in bulk in terms of its microscopic constituents.

Course Outcomes: At the end of the course, the student will be able to

CO1	Find the connection between Statistical Mechanics and thermodynamics
CO2	Use ensemble theory to explain the behavior of Physical systems
CO3	Explain the statistical behavior of Bose-Einstein and Fermi-Dirac systems and their applications.
CO4	Work with models of phase transitions and thermo-dynamical fluctuations.
CO5	Describe physical problems using quantum statistics.

Mapping of course outcomes with the program outcomes

MSPH426-18	**Atomic, Nuclear, and Particle Physics Lab**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level atomic spectroscopy and nuclear physics

Course Objectives: The aim and objective of the lab on **Atomic, Nuclear and Particle Physics** is to expose the students of M.Sc. students to experimental techniques in atomic and nuclear physics so that they can verify some of the results obtained in theory and develop confidence to handle sophisticated equipment.

Course Outcomes: At the end of the course, the student will be able to

CO1	Acquire hands on experience of using particle detectors such as GM counter and Scintillation counter.
CO2	Handle oscilloscope for visualisation of various input and output signals.
CO3	Understand the basic of nuclear safely management.
CO4	Perform scientific experiments as well as accurately record and analyze the results of nuclear experiments.
CO5	Solve applied nuclear problems with critical thinking and analytical reasoning.

Mapping of course outcomes with the program outcomes

MSPH427-18	**Computational Physics Lab-II**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level numerical methods and C++

Course Objectives: The aim and objective of the lab on **Computational Physics-II** is to train the students of M.Sc. class in understanding numerical methods, the usage of high level language such as C++ language for simulation of results for different physics problems and graphic analysis of physical data, so that they are well equipped in the use of computer for solving physics related problems.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand and apply basics knowledge of numerical methods in solving the physics problems.
CO2	Write programme with the C++ or any other high level language.
CO3	Learn use of graphical methods in data analysis and solving physics problems.
CO4	Solve physical problem, enabling development of critical thinking and analytical reasoning.
CO5	Apply computational physics in frontier areas of pure and applied research in physics and allied fields.

Mapping of course outcomes with the program outcomes

MSPH532-18	**Nuclear Physics**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **Nuclear Physics** is to familiarize the students of M.Sc. class to the basic aspects of Nuclear Physics like static properties of nuclei, radioactive decays, nuclear forces, nuclear models, and nuclear reactions so that they are equipped with the techniques used in studying these things.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand and compare nuclear models and explain nuclear properties using nuclear models.
CO2	Understand structure and static properties of nuclei.
CO3	Analyse various decay mode of nucleus.
CO4	Use nucleon-nucleon scattering and deuteron problem to explain nature of nuclear forces.
CO5	Describe various types of nuclear reactions and their properties.

Elective Subject - II

MSPH539-18	**Science of Renewable source of Energy**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level semiconductor physics

Course Objectives: The aim and objective of the course on **Science of renewable Energy Sources** is to expose the M.Sc. students to the basics of the alternative energy sources like solar energy, hydrogen energy, etc.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the energy demand of world & distinguish between traditional and alternative form of energy.
CO2	Describe the concept of solar energy radiation and thermal applications.
CO3	Analyze making of solar cell and its types.
CO4	Identify hydrogen as energy source, its storage and transportation methods.
CO5	Compare wind energy, wave energy and ocean thermal energy conversion.

MSPH540-18	**Condensed Matter Physics Lab**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Understanding of graduate level solid state physics experiments

Course Objectives: The aim and objective of the courses on **Condensed Matter Physics Lab** is to train the students of M.Sc. class to advanced experimental techniques in condensed matter physics so that they can investigate various relevant aspects and are confident to handle sophisticated equipment and analyze the data.

Course Outcomes: At the end of the course, the student will be able to

CO1	Measure conductivity, resistivity and thermo-dynamical properties of solids.
CO2	Measure magnetic properties and magnetic behavior of magnetic materials.
CO3	Describe the lattice dynamics of simple lattice structures in terms of dispersion relations.
CO4	Design and carry out scientific experiments as well as accurately record and analyze the results of experiments.
CO5	Solve problem with critical thinking and analytical reasoning.

Elective Subject -III

MSPH542-18	**Experimental Techniques in Nuclear and Particle Physics**	**L-3, T-1, P-0**	**4 Credits**

Pre-requisite: Course on Nuclear and Particle Physics

Course Objectives: The aim and objective of the course on **Experimental Techniques in Nuclear and Particle Physics** is to expose the students of M.Sc. students to experimental aspects of different equipment and methods used in the fields of nuclear physics and particle physics.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand various experimental techniques for describing interaction of radiations with matter.
CO2	Use various statistical methods for experimental data.
CO3	Knowledge about the different types of the radiation detectors and their applications.
CO4	Introduced to neutron physics, methods to detector slow and fast neutrons.
CO5	Equipped with the basic knowledge about the experimental methods used in the various laboratories across the world.

MSPH547-18	Dissertation	L-0, T-12, P-0	12 Credits

Pre-requisite: Knowledge of specific branch of physics

Course Objectives: The aim of the **M.Sc.** Research project work or Dissertation is to expose the students to preliminaries and methodology of research in Theoretical Physics and Experimental Physics. Students get the opportunity to participate in some ongoing research activity and development of a laboratory experiment.

Course Outcomes: At the end of the course, the student will be able to

CO1	Explain the significance and value of problem in physics, both scientifically and in the wider community.
CO2	Design and carry out scientific experiments as well as accurately record the results of experiments.
CO3	Critically analyse and evaluate experimental strategies, and decide which is most appropriate for answering specific questions.
CO4	Research and communicate scientific knowledge in the context of a topic related to condensed matter physics/Nuclear/High Energy Physics, in oral, written and electronic formats to both scientists and the public at large.
CO5	Explore new areas of research in physics and allied fields of science and technology.
