Introduction

Waste materials are substances which are no longer of use and thus needs to be discarded after primary use. They may be in the form of solids, liquids or gases in a container. Waste materials may also include hazardous residues. Chemical waste consists of chemical substances, including laboratory chemicals, film developer, disinfectants (expired or no longer in use), solvents, cleaning agents and others types. Some of these waste requires particular attention and disposal and thus Waste legislation divides waste into non-hazardous and hazardous categories.

As department of chemical sciences is offering graduate, postgraduate and research programmes in chemistry, use of chemicals and disposal needs to be proper with regards to health and environment safety. The goal of this Chemical Waste Management Plan is to protect the health and safety of employees, students, and the environment while complying with applicable Hazardous waste management rules 2016, Government of India. Hence the following policy is being recommended for the chemical waste management at departmental level.
