For any further queries, you may please call Dr. M S Bedi, Assistant Director (CR&A) @ 9478098076.

With profound regards,

Deputy Director (CR&A)

"Propelling Punjab to a prosperous Knowledge Society"

About us:

Totality Corp was started in July 2017 with the goal of combining scalability through technology, innovation through design and retention through content. For our first product we wanted to develop a platform for gamers to compete with tangible rewards, culminating into MGPL (Mobile Gaming Premier League). MGPL was the first mobile platform in India to offer real money gaming across a variety of casual games. We grew that business to 2.2mn users, with tangible rewards on offer of Rs 2.5 Crores each month. The product was self funded by the Founder and saw the emergence of many VC backed startups over the next 9 months.

In July 2019, Totality Corp ventured into the interactive video space and subsequently raised funding from 2 renowned Institutional Investors, Leo Capital and Mayfield. We launched Yovo, a vertical feed, interactive video mobile app which grew to 3.5mn users with 1.3mn monthly active users, who were creating 40,000 videos each day on the platform. Interactive video (think Netflix Bandersnatch) is an exciting space but we realised that the interactivity behavior was still early for the Indian market where TV consumption and other non-interactive linear video formats like Tiktok were booming and yet to hit saturation points.

Totality Corp has now gone back to its gaming roots and are creating what Walt Disney would have founded in 2020. We are developing a live persistent virtual world, where people all over the World can congregate, socialize, play games and create together. Our vision is to empower everyone on this planet with an opportunity to create anything, do anything by being themselves. We are bringing the new phase of 3D Internet to the World.

So far, the Internet has largely been in the 2D spatial space, and focused on reducing friction in transactions. The on-demand business models, social networks, OTT providers, all have largely worked on designing products for reducing "negative friction" from transactions and behaviours. In our view, Gaming works differently and it adds "positive friction" to enable behaviors which users desire to fulfill their needs. We are at the forefront of bringing this change.

Overview:
We're on the lookout for a talented graphic designer to join our team and bring to life complex concepts in a creative, engaging manner. You will work with our marketing team and scale our branding efforts, Your projects will need to stay in sync with brand guidelines but you'll have complete creative freedom.

Selected Intern's day-to-day Responsibilities include:
1. Able to handle designing web Pages, templates, newsletters website design redesign.

In our view, Gaming works differently and it adds "positive friction" to enable behaviors which users desire to fulfill their needs. We are at the forefront of bringing this change.

Join us to create the future of gaming worlds and bring the next phase of 3D Internet to the World.

Totality Corp is led by a team with an educational background from IIT Delhi, IIM Bangalore, London School of Economics and Campus Law Center, Delhi University. The company is always on the lookout for people who are excited to solve problems and have a large-scale impact by creating innovative and scalable solutions.

Job Description

Minimum Qualifications:

- Bachelor's degree or equivalent practical experience.
- Experience working with Unix/Linux, Windows or Mac environments, distributed systems, machine learning, information retrieval and TCP/IP.
- Experience programming in C, C++, Java or Python.

Responsibilities

- You write code that an SDE unfamiliar with the system can understand
- Research, conceive and develop software applications to extend and improve existing products.
- You work on project ideas with stakeholders and peers
- Contribute to a wide variety of projects utilizing natural language processing, artificial intelligence, data compression, machine learning.
- Collaborate on scalability issues involving access to massive amounts of data and information.
- Strong in algorithms to solve challenges/problems that you are presented with.
- You do things with the proper level of complexity the first time (or at least minimize incidental complexity)
- Ability to work independently and figure out your way around

Technical Skills:

- Good understanding of software engineering , software development lifecycle and OOPS concepts
- Ability to convert the requirements to simplistic technical design
- Expertise in any of these languages java,C#,python,golang or node.js
- Good analytical & problem-solving skills
- Experience with API Design, ability to architect and implement an intuitive customer and third-party integration story
- Ability to think and analyze both breadth-wise (client, server, DB, control flow) and depth-wise (threads, sessions, space-time complexity) while designing and implementing services
- A willingness to dive deep, experiment rapidly and get things done

- An openness to write code that conforms to the best practices and policies of a large software organization, not just your personal preferences
- A desire to take ownership and pride in everything you do and stand by what you deliver
- Experience with building high-performance, highly-available and scalable distributed systems
- knowledge of DBMS and Computer networking.
- Familiarity with Rest, Soap and GRPC
