### SCIENTIFIC MOTIVATION

Understanding the structure of neutron-rich nuclear matter is a key to understanding the high energy star merger and nucleosynthesis process.

- The accurate knowledge of neutron star composition play a vital role in the prediction of astrophysical observables such as the NS maximum mass (NSM) and the radius of neutron rich matter (RNSM) in the presence of  $K=0$  hyperons.

Recent investigations related to the structure of neutron-rich matter indicate that the neutron-rich matter isospin asymmetry is more important than the neutron number, which suggests that the number of neutrons of experimental interest is much higher than predicted by theoretical models such as RMF or Fermi liquid models (FLM).
