# B.Sc. (Hons.) Mathematics

## Course Structure and Syllabus

## (Based on Choice Based Credit System)

## Batch 2022 & onwards

## DEPARTMENT OF MATHEMATICS

## VISION

To be among the best mathematics departments in the region and to establish a national reputation as a centre for research and teaching in mathematics. Moreover, the department will contribute to the development of students as mathematical thinkers, and to function as productive citizens.

## MISSION

- To discover, mentor, and nurture mathematically inclined students, and provide them a supportive environment that fosters intellectual growth.
- To prepare our undergraduate and graduate students to develop the attitude and ability to apply mathematical methods and ideas in a wide variety of careers.
- To perform widely recognized research in focused areas of mathematical and statistical theory, methodology, and education.
- To advocate for mathematical sciences and UTEP in schools and the local community.

## B.Sc. (Honours Mathematics) Program

## PROGRAM OBJECTIVES

Objective of the program is to catch young and talented students to motivate them to study Mathematics and to nurture them to develop their mathematical reasoning and logics. Other objectives of the program are to inspire students to pursue study in higher mathematics and grow as a skilful mathematician to cater the needs of knowledgeable society.

**Duration:** B.Sc. (Hons) Mathematics is a graduate level program offered by the Department of Mathematical Sciences. This is a 3-years program, consisting of six semesters with two semesters per year.

**Program Code:** BSHM (Bachelor of Science (Hons) in Mathematics)

**Eligibility:** 10+2 in any stream with Mathematics as one of the subjects with at least 50% marks in aggregate.

**PROGRAM EDUCATIONAL OBJECTIVES:** At the end of the program, the student will be able to:

| PEO1 | Apply principles of basic science concepts in understanding, analysis and prediction of mathematical systems. |
|------|---------------------------------------------------------------------------------------------------------------|
| PEO2 | Develop human resource with knowledge, abilities and insight in Mathematics and related fields required for career in academia and industry. |
| PEO3 | Engage in lifelong learning and adapt to changing professional and societal needs. |

**PROGRAM SPECIFIC OUTCOMES**

At the end of the program,

| PSO1 | Students will be able to understand the nature of Mathematics and shall be ready to study higher 'Abstract Mathematics'. |
|------|-------------------------------------------------------------------------------------------------------------------------|
| PSO2 | Students will be able to visualize the importance of Mathematics and apply the knowledge of Mathematics in Physical, Chemical and Social Sciences. |
| PSO3 | Students will be able to use latest mathematical tools and software. |
| PSO4 | Students will be able to formulate computer codes to tackle the complex mathematical problems. |
| PSO5 | Students will become more confident due to enhanced level of reasoning, logics, skills and shall be able to understand the needs of the society. |

**PROGRAM OUTCOMES:** At the end of the program, the student will be able to:

| PO1 | Understand the concepts of different branches of Mathematics. |
|-----|---------------------------------------------------------------|
| PO2 | Demonstrate expertise to conduct wide range of scientific modelling. |
| PO3 | Apply the concepts of mathematics in areas of mechanics, analysis, calculus, algebra, geometry, mathematical modelling etc., in industry, academia, and day-to-day life. |

**Scheme of the Program: B.Sc. (Hons.) Mathematics**

**SEMESTER FIRST**                                                    **Contact Hrs. 24 Hrs.**

| S.No. | Course Code | Course Type | Course Title | Load Allocation | | | Marks Distribution | | Total Marks | Cr |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | L | T | P | Internal | External | | |
| 1. | BSHM-101-22 | Compulsory | Calculus-I | 4 | - | - | 40 | 60 | 100 | 4 |
| 2. | BSHM-102-22 | | Algebra | 5 | 1 | - | 40 | 60 | 100 | 6 |
| 3. | BSHM-103-22 | | Programming Lab-I | - | - | 4 | 30 | 20 | 50 | 2 |
| 4. | BHHL-115-22 | | Communicative English | 2 | - | - | 20 | 30 | 50 | 2 |
| 5.* | BSHP-111-21 | Elective | Optics | 3 | 1 | - | 40 | 60 | 100 | 4 |
| | BSHP-113-21 | | Physics Lab-I | - | - | 4 | 30 | 20 | 50 | 2 |
| | UGCA-1902 | | Fundamentals of Computer and IT | 3 | 1 | - | 40 | 60 | 100 | 4 |
| | UGCA-1906 | | Fundamentals of Computer and IT (Laboratory) | - | - | 4 | 30 | 20 | 50 | 2 |
| | | | | | | | **Total** | | | 20 |

**L: Lectures     T: Tutorial     P: Practical     Cr: Credits**

**Note*: Physics (BSHP-111-21 & BSHP-113-21) are compulsory for the Students with Non-Medical background. Students without Non-medical background should opt Fundamentals of Computer and IT (UGCA-1902 & UGCA-1906).**

**SEMESTER SECOND**                                                      **Contact Hrs. 24 Hrs.**

| S.No. | Course Code | Course Type | Course Title | Load Allocation | | | Marks Distribution | | Total Marks | Cr |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | L | T | P | Internal | External | | |
| 1. | BSHM-201-22 | Compulsory | Real Analysis | 5 | 1 | - | 40 | 60 | 100 | 6 |
| 2. | BSHM-202-22 | | Differential Equations | 4 | - | - | 40 | 60 | 100 | 4 |
| 3. | BSHM-203-22 | | Programming Lab-II | - | - | 4 | 30 | 20 | 50 | 2 |
| 4.* | BHHL-116A-22 Or BHHL-116B-22 | | Punjabi Compulsory Or Mudli Punjabi | 2 | - | - | 20 | 30 | 50 | 2 |
| 5.** | BHIC-111-22 | Elective | Chemistry-I | 3 | 1 | - | 40 | 60 | 100 | 4 |
| | BHIC-112-22 | | Chemistry Lab-I | - | - | 4 | 30 | 20 | 50 | 2 |
| | BBA-GE-201-18 | | Managerial Economics-II | 5 | 1 | 0 | 40 | 60 | 100 | 6 |
| | | | | | | | **Total** | | | 20 |

   **L: Lectures     T: Tutorial     P: Practical     Cr: Credits**

**Note 1\*: Students with Punjabi as a passing subject in 10th class will study Punjabi Compulsory (BHHL-116A-22). Students without Punjabi as a subject in 10th class will study Mudli Punjabi (BHHL-116B-22).**

**Note 2\*\*: Chemistry (BHIC-111-22 & BHIC-112-22) is compulsory for the Students with Non-Medical background. Students without Non-medical background should opt Managerial Economics-I (BBA-GE-201-18)**

**SEMESTER THIRD**                                                    **Contact Hrs. 28 Hrs.**

| 7.* | BBA-401-18 | | Business Research Methods | 5 | 1 | - | 40 | 60 | 100 | 6 |
| | | | | | | | **Total** | | | 26 |

**L: Lectures**      **T: Tutorial**      **P: Practical**      **Cr: Credits**

**Note\*: Chemistry (BHIC-211-22 & BHIC-212-22) is compulsory for the Students with Non-Medical background. Students without Non-medical background should opt Managerial Economics (BBA-401-18)**

**Examination and Evaluation**

| Theory | | | |
|---|---|---|---|
| S. No. | Evaluation criteria | Weightage in Marks | Remarks |
| 1 | Mid term/sessional Tests | 24 | Internal evaluation (40 Marks) MSTs, Quizzes, assignments, attendance, etc., constitute internal evaluation. |
| 2 | Attendance | 6 | |
| 3 | Assignments/Seminars/Presentations/Continuous Evaluation | 10 | Average of two mid semester test will be considered for evaluation. |
| 4 | End semester examination | 60 | External evaluation |
| 5 | Total | 100 | Marks may be rounded off to nearest integer. |
| Practical | | | |
| 1 | Evaluation of practical record/ Viva Voice/Attendance/Seminar/ Presentation | 30 | Internal evaluation |
| 2 | Final Practical Performance + Viva-Voce | 20 | External evaluation |
| 3 | Total | 50 | Marks may be rounded off to nearest integer. |

## Instructions for Paper-Setter in B. Sc (Hons.) Mathematics

### A. Scope

1. The question papers should be prepared strictly in accordance with syllabus and format as prescribed by the University.

2. The question paper should cover the entire syllabus with uniform distribution among each unit and weightage of marks for each question.

3. The language of questions should be simple, direct, and documented clearly and unequivocally so that the candidates may have no difficulty in appreciating the scope and purpose of the questions. The length of the expected answer should be specified as far as possible in the question itself.

4. The distribution of marks to each question/answer should be indicated in the question paper properly.

### B. Type and difficulty level of question papers

1. Questions should be framed in such a way as to test the student's intelligence and understanding of the applied aspects of the subject. The weightage of the marks as per the difficulty level of the question paper shall be as follows:

|       |                    |     |
|-------|--------------------|-----|
| i)    | Easy question      | 30% |
| ii)   | Average questions  | 50% |
| iii)  | Difficult questions | 20% |

2. The numerical content of the question paper should be up to 40%.

### C. Format of question paper

1. Paper code and Paper-ID should be mentioned properly.
2. The question paper will consist of three sections: Sections-A, B and C.
3. Section-A is COMPULSORY consisting of TEN SHORT questions carrying two marks each (total 20 marks) covering the entire syllabus.
4. The Section-B consists of FOUR questions of eight marks each covering Unit I & II of syllabus (Taking two questions from each Unit I & II).
5. The Section-C consists of FOUR questions of eight marks each covering Unit III & IV of syllabus (Taking two questions from each Unit III & IV).
6. Sub-parts of the questions in Section B and C should be preferred for numerical/conceptual questions.
7. Attempt any five questions in all, selecting at least two questions from each of the two sections.

**Question paper pattern for MST:**

| Roll No: | | No of pages: |
|---|---|---|
| **IK Gujral Punjab Technical University- Jalandhar** | | |
| **Department of Mathematical Sciences** | | |
| **Academic Session:** | | |
| **Mid-Semester Test: I/II (Regular/reappear)** | **Date:** | |
| **Programmse:** B.Sc. (Hons.) Mathematics | **Semester:** | |
| **Course Code:** | **Course:** | |
| **Maximum Marks: 24** | **Time: 1 hour 30 minutes** | |

❖ Note: Section A is compulsory; Attempt any two questions from Section B and one question from Section C.

| Section: A | Marks | Cos |
|---|---|---|
| 1 | 2 | |
| 2 | 2 | |
| 3 | 2 | |
| 4 | 2 | |
| **Section: B** | | |
| 5 | 4 | |
| 6 | 4 | |
| 7 | 4 | |
| **Section: C** | | |
| 8 | 8 | |
| 9 | 8 | |

**SEMESTER-I**

| BSHM-101-22 | Calculus-I | L-4, T-0, P-0 | 4 Credits |
|---|---|---|---|

**Pre-requisite:** Elementary calculus of senior secondary level.

**Course Objectives:** The objectives of this course are to make the students understand the following:
1. The fundamental concepts of differential calculus.
2. The geometrical meaning of functions, limits, continuity, derivatives, mean value theorems.
3. Applications of derivatives.
4. The definition of Higher order derivatives and its basic applications.
5. The usability of Higher order derivatives to establish Taylor's theorem, Leibnitz theorem and Maclaurin theorem.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | Understand the basic concepts of Differential and Integral Calculus. |
|---|---|
| CO2 | Visualize all concepts geometrically. |
| CO3 | Sketch curves of the functions intuitively with the help of Differential Calculus. |
| CO4 | Apply the knowledge of Differential and Integral Calculus. |
| CO5 | Understand the fundamental relation between differential and Integral Calculus. |

| CO5 | ✓ | ✓ | ✓ | ✓ | ✓ |

**Course Title: Calculus-I**
**Course Code: BSHM-101-22**

### UNIT-I

**Functions, their limits and continuity:** Real line, intervals, order properties of real numbers, the least upper bound and the greatest lower bound properties, Archimedean property. Functions, Graphs of functions, Exponential functions, Inverse functions and Logarithmic functions, implicitly defined functions, some special functions, one-one functions, onto functions, composition of functions, limit of a function, calculating limits through limit laws, limits using L' Hospital's rule, The precise definition of limit and continuity ($\varepsilon$-$\delta$ definition), continuous functions and classification of discontinuities, uniform continuity.

### UNIT-II

**Differentiation:** Derivative of a function, the derivative as a function, derivatives of polynomials and exponential functions, the product and quotient rules, rates of change in natural and social sciences, derivatives of trigonometric, inverse trigonometric, logarithmic, and hyperbolic functions, the chain rule, implicit differentiation, differentiation of determinants.

### UNIT-III

**Applications of derivative:** maximum and minimum values, increasing and decreasing functions, Intermediate value theorems: Rolle's theorem, Lagrange's theorem, Cauchy's mean value theorem, how derivatives affect the shape of graph, concavity, convexity, the second derivative test, points of inflexion.

### UNIT-IV

Higher order derivatives, calculation to the $n^{th}$ derivative, determination of $n^{th}$ derivative of rational functions. The $n^{th}$ derivative of the products of power of sines and cosines, Leibnitz's theorem, the $n^{th}$ derivative of the product of two functions, Maclaurin's theorem, Taylor's theorem.

**TEXT BOOKS**

1. Shanti Narayan and P. K. Mittal, Differential Calculus, S. Chand, 2015

**RECOMMENDED BOOKS:**

2. James Stewart, Calculus, 5th Edition, Brooks/Cole(Thomson), 2003.
3. Robert Wrede and Murray R. Spiegel, Advanced Calculus, $3^{rd}$ Edition, Schaum's Outline Series (McGraw Hill), 2010.
4. Maurice D Weir, Frank R. Giordano and Joel Hass, Thomas' Calculus, $11^{th}$ Edition, Pearson, 2008.
5. N. Piskunov, Differential and Integral Calculus, Mir Publishers, Moscow (CBS Publishers & Distributors, India), 1996.

| BSHM-102-22 | Algebra | L-5, T-1, P-0 | 6 Credits |
|---|---|---|---|
| **Pre-requisite:** - Complex numbers, Sets, Relation and Functions | | | |

**Course Objectives:** This course is designed to introduce the basic notions of algebra. The major focus of the course will be on: De Moivre's theorem & its applications, matrices and their use in system of equations; theoretical foundation of theory of equations and their solutions.

**Course Outcomes:** At the end of the course, the students will be able to

| CO1 | Use the De Moivre's theorem for solving problems concerning powers of complex numbers and complex roots of polynomials etc. |
|---|---|
| CO2 | Use matrices in solving system of equations. |
| CO3 | Demonstrate linear independence and dependence of a set of vectors. |
| CO4 | Find inverse of a matrix using Gauss-Jordan method. |
| CO5 | Demonstrate the nature of solutions of polynomial equations and use Cardano's method, Ferrari method and Descarte's method for finding solutions of equations. |

| **CO4** | ✓ | ✓ | ✓ | ✓ | ✓ |
| **CO5** | ✓ | ✓ | ✓ | ✓ | ✓ |

**Course Title: Algebra**
**Course Code: BSHM-102-22**

### Unit I

**Polynomials and Complex Numbers:** Polynomials, The remainder and factor theorem, Synthetic division, Factored form of a polynomial, Fundamental theorem of algebra, Polar representation of complex numbers, De Moivre's theorem for integer and rational indices and their applications. The nth roots of unity.

### Unit II

**Roots of a Polynomial:** Relations between the roots and the coefficients of polynomial equations, Theorems on imaginary, integral and rational roots Fundamental theorem of symmetric polynomials (without proof). Evaluation of symmetric functions of roots, Rational roots of polynomials with integral coefficients. Descartes rule of sign.

### Unit III

**Cubic and Biquadratic Equations:** Strum's theorem (statement only), Solution of cubic equation using Cardano's method, and biquadratic equation by Descartes method and Ferrari's method.

### Unit IV

**System of Equations**: Systems of linear equations (homogeneous and non-homogeneous), Row reduction and echelon forms, Row rank, column rank and their equivalence, Vector equations, The matrix equation $Ax = b$, Solution sets of linear systems, Gauss elimination method, Consistency of Linear System of equations, Augmented matrices, The inverse of a matrix, Gauss Jordon method.

**RECOMMENDED BOOKS:**

- Andreescu, Titu & Andrica Dorin, Complex Numbers from A to...Z. (2nd ed.). Birkhäuser (2014).

- Dickson, Leonard Eugene First Course in the Theory of Equations. The Project Gutenberg E-Book (http://www.gutenberg.org/ebooks/29785), (2009)

- Kolman, Bernard, & Hill, David R., Introductory Linear Algebra with Applications (7th ed.). Pearson Education, Delhi. First Indian Reprint 2003.

| BSHM-103-22 | Programming Lab-I | L-0, T-0, P-2 | 2 Credits |
|---|---|---|---|

**Pre-requisite:** Knowledge of basic concepts in Mathematics, such as, graphs, functions, conics, matrices etc.

**Course Objectives:** This course is designed to introduce the basic knowledge of computer programming t simple algebraic operations on matrices and to visualize the geometry of curves and conics. two dimensions. The major focus of this course will be on geometric definition of two-dimensional shapes and a rigorous discussion on their properties and use.

**Course Outcomes:** At the end of the course, the students will be able to

| CO1 | Explain the basic concepts of programming. |
|---|---|
| CO2 | Apply the knowledge of programming in different Matrix Operations. |
| CO3 | Use programming in plotting and visualization of graphs of algebraic and transcendental functions. |
| CO4 | Obtain Surface of revolution of curves. |
| CO5 | Study further the tracing of conics. |

<div align="center">

**Course Title: Programming Lab-I**

**Course Code: BSHM-103-22**

</div>

The following topics to be practiced using MATLAB:

i)        Introduce the programming through MATLAB

ii)       Perform Matrix Operations, such as, Addition, Multiplication, inverse, Transpose etc.

iii)      Plot the graphs of algebraic and transcendental functions (For example, $e^{ax+b}, \log(ax+b), \frac{1}{ax+b,}$ with constants a, b, etc.)

iv)      Obtain the surface of revolution of curves.

v)       Trace of conics in Cartesian Coordinates /Polar Coordinates.

vi)      Applications of derivative.

**RECOMMENDED BOOKS:**

1. Higham, D.J. and Higham, N.J., MATLAB Guide, 2nd Edition. Society for Industrial and Applied Mathematics (SIAM), 2005.
2. Gilat, A., MATLAB: An Introduction with Applications, 5th Edition. John Wiley & Sons, 2014.

| BHHL-115-22 | Communicative English | L-2, T-0, P-0 | 2 Credits |
|---|---|---|---|

**Pre-requisite:** Basic proficiency in Communication Skills

**Course objectives:**
- To help the students become proficient in LSRW-Listening, Speaking, Reading & Writing skills
- To help the students become independent users of the English language
- To develop in them vital communication skills, integral to their personal, social, and professional interactions
- To teach them the appropriate language of professional communication
- To prepare them for the job market in their respective domains of specialization.

**Course Outcomes: At the end of the course, the students will**

| CO1 | acquire basic proficiency in reading &listening, writing and speaking skills |
|---|---|
| CO2 | be able to understand spoken and written English language, particularly the language of their chosen technical field. |
| CO3 | be able to converse fluently. |
| CO4 | be able to produce their own clear and coherent texts. |
| CO5 | become proficient in professional communication such as interviews, group discussions, office environments, important reading skills as well as writing skills and thereby will have better job prospects. |

**Course Title: Communicative English**

**Course Code: BHHL-115-22**

## UNIT I-(Literature)

**(A)** *The Poetic Palette* **(Orient Black Swan, Second Edition, 2016)**
The following poems from this anthology are prescribed:

1. Pippa's Song: Robert Browning
2. I Sit and Look Out: Walt Whitman
3. Women's Rights: Annie Louise Walker

**(B)** *Prose Parables* **(Orient Black Swan, 2013)**
The following stories from the above volume are prescribed:

1. Grief: Anton Chekov
2. The Doctor's Word: R.K. Narayan
3. The Doll's House: Katherine Mansfield

## UNIT-II

**Vocabulary:** Synonyms, Antonyms; Standard Abbreviations; One-word substitution
**Grammar:** Subject-Verb Agreement; Noun- Pronoun Agreement; Use of phrases and clauses in sentences; Sentence Structures; Transformation of Sentences

## UNIT-III

**Reading and Understanding:** Comprehension; Summarizing; Paraphrasing; Translation (from Hindi/Punjabi to English and vice-versa); Précis Writing

## UNIT-IV

**Mechanics of Writing & Speaking Skills:** Business letters; Report writing; Career Documents- Job applications, Resume/CV writing, Conversations & Dialogues, Formal Presentations; Dynamics of Group Discussion.

**Text & Reference Books:**

1. John Eastwood, *Oxford Practice Grammar,* Oxford University Press, 2014.
2. Michael Swan, *Practical English Usage,* OUP, 1995
3. F.T. Wood, *Remedial English Grammar,* Macmillan, 2007.
4. William Zinsser, *On Writing Well,* Harper Resource Book, 2001.
5. Sanjay Kumar and Pushp Lata, *Communication Skills,* Oxford University Press, 2011.
6. Liz Hamp-Lyons and Ben Heasly, *Study Writing,* Cambridge University Press, 2006.

| BSHP-111-21 | Optics | L-3, T-1, P-0 | 04 Credits |
|---|---|---|---|

**Pre-requisite:** Understanding of senior secondary level Physics and Mathematics

**Course Objectives:** The objective of the course is to develop basic understanding of Interference, Diffraction and Polarization among students. They also learn about the LASER and its applications. Students will be equipped with knowledge to measure wavelength, refractive index, and other related parameters, which will act as a strong background if he/she chooses to pursue physics as a career.

**Course Outcomes:** At the end of the course, the student will be able to

| CO1 | Identify and illustrate physical concepts and terminology used in optics and other related wave phenomena |
|---|---|
| CO2 | Analyze and understand coherence and phenomenon of interference and their applications |
| CO3 | Acquainted with Fresnel's and Fraunhofer's diffraction and their applications. |
| CO4 | Get thorough knowledge of the polarization of light, changes upon reflection and transmission and will learn to analyze the polarization in optical systems. |
| CO5 | Describe the different types of lasers, its principle, properties and applications of laser beam. |

**PART-A**

### UNIT I

**Interference:** Definition and properties of wave front, Temporal and Spatial Coherence, Young's double slit experiment, Lloyd's single mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films, Fringes of equal inclination (Haidinger Fringes), Newton's Rings: Measurement of wavelength and refractive index, Interferometer: Michelson Interferometer-(1) idea of form of fringes (No theory required), (2) Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, Fabry-Perot interferometer.

### UNIT-II

**Diffraction:** Huygens Principle, Huygens-Fresnel Diffraction theory, Fraunhofer diffraction: Single slit. Circular aperture, Rayleigh criterion of resolution, Resolving Power of a telescope, Double slit, Multiple slits, Diffraction grating, Resolving power of grating. Fresnel Diffraction: Fresnel's Assumptions, Fresnel's Half-Period Zones for Plane Wave. Explanation of Rectilinear Propagation of Light, Theory of a Zone Plate: Multiple Foci of a Zone Plate, Fresnel diffraction pattern of a straight edge and circular aperture.

**PART-B**

### UNIT-III

**Polarization:** Plane polarized light, Representation of Unpolarized and Polarized light, Polarization by Reflection, Brewster's law, Malus Law, Polarization by Selective absorption by Crystals, Polarization by Scattering, Polarization by Double Refraction, Nicol Prism, Huygen's theory of Double Refraction, Polaroid, Elliptically and Circularly polarized lights, Quarter and Half wave plates.

### UNIT-IV

**Laser and Application:** Lasers, Spontaneous emission, Stimulated absorption, Stimulated emission, Einstein coefficients, Einstein relations, Conditions for Laser actions, Population inversion, Different types of Laser Pumping mechanism: Optical Pumping, Electric Discharge and Electrical pumping, Resonators, Two, Three and Four level laser systems, Ruby laser, He-Ne gas Laser, Semiconductor laser, $CO_2$ laser, applications of laser: Holography, Principle of Holography.

**Text and Reference Books:**

1.      Optics: A.K. Ghatak (Tata-McGraw Hill), 1992.

2.      Fundamentals of Optics: F.A. Jenkins and H.E. White (McGraw Hill), 1981.

3.      A Textbook of Optics: Subrahmaniyam N. & et al., S. Chand Publishing, 2006.

4.      O. Svelto: Principles of Lasers, Springer Science & Business Media, 2010.

| BSHP-113-21 | Physics Lab-I | L-0, T-0, P-4 | 2 Credits |
|---|---|---|---|

| **Pre-requisite (If any):** High-school education |
|---|
| **Course Objectives:** The aim and objective of the lab course is to introduce the students to the formal structure of electromagnetism and phenomenon of wave optics so that they can use these as per their requirement. |
| **Course Outcomes:** At the end of the course, the student will be able to |

| CO1 | Able to verify the theoretical concepts/laws learnt in theory courses. |
|---|---|
| CO2 | Trained in carrying out precise measurements and handling sensitive equipment. |
| CO3 | Understand the methods used for estimating and dealing with experimental uncertainties and systematic "errors". |
| CO4 | Learn to draw conclusions from data and develop skills in experimental design. |
| CO5 | Document a technical report which communicates scientific information in a clear and concise manner. |

**Course Title: Physics Lab-I**

**Course Code: BSHP-113-21**

**Note: Students are expected to perform about 8-10 experiments from the following list, selecting minimum of 6-7 from the Physical Lab and 2-3 from the Virtual lab.**

**List of experiments:**

1. Use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, (d) Capacitances, and (e) Checking electrical fuses.
2. To study the laser beam characteristics like; wavelength, aperture, spot size, etc. using diffraction grating.
3. To study the diffraction using laser beam and thus to determine the grating element.
4. To study wavelength and laser interference using Michelson's Interferometer.
5. To find the refractive index of a material/glass using spectrometer.
6. To find the refractive index of a liquid using spectrometer.
7. To determine the angle of prism and resolving power of a prism.
8. To study the magnetic field of a circular coil carrying current using a Steward and Gees Tangent Galvanometer.
9. Determine the radius of circular coil using the Circular coil.
10. To study B-H curve using CRO.
11. To find out polarizability of a dielectric substance.
12. To find out the horizontal component of earth's magnetic field ($B_h$).

| UGCA-1902 | Fundamentals of Computer and IT | L-3, T-1, P-0 | 4 Credits |
|---|---|---|---|

**Pre-requisite:** NA

**Course Outcomes:** At the end of the course, the student will be able to

| CO1 | Understanding the concept of input and output devices of Computers |
|---|---|
| CO2 | Learn the functional units and classify types of computers, how they process information and how individual computers interact with other computing systems and devices. |
| CO3 | Understand an operating system and its working, and solve common problems related to operating systems |
| CO4 | Learn basic word processing, Spreadsheet and Presentation Graphics Software skills. |
| CO5 | Study to use the Internet safely, legally, and responsibly |

**Course Title: Fundamentals of Computer and IT**
**Course Code: UGCA-1902**

## UNIT-I

**Human Computer Interface:** Concepts of Hardware and Software; Data and Information. **Functional Units of Computer System:** CPU, registers, system bus, main memory unit, cache memory, Inside a computer, SMPS, Motherboard, Ports and Interfaces, expansion cards, ribbon cables, memory chips, processors.
**Devices:** Input and output devices (with connections and practical demo), keyboard, mouse, joystick, scanner, OCR, OMR, bar code reader, web camera, monitor, printer, plotter. **Memory:** Primary, secondary, auxiliary memory, RAM, ROM, cache memory, hard disks, optical disks.
**Data Representation:** Bit, Byte, Binary, Decimal, Hexadecimal, and Octal Systems, Conversions and Binary Arithmetic (Addition/ Subtraction/ Multiplication) Applications of IT.

## UNIT II

**Concept of Computing, Types of Languages:** Machine, assembly and High-level Language; Operating system as user interface, utility programs.
**Word processing:** Editing features, formatting features, saving, printing, table handling, page settings, spell-checking, macros, mail-merge, equation editors.

## UNIT-III

**Spreadsheet:** Workbook, worksheets, data types, operators, cell formats, freeze panes, editing features, formatting features, creating formulas, using formulas, cell references, replication, sorting, filtering, functions, Charts & Graphs.
**Presentation Graphics Software:** Templates, views, formatting slide, slides with graphs, animation, using special features, presenting slide shows.

## UNIT-IV

**Electronic Payment System:** Secure Electronic Transaction, Types of Payment System: Digital Cash, Electronic Cheque, Smart Card, Credit/Debit Card E-Money, Bit Coins and Crypto currency, Electronic Fund Transfer (EFT), Unified Payment Interface (UPI), Immediate Payment System (IMPS), Digital Signature and Certification Authority. Introduction to Bluetooth, Cloud Computing, Big Data, Data Mining, Mobile Computing and Embedded Systems and Internet of Things (IoT)

### RECOMMENDED BOOKS:

2. A. Goel, Computer Fundamentals, Pearson Education, 2010.
3. P. K. Sinha & P. Sinha, Fundamentals of Computers, BPB Publishers, 2007.
4. R.K. Jain, IT Tools, Khanna Publishing House.
5. Satish Jain, Ambrish Rai & Shashi Singh, Introduction to Information Technology, Paperback Edition, BPB Publications, 2014.
6. www.sakshat.ac.in
7. https://swayam.gov.in/course/4067-computer-fundamentals

| UGCA-1906 | Fundamentals of Computer and IT Laboratory | L-0, T-0, P-4 | 2 Credits |
|---|---|---|---|

| | |
|---|---|
| **Pre-requisite (If any):** NA | |
| CO1 | Familiarizing with Open Office (Word processing, Spreadsheets and Presentation). |
| CO2 | To acquire knowledge on editor, spread sheet and presentation software. |
| CO3 | The students will be able to perform documentation and accounting operations. |
| CO4 | Students can learn how to perform presentation skills. |

**Course Title: Fundamentals of Computer and IT (Laboratory)**

**Course Code: UGCA-1906**

**List of experiments:**

➢ **Word Orientation:** The instructor needs to give an overview of word processor. Details of the four tasks and features that would be covered Using word – Accessing, overview of toolbars, saving files, Using help and resources, rulers, format painter.

   1) Using word to create Resume:
      Features to be covered: Formatting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colors, Inserting Header and Footer, Using Date and Time option in Word.
   2) Creating an Assignment
      Features to be covered: Formatting Styles, inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.
   3) Creating a Newsletter
      Features to be covered: Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes and Paragraphs
   4) Creating a Feedback form
      Features to be covered: Forms, Text Fields, Inserting objects, Mail Merge in Word.

➢ **Excel Orientation:** The instructor needs to tell the importance of Excel as a Spreadsheet tool, give the details of the four tasks and features that would be covered Excel - Accessing, overview of toolbars, saving excel files.

   1) Creating a Scheduler
      Features to be covered: Gridlines, Format Cells, Summation, auto fill, Formatting Text
   2) Creating an Assignment
      Features to be covered: Formatting Styles, inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.
   3) Creating a Newsletter
      Features to be covered: Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes and Paragraphs
   4) Creating a Feedback form
      Features to be covered: Forms, Text Fields, Inserting objects, Mail Merge in Word.

➢ **Presentation Orientation:**
   1) Students will be working on basic power point utilities and tools which help them create basic power point presentation.
      Topic covered includes: PPT Orientation, Slide Layouts, Inserting Text, Word Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows
   2) This session helps students in making their presentations interactive.
      Topics covered include: Hyperlinks, Inserting–Images, ClipArt, Audio, Video, Objects, Tables and Charts
   3) Concentrating on the in and out of Microsoft power point. Helps them learn best practices in designing and preparing power point presentation.

Topics covered includes: Master Layouts (slide, template, and notes), Types of views (basic, presentation, slide slotter, notes, etc), Inserting – Background, textures, Design Templates, Hidden slides, Auto content wizard, Slide Transition, Custom

4) Animation, Auto Rehearsing
5) Power point test would be conducted. Students will be given model power point presentation which needs to be replicated

➢ **Internet and its Applications:** The instructor needs to tell the how to configure Web Browser and to use search engines by defining search criteria using Search Engines
   1) To learn to setup an e-mail account and send and receive e-mails.
   2) Tolearntosubscribe/postonablogandtousetorrentsforaccelerateddownloads.
   3) Hands on experience in online banking and making an online payment for any domestic bill.

**RECOMMENDED BOOKS:**

1. R.K. Jain, IT Tools, Khanna Publishing House.

2. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.

3. Turban, Rainer and Potter, Introduction to information technology, John Wiley and Sons.

4. Joseph Brady & Ellen F Monk, Problem Solving Cases in Microsoft Excel, Thomson Learning.

**SEMESTER-II**

| BSHM-201-22 | Real Analysis | L-5, T-1, P-0 | 6 Credits |
|---|---|---|---|

**Pre-requisite:** Elementary calculus

**Course Objectives:** The objectives of this course are to make the students understand the fundamental concepts of Real line and its property. Students will understand the bounded, unbounded and limit suprema and infima. They will use monotone convergence theorem for the calculation of square roots.They observe theconvergent and divergent sequences.They can apply various teststo check the convergence or divergence of sequences and series.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | Understand the basic concepts of Real line and its property. |
|---|---|
| CO2 | Understand the bounded, unbounded and limit suprema and infima. |
| CO3 | Use of monotone convergence theorem for the calculation of square roots. |
| CO4 | Check the convergence and divergence sequences and infinite series. |
| CO5 | Apply the knowledge of various test to establish the convergence and divergence sequences and infinite series. |

**Course Title: Real Analysis**
**Course Code: BSHM-201-22**

## UNIT-I

**Real Numbers:** Field and order structure of R, Bounded above sets, Bounded below sets, Bounded Sets, Unbounded sets, Supremum and Infimum.

## UNIT-II

**Completeness of ℝ:** Completeness Property of R, The Archimedean Property, Density of Rational (and Irrational) numbers in R, Intervals. Limit points of a set, Isolated points, Closed sets, Countable and Uncountable sets.

## UNIT-III

**Sequences:** Sequences, Limit points of a sequence, Limit Inferior and Superior, Convergent Sequences, Non convergent sequences (Definitions), Cauchy's sequence, Cauchy's General Principle of Convergence, Algebra of sequences, Some Important Theorem, [Ref. Text Book 1 ], Monotonic sequences.

## UNIT-IV

**Infinite Series:** Infinite series, convergence and divergence of infinite series, Cauchy Criterion, Tests for convergence: Comparison test, D'Alembert's Ratio Test, Rabb's. Gauss and Logrithmic test (Statement of these three tests only). Cauchy's Root test, Integral test, Alternating series, Leibniz test, Absolute and Conditional convergence.

**TEXT BOOKS:**

1. S. C. Malik and Savita Arora, Mathematical Analysis, New Age International (P) Ltd., New Delhi, 2017.

**RECOMMENDED BOOKS:**

1. R.G. Bartle and D. R. Sherbert, Introduction to Real Analysis, 3rd Ed., John Wiley and Sons (Asia) Pvt. Ltd., Singapore, 2002.
2. Gerald G. Bilodeau , Paul R. Thie, G.E. Keough, An Introduction to Analysis, 2nd Ed., Jones & Bartlett, 2010.
3. Brian S. Thomson, Andrew. M. Bruckner and Judith B. Bruckner, Elementary Real Analysis, Prentice Hall, 2001.
4. S.K. Berberian, A First Course in Real Analysis, Springer Verlag, New York, 1994.

| BSHM-202-22 | **Differential Equations** | **L-4, T-0, P-0** | **4 Credits** |
|---|---|---|---|

**Pre-requisite:** - Functions, Differentiation, Integration.

**Course Objectives:** The Objective of this course is to introduce ordinary differential equations and basic theory ofexistence and uniqueness of solutions. This course further explains the analytic techniques incomputing the solutions of various ordinary differential equations appearing in various fields ofscience and technology.

**Course Outcomes:** At the end of the course, the students will be able to

| CO1 | Understand the basic definitions to know about ordinary differential equations, its various types and their solutions. |
|---|---|
| CO2 | Visualize the geometrical meaning of first order differential equation. |
| CO3 | Understand the fundamental concepts about existence and uniqueness of solution ofinitial value problem. |
| CO4 | Understand the applications of differential equations in different type of Phenomenon. |
| CO5 | Apply power series method to obtain series solutions of differential equations. |

**Mapping of course outcomes with the program outcomes**

| **CO2** | ✓ | ✓ | - | - | ✓ |
| **CO3** | ✓ | ✓ | - | - | ✓ |
| **CO4** | ✓ | ✓ | - | - | ✓ |
| **CO5** | ✓ | ✓ | - | - | ✓ |

**Course Title: Differential Equations**
**Course Code: BSHM-202-22**

## Unit I

**Differential equations:** General, particular, explicit, implicit and singular solutions of a differential equation. Exact differential equations and integrating factors, separable equations and equations reducible to this form, Cauchy's linear equation and Bernoulli equations.

## Unit II

**Mathematical models (Linear Models)**: Introduction to compartmental model, exponential decay model, lake pollution model (case study of Lake Burley Griffin), drug assimilation into the blood (case of a single cold pill, case of a course of cold pills), exponential growth of population, limited growth of population, limited growth with harvesting.

## Unit III

**Higher Order Linear Differential Equations:** General solution of homogeneous equation of second order, principle of super position for homogeneous equation, Wronskian: its properties and applications, Linear homogeneous and non-homogeneous equations of higher order with constant coefficients, Euler's equation, method of undetermined coefficients, method of variation of parameters.

## Unit IV

**Mathematical Models (Non-linear Models):** Equilibrium points, Interpretation of the phase plane, predatory-prey model and its analysis, epidemic model of influenza and its analysis, battle model and its analysis.

**TEXT BOOKS:**

1. J. N. Kapur,, Mathematical Modelling, 1st Ed., New Age International (P) Ltd.,, New Delhi, 2021.

2. Shanti Narayan, Differential Equations and it's Applications,

**RECOMMENDED BOOKS:**

1. Belinda Barnes and Glenn R. Fulford, Mathematical Modeling with Case Studies, A Differential Equation Approach using Maple and MATLAB, 2nd Ed., Taylor and Francis group, London and New York, 2009.
2. C.H. Edwards and D.E. Penny, Differential Equations and Boundary Value problems Computing and Modeling, Pearson Education India, 2005.
3. S.L. Ross, Differential Equations, 3rd Ed., John Wiley and Sons, India, 2004.

| BSHM-203-22 | Programming Lab-II | L-0, T-0, P-2 | 2 Credits |
|---|---|---|---|

**Pre-requisite:** Knowledge of basic concepts in Differential equations and Real analysis, such as, ODE, Order, Degree, Linear Differential Equations, sequence, series, limit point, convergence, divergence, etc.

**Course Objectives:** This course is designed to introduce the basic knowledge of computer programming to simple differential equations and to visualize the convergence and divergence of sequences and series. The major focus of this course will be on understanding the mathematical models behind a real-life situation.

**Course Outcomes:** At the end of the course, the students will be able to

| CO1 | Explain the basic concepts of MATLAB and Mathematica. |
|---|---|
| CO2 | Apply the knowledge of programming in different Differential equations. |
| CO3 | Use programming in plotting the solution and visualization of growth and decay mathematical models. |
| CO4 | Plotting the recursive sequences and study the convergence of sequences through plotting. |
| CO5 | Study the convergence/divergence of infinite series |

**Mapping of course outcomes with the program outcomes**

|  | PSO 1 | PSO 2 | PSO 3 | PSO 4 | PSO 5 |
|---|---|---|---|---|---|
| **CO1** | ✓ | ✓ | ✓ | ✓ | ✓ |
| **CO2** | ✓ | ✓ | ✓ | ✓ | ✓ |
| **CO3** | ✓ | ✓ | ✓ | ✓ | ✓ |

<center>**Course Title: Programming Lab-II**</center>

<center>**Course Code: BSHM-203-22**</center>

The following topics to be practiced using any software:

- vii) Introduce the programming through MATLAB and MATHEMATICA
- viii) Plotting of second order solution family of differential equation.
- ix) Plotting of third order solution family of differential equation.
- x) Growth model (exponential case only).
- xi) Decay model (exponential case only).
- xii) Plotting of recursive sequences.
- xiii) Study the convergence of sequences through plotting.
- xiv) Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify convergent subsequences from the plot.
- xv) Study the convergence/divergence of infinite series by plotting their sequences of partial sum.
- xvi) Cauchy's root test by plotting nth roots.
- xvii) Ratio test by plotting the ratio of nth and (n+1)th term.

**RECOMMENDED BOOKS:**

1. Gilat, A., MATLAB: An Introduction with Applications, 5th Edition. John Wiley & Sons, 2014.
2. Martha L Abell, James P Braselton, Differential Equations with MATHEMATICA, 3rd Ed., Elsevier Academic Press, 2004.

| BHIC-111-22 | CHEMISTRY-I | L-3, T-1, P-0 | Credits:4 |
|---|---|---|---|

**Prerequisite:** Subject knowledge of senior secondary level

| Objective(s): | 1. To teach the fundamental concepts of Inorganic Chemistry and chemical bonding. |
| | 2. To teach the basic principles, chemical reaction and reaction mechanisms of organic compounds. |

At the end of the course, the student will be able to

**CO1.** Understand the fundamental concepts and postulates of various theories regarding the structure of atom

**CO2.** Learn about the various theories pertaining to the different types of bonding

**CO3.** Understand the fundamental concepts of organic chemistry i.e structure, bonding and various effects in organic compounds

**CO4.** To study the various known reactive intermediate in organic synthesis

**CO5.** To learn the fundamental and advanced concepts of reaction mechanisms along with the study of reaction mechanisms in various types of substitution addition and elimination reactions

**Course Title: Chemistry-I**
**Course Code: BHIC-111-22**

## Unit-I

**Atomic Structure:** Bohr's theory and its limitations and atomic spectrum of hydrogen atom. Wave mechanics: deBroglie equation, Heisenberg's Uncertainty Principle and its significance, Schrödinger's wave equation, significance of $\psi$ and $\psi 2$. Quantum numbers and their significance. Radial and angular wave functions for hydrogen atom. Radial and angular distribution curves. Shapes of $s$, $p$, $d$ and $f$ orbitals. Contour boundary and probability diagrams. Pauli's Exclusion Principle, Hund's rule of maximum multiplicity, Aufbau's principle and its limitations.
**Chemical Bonding-I:** Ionic bond: General characteristics, types of ions, size effects, radius ratio rule and its limitations, Packing of ions in crystals, Born-Landé equation with derivation and importance of Kapustinskii expression for lattice energy. Madelung constant, Born-Haber cycle and its application.

## Unit-II

**Chemical Bonding-II:** Covalent bond: Lewis structure, Valence Bond theory (Heitler London approach), Valence shell electron pair repulsion theory (VSEPR), shapes of simple molecules and ions containing lone pairs and bond pairs of electrons, Covalent character in ionic compounds, polarizing power and polarizability. Fajan's rules and consequences of polarization. Molecular orbital theory. Molecular orbital diagrams of diatomic and simple polyatomic molecules $N_2$, $O_2$, $C_2$, $B_2$, $F_2$, CO NO, and their ions.

## Unit-III

**Basics of Organic Chemistry Organic Compounds:**
Classification, and Nomenclature, Hybridization, Influence of hybridization on bond properties. Electronic Displacements: Inductive, electromeric, resonance and mesomeric effects, hyper conjugation and their applications; Dipole moment; Homolytic and Heterolytic fission with suitable examples. Curly arrow rules, Electrophiles and Nucleophiles; Nucleophlicity and basicity; Types, shape and their relative stability of Carbocations, Carbanions, Free radicals and Carbenes.
**Chemistry of Aliphatic Hydrocarbons-I**:
Formation of alkanes, Wurtz Reaction, Wurtz-Fittig Reactions, Free radical substitutions: Halogenation -relative reactivity and selectivity.

## Unit-IV

**Chemistry of Aliphatic Hydrocarbons-II**:
Formation of alkenes and alkynes by elimination reactions, Mechanism of E1, E2, E1cb reactions. Saytzeff and Hofmann eliminations. Reactions of alkenes: Electrophilic additions their mechanisms (Markownikoff/ Anti Markownikoff addition), mechanism of oxymercuration-demercuration, hydroborationoxidation, ozonolysis, reduction (catalytic and chemical).
**Aromatic Hydrocarbons Aromaticity**:
Hückel's rule, aromatic character of arenes, cyclic carbocations/carbanions and heterocyclic compounds with suitable examples. Electrophilic aromatic substitution: halogenation, nitration, sulphonation and Friedel-Craft's alkylation/acylation with their mechanism.

| BHIC-112-22 | **Chemistry Lab-I** | L-0, T-0, P-4 | Credits: 02 |
|---|---|---|---|

**Pre-requisite:** Understanding of senior secondary level Chemistry

**Course Objectives: T**he objective of this course is to provide practical knowledge and illustrative experiments about various types of inorganic titrations and general organic techniques

**Course Outcomes:** At the end of the course, the students will be able to

| CO1 | Learn the quantitative analysis of various metal ions/cations and anions. |
|---|---|
| CO2 | Understand the various principles of different techniques involved in the quantitative analysis. |
| CO3 | Learn the basic qualitative techniques |
| CO4 | Learn chromatographic techniques for the identification and separation of compounds |
| CO5 | Learn about the applications of basic techniques |

| **Mapping of course outcomes with the program outcomes** | | | | | |

| **CO5** | ✓ | ✓ | ✓ | ✓ | ✓ |

**Course Title: Chemistry Lab-I**
**Course Code: BHIC-112-22**

**Part-I**

**(A) Acid-Base Titrations**

(i)      Estimation of carbonate and hydroxide present together in mixture.
(ii)     Estimation of carbonate and bicarbonate present together in a mixture.
(iii)    Estimation of free alkali present in different soaps/detergents

**(B) Oxidation-Reduction Titrations**

(i)      Estimation of Fe(II) and oxalic acid using standardized $KMnO_4$ solution.
(ii)     Estimation of oxalic acid and sodium oxalate in a given mixture.
(iii)    Estimation of Fe(II) with $K_2Cr_2O_7$ using internal (diphenylamine, anthranilic acid) and external indicator.

**Part-II**

(i)      Checking the calibration of the thermometer
(ii)     Purification of organic compounds by crystallization using the following solvents: a) Water b) Alcohol, and c) Alcohol-Water.
(iii)    Determination of the melting points of above compounds and unknown organic compounds (Kjeldahl method and electrically heated melting point apparatus)
(iv)     Effect of impurities on the melting point – mixed melting point of two unknown organic compounds
(v)      Determination of boiling point of liquid compounds. (boiling point lower than and more than 100°C by distillation and capillary method)
(vi)     Chromatography a) Separation of a mixture of two amino acids by ascending and horizontal paper chromatography b) Separation of a mixture of two sugars by ascending paper chromatography, c) Separation of a mixture of o-and p-nitrophenol or o-and p-aminophenol by thin layer chromatography (TLC)

| BBA-GE 201-18 | Managerial Economics II | L-5, T-1, P-0 | 6 Credits |
|---|---|---|---|

**Pre-requisite:** Understanding of basic knowledge of Managerial Economics

**Course Objectives:** This course aims to acquaint students with economy as a whole including measurement of national income, inflation and unemployment, which an objective to inculcate understanding of macroeconomic environment of an economy for better decision making.

**Course Outcomes:** After completion of the course, the students shall be able to:

| CO1 | Explain the concept of national income and its measurement using different approaches. |
|---|---|
| CO2 | Describe the underlying theories of demand and supply of money in an economy. |
| CO3 | Make use of employment and national income statistics students will be able to describe and analyze the economy in quantitative terms. |
| CO4 | Interpret macroeconomic issues like money, inflation and unemployment. |
| CO5 | Identify the phases of the business cycle and the problems caused by cyclical fluctuations in the market economy |

**Course Title: Managerial Economics II**

**Course Code: BBAGE 201-18**

## UNIT-I

National Income: Measuring National Income. Problems in the measurement of National Income. Theories of Money: Nature and functions of money – Types of money: Near money, inside money and outside money. Theories of demand for money – defining demand for money – Classical theories of demand for money – Friedman's re-statement of Quantity Theory of Money; Liquidity preference theory and Keynesian Liquidity Trap. Theories of Supply of money; Defining supply of money; Measuring supply of money.

## UNIT-II

Theories of Inflation and Unemployment: Meaning, Types and Theories of Inflation. - Cost of inflation and sacrifice ratio. - Measurement of Inflation in India - Policies to control inflation Meaning and types of unemployment. - Cost of unemployment and Oakun's Law Measurement of unemployment in India. - Concept of Stagflation - Concept of Philips Curve.

## Unit-III

Business cycle: Meaning, types and phases. Monetary, Fiscal and Income policy – Meaning and instruments. Multiplier: Concept, Features and Leakages. Foreign trade multiplier.

## Unit-IV

Macro-economic Framework in Indian Economy–Public Finance–Tax system in India– Financial Administration: Finance Commission.

**RECOMMENDED BOOKS:**

1. Ahuja, H.L.(2015) Macroeconomics-Theory and Policy. New Delhi: Sultan Chand.

2. Jhingan, M.L. (2016) Macro Economic Theory. Delhi: Vrinda Publications Pvt. Ltd

3. Dwivedi, D.N.(2017)Macroeconomics: Theory and Practice: Theory & Practice. New Delhi: McGraw Hill.

4. Jain, T.R., Khanna, O.P.(2014) Managerial Economics: V.K. Publications

5. Dewett, K.K., Navalur, M.H., (2006) Modern Economic Theory: New Delhi: Sultan Chand.

**SEMESTER-III**

| BSHM-301-22 | Theory of Real Functions | L-5, T-1, P-0 | 6 Credits |
|---|---|---|---|

**Pre-requisite:** Sequences and Series

**Course Objectives:** The objectives of this course are to:
1. Introduce basic concepts of theory of real functions from theoretical point of view and also to explore important applications.
2. Develop analytical and computational skills of students.
3. Introduce sequential criterion for limits and continuity.
4. Discuss derivative and its applications.
5. Introduce Taylor's theorem with its different forms of remainder and also to explore its various applications.
6. Introduce Fourier series representation of certain functions.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | Deal with the basic concepts of real analysis rigorously. |
|---|---|
| CO2 | Use the concepts of limit, continuity and derivative in different fields of study. |
| CO3 | Apply Taylor series in approximating functions, deal with certain inequalities and convex function. |
| CO4 | Understand different forms of remainder term of Taylor series and also to utilize these remainder terms to assess the error in approximations. |
| CO5 | Expand certain functions in terms of Fourier series. |

| CO1 | ✓ | ✓ | - | - | ✓ |
| CO2 | ✓ | ✓ | - | - | ✓ |
| CO3 | ✓ | ✓ | - | - | ✓ |
| CO4 | ✓ | ✓ | - | - | ✓ |
| CO5 | ✓ | ✓ | - | - | ✓ |

**Course Title: Theory of Real Functions**
**Course Code: BSHM-301-22**

## UNIT-I

Limits of functions ($\epsilon - \delta$ approach), sequential criterion for limits, divergence criteria. Limit theorems, one sided limits. Infinite limits and limits at infinity. Continuous functions, sequential criterion for continuity, discontinuity criterion. Algebra of continuous functions. Continuous functions on an interval, intermediate value theorem, location of roots theorem, preservation of intervals theorem. (Scope: Section 4.1, 4.2, 4.3, 5.1,5.2, 5.3 of Textbook: Bartle et al. [1]).

## UNIT-II

Uniform continuity, non-uniform continuity criteria, uniform continuity theorem, Lipschitz condition, continuous extension theorem, Weierstrass approximation theorem (without proof), Differentiability of a function at a point and in an interval, Caratheodory's theorem, Chain rule, Darboux's theorem. (Scope: Section 5.4.1-5.4.8, 6.1, 6.2.12 of Textbook: Bartle et al. [1]).

## UNIT-III

Taylor polynomial, Taylor's theorem, estimate of error in approximating a function, convex function, application of Taylor theorem to inequalities and convex functions. (Scope: Section 6.4.1, 6.4.2,6.4.3, 6.4.5, 6.4.6 of Textbook: Bartle et al. [1]).

Inner product of functions, orthogonal functions, orthogonal set of functions, orthonormal set of functions, periodic functions, piecewise continuous function, even and odd functions. (Scope: Section 12.1 of Textbook: Zill [2]).

## UNIT-IV

Trigonometric series, Fourier series, sufficient conditions for convergence of a Fourier series, sequence of partial sums of Fourier series, Fourier cosine series, Fourier sine series, Gibbs phenomenon, half range expansions. (Scope: Section 12.2,12.3 of Textbook: Zill [2]).

**TEXT BOOKS**

1. R. Bartle and D.R. Sherbert, Introduction to Real Analysis, John Wiley and Sons, 2003.

2. Dennis G. Zill, Advanced Engineering Mathematics, 6th Edition, Jones and Bartlett

   Publishers, 2016.

3. Shanti Narayan, M. D. Raisinghania, Elements of Real Analysis, 14th Revised Edition, S. Chand & Company LTD, New Delhi, 2013.

**RECOMMENDED BOOKS:**

1. K.A. Ross, Elementary Analysis: The Theory of Calculus, Springer, 2004.

2. A. Mattuck, Introduction to Analysis, Prentice Hall, 1999.

3. S.R. Ghorpade and B.V. Limaye, A Course in Calculus and Real Analysis, Springer, 2006.

| BSHM-302-22 | Group Theory I | L-5, T-1, P-0 | 6 Credits |
|---|---|---|---|

**Pre-requisite:** Set Theory

**Course Objectives:** The main aim of the course is to introduce the students to basic concepts from abstract algebra, especially the notion of a group. The course will help prepare you for further study in abstract algebra as well as familiarize you with tools essential in many other areas of mathematics. The other aim of this course is to provide the learner with the skills, knowledge and competencies to carry out their duties and responsibilities in a pure Mathematical environment.

Course Outcomes: At the end of the course, the students will be able to

| | |
|---|---|
| CO1 | learn the basic concepts like groups, subgroups, cyclic groups, normal subgroups, homomorphisms, etc. |
| CO2 | learn about binary operations on algebraic structures which are quite significant in modern mathematics. |
| CO3 | understand the theorems of group isomorphisms and isomorphisms. |
| CO4 | be acquainted with prerequisite knowledge required to learn advanced algebra. |
| CO5 | apply the learnt techniques in modern algebra. |

| CO4 | ✓ | ✓ | - | - | ✓ |
| CO5 | ✓ | ✓ | - | - | ✓ |

**Course Title: Group Theory I**
**Course Code: BSHM-302-22**

### UNIT-I

**Groups:** Symmetries of a square, Dihedral groups, definition and examples of groups including permutation groups and quaternion groups (illustration through matrices), elementary properties of groups.

### UNIT-II

**Subgroups:** Subgroups and examples of subgroups, properties of subgroups, centralizer, center of a group, product of two subgroups, inverse of a subset of a group.

**Cosets:** Properties of cosets, Lagrange's theorem and consequences including Fermat's Little theorem, Euler's $\phi$-function.

### UNIT-III

**Cyclic groups:** Properties of cyclic groups, subgroups of cyclic groups, generators of cyclic group, important theorem on cyclic groups.

**Normal Subgroups:** Normal subgroups and their properties, examples of normal subgroups, product of two normal subgroups, normalizer of a subset of a group, quotient groups.

### UNIT-IV

**Group homomorphisms:** Properties of homomorphisms, Cayley's theorem, properties of isomorphisms, First, Second and Third isomorphism theorems.

**Text Book:**

1. V. Khanna and S.K. Bhambari, Abstract Algebra, 5th Ed., Vikas Publishing House, New Delhi, 2016.

**Books Recommended:**

1. John B. Fraleigh, A First Course in Abstract Algebra, 7th Ed., Pearson, 2002.
2. M. Artin, Abstract Algebra, 2nd Ed., Pearson, 2011.
3. Joseph A. Gallian, Contemporary Abstract Algebra, 4th Ed., Narosa Publishing House, New Delhi, 1999.
4. Joseph J. Rotman, An Introduction to the Theory of Groups, 4th Ed., Springer Verlag, 1995.
5. I.N. Herstein, Topics in Algebra, Wiley Eastern Limited, India, 1975.

| BSHM-303-22 | Multivariable Calculus | L-5, T-1, P-0 | 2 Credits |
|---|---|---|---|
| **Pre-requisite:** Sets, Binary operations | | | |

**Course Objectives:** The main aim of the course is to introduce the students to the basic concepts of several variable functions, limit, continuity, differentiability, partial derivatives, gradient, divergence, curl, multiple integrals. They will be able to apply the acquired knowledge to find center of mass, volume of solids, areas of surfaces etc.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | learn the basic concepts like several variable functions, limit continuity, differentiability, partial derivatives, etc. |
|---|---|
| CO2 | learn about Lagrange multiplier method. |
| CO3 | understand the concept of the directional derivatives, curl, divergence, gradient, etc. |
| CO4 | be acquainted with the properties of multiple integrals, change of coordinates to polar coordinates. |
| CO5 | apply the learnt techniques to find center of mass, volume of solids, areas of surfaces, etc |

Use of Scientific calculator is allowed.

**Course Title: Multivariable Calculus**
**Course Code: BSHM-303-22**

## UNIT-I

Functions of several variables, limit and continuity of functions of two variables Partial differentiation, total differentiability and differentiability, sufficient condition for differentiability. Chain rule for one and two independent parameters, Extrema of functions of two variables, method of Lagrange multipliers, constrained optimization problems.

## UNIT-II

Double integration over rectangular region, double integration over non-rectangular region, double integrals in polar co-ordinates, Triple integrals, Triple integral over a parallelepiped and solid regions. Volume by triple integrals, cylindrical and spherical co-ordinates, change of variables in double integrals and triple integrals.

## UNIT-III

Definition of vector field, divergence and curl, directional derivatives, the gradient, maximal and normal property of the gradient, tangent planes, line integrals, applications of line integrals.

## UNIT-IV

Green's theorem, Stoke's theorem, Divergence theorem, their applications.

**Books Recommended**

| BSHM-304-22 | Logic and Sets | L-2, T-0, P-0 | 2 Credits |
|---|---|---|---|

**Pre-requisite:** Sets, Binary operations

**Course Objectives:** The main aim of the course is to introduce the students to basic concepts from sets and logical operations. The course will help prepare the student to understand the relations between sets regarding membership, equality, subset, and proper subset, using proper notation. Perform the operations of union, intersection, complement, and difference on sets using proper notation.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | learn the basic concepts like propositions, truth table, negation, conjunction and disjunction. Implications, biconditional propositions, etc. |
|---|---|
| CO2 | learn about Propositional equivalence, Logical equivalences, Predicates and quantifiers, Binding variables and Negations. |
| CO3 | understand the concept of sets, subsets, set operations and the laws of set theory and Venn diagrams. |
| CO4 | be acquainted with the properties of product set, Composition of relations, Types of relations, Partitions, Equivalence Relations |
| CO5 | apply the learnt techniques in computer algebra. |

| **Mapping of course outcomes with the program outcomes** | | | | | |
|---|---|---|---|---|---|
| | **PSO 1** | **PSO 2** | **PSO 3** | **PSO 4** | **PSO 5** |
| **CO1** | ✓ | ✓ | ✓ | ✓ | ✓ |

| **CO3** | ✓ | ✓ | ✓ | ✓ | ✓ |
| **CO4** | ✓ | ✓ | ✓ | ✓ | ✓ |
| **CO5** | ✓ | ✓ | ✓ | ✓ | ✓ |

**Course Title: Logic and Sets**
**Course Code: BSHM-304-22**

## UNIT-I

**Logic and Sets:** Introduction, propositions, truth table, negation, conjunction and disjunction. Implications, biconditional propositions, converse, contra positive and inverse propositions and precedence of logical operators. Propositional equivalence, Logical equivalences.

**Predicates and quantifiers:** Introduction, Quantifiers, Binding variables and Negations.

## UNIT-II

Sets, subsets, Set operations and the laws of set theory and Venn diagrams. Examples of finite and infinite sets. Finite sets and counting principle. Empty set, properties of empty set. Standard set operations. Classes of sets. Power set of a set. Difference and Symmetric difference of two sets. Set identities, Generalized union and intersections.

**Relation:** Product set, Composition of relations, Types of relations, Partitions, Equivalence Relations with example of congruence modulo relation, Partial ordering relations, $n$-ary relations.

**Books Recommended**:

1. R.P. Grimaldi, Discrete Mathematics and Combinatorial Mathematics, Pearson Education, 1998.
2. P.R. Halmos, Naive Set Theory, Springer, 1974. 3. E. Kamke, Theory of Sets, Dover Publishers, 1950.

| PHYSICS-C-6 | BSHP-212-21 | Elements of modern physics | L-3, T-1, P-0 | 4 Credits |
|---|---|---|---|---|

**Pre-requisite:** Understanding of senior secondary level Physics and Mathematics

**Course Objectives:** The course content covers foundations of modern physics, experiments forming basis of quantum mechanics, Schrodinger equation and applications, uncertainty principle and applications. The topics covered in the course build a foundation of undergraduate physics students to study the advance branches: quantum physics, nuclear physics, particle physics and high energy physics.

**Course Outcomes:** At the end of the course, the student will be able to

| CO1 | Understand the implication of special theory of relativity. |
|---|---|
| CO2 | Understand and explain the differences between classical and quantum mechanics. |
| CO3 | Identify properties of the nucleus and other sub-atomic particles. |
| CO4 | Assess whether a solution to a given problem is physically reasonable and solve Schrodinger equation for simple potentials. |
| CO5 | Describe theories explaining the structure of atoms and the origin of the observed spectra. |

| CO5 | - | ✓ | - | - | ✓ |

**Detailed Syllabus:**

*PART-A*

**UNIT -I**
**Special Theory of Relativity**: Michelson-Morley Experiment and its outcome, Postulates of Special Theory of Relativity, Lorentz Transformations. Simultaneity and order of events, Lorentz contraction, Time dilation. Relativistic transformation of velocity, frequency, and wave number. Relativistic addition of velocities. Variation of mass with velocity, Massless Particles, Mass-energy Equivalence. Relativistic Doppler effect, Relativistic Kinematics. Transformation of Energy and Momentum. Energy-Momentum Four Vector. **(10 Lectures)**

**UNIT-II**
**Particle Properties of Waves:** Electromagnetic waves, Blackbody Radiation, ultraviolet catastrophe, Rayleigh-Jeans formula, Planck radiation hypothesis, Photoelectric Effect, Compton Scattering, Quantum theory of light: wave and particle nature, X-Rays, X-Ray Diffraction, determination of wavelengths using Compton Effect, Pair-Production. **(10 Lectures)**

*PART-B*
**UNIT-III**

**Dual Nature of Waves and Particles:** Waves of probability, Description of a Waves in general, Group and Phase velocities and relation between them, De Broglie wavelength, wave-particle duality, Matter waves, Davisson-Germer experiment, Two-Slit experiment with electrons, gamma ray microscope thought experiment, Heisenberg uncertainty principle: Derivation and applications- impossibility of a particle following a trajectory, estimating minimum energy of a confined particle; Energy-time uncertainty principle- application to virtual particles and range of interaction.

**(10 Lectures)**

**UNIT-IV**
**Introduction to Quantum mechanics**: Need for Quantum mechanics, Wave description of particles by wave packets, Physical interpretation of a wave function: Born interpretation, probabilities, and normalization time-dependent and time-independent Schrodinger equation for wave function, Solution of stationary-state Schrodinger equation for one dimensional problem: particle in a box.
**(10 Lectures)**

| PHYSICS-C | BSHP-213-21 | PHYSICS LAB-III | L-0, T-0, P-4 | 2 Credits |
|---|---|---|---|---|

**Pre-requisite:** Understanding of senior secondary level Physics and Mathematics

**Course Objectives:** *The laboratory experiments forming basis of quantum mechanics, photoelectric effect, ionization potential, absorption and emission spectra, diffraction, and tunneling effect.*

**Course Outcomes:** At the end of the course, the student will be able to

| | |
|---|---|
| **CO1** | Able to verify the theoretical concepts/laws learnt in theory courses. |
| **CO2** | Trained in carrying out precise measurements and handling sensitive equipment. |
| **CO3** | Understand the methods used for estimating and dealing with experimental uncertainties and systematic "errors". |
| **CO4** | Learn to draw conclusions from data and develop skills in experimental design. |
| **CO5** | Document a technical report which communicates scientific information in a clear and concise manner. |

**Mapping of course outcomes with the program outcomes**

**Detailed Syllabus:**

**Note: Students are expected to perform 8-10 experiments from the list taking at least 2-3 from the virtual lab.**

**List of experiment:**
1. Measurement of Planck's constant using black body radiation and photo-detector.
2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photoelectrons versus frequency of light.
3. To determine work function of material of filament of directly heated vacuum diode.
4. To determine the Planck's constant using LEDs of at least 4 different colours.
5. To determine the wavelength of H-alpha emission line of Hydrogen atom.
6. To determine the ionization potential of mercury.
7. To determine the absorption lines in the rotational spectrum of Iodine vapour.
8. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
9. To setup the Millikan oil drop apparatus and determine the charge of an electron.
10. To show the tunneling effect in tunnel diode using I-V characteristics.
11. To determine (i) wavelength and (ii) angular spread of a laser using plane diffraction grating.
12. Dependence of scattering angle on kinetic energy and impact parameter in Rutherford scattering (mechanical analogue).
13. Measurement of the electrical and thermal conductivity of copper to determine its Lorentz number.
14. To determine energy band gap of a given semiconductor.

3. A Text Book of Practical Physics, I. Prakash & Ramakrishna, 11th Edn, 2011, Kitab Mahal.

| UGCA1914 | Programming in Python | L-3, T-1, P-0 | 4 Credits |
|---|---|---|---|

**Pre-requisite:** NA

**Course Objectives:** The main aim of the course is to introduce the students to basic concepts from Python.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | Familiar with Python environment, data types, operators used in Python. |
|---|---|
| CO2 | Compare and contrast Python with other programming languages. |
| CO3 | Learn the use of control structures and numerous native data types with their methods. |
| CO4 | Design user defined functions, modules, and packages and exception handling methods. |
| CO5 | Create and handle files in Python and learn Object Oriented Programming Concepts. |

**Course Title: Programming in Python**
**Course Code: UGCA-1914**

### UNIT-I

Introduction to Python Programming Language: Programming Language, History and Origin of Python Language, Features of Python, Limitations, Major Applications of Python, Getting, Installing Python, Setting up Path and Environment Variables, Running Python, First Python Program, Python Interactive Help Feature, Python differences from other languages. Python Data Types & Input/Output: Keywords, Identifiers, Python Statement, Indentation, Documentation, Variables, Multiple Assignment, Understanding Data Type, Data Type Conversion, Python Input and Output Functions, Import command. Operators and Expressions: Operators in Python, Expressions, Precedence, Associativity of Operators, Non Associative Operators. (12)

### UNIT-II

Control Structures: Decision making statements, Python loops, Python control statements. Python Native Data Types: Numbers, Lists, Tuples, Sets, Dictionary, Functions & Methods of Dictionary, Strings (in detail with their methods and operations). (10)

### UNIT-III

Python Functions: Functions, Advantages of Functions, Built-in Functions, User defined functions, Anonymous functions, Pass by value Vs. Pass by Reference, Recursion, Scope and Lifetime of Variables. Python Modules: Module definition, Need of modules, Creating a module, Importing module, Path Searching of a Module, Module Reloading, Standard Modules, Python Packages. (12)

### UNIT-IV

Exception Handling: Exceptions, Built-in exceptions, Exception handling, User defined exceptions in Python. File Management in Python: Operations on files (opening, modes, attributes, encoding, closing), read() & write() methods, tell() & seek() methods, renaming & deleting files in Python, directories in Python. (10)
Classes and Objects: The concept of OOPS in Python, Designing classes, Creating objects, Accessing attributes, Editing class attributes, Built-in class attributes, Garbage collection, Destroying objects.

**Text Books:**

1. Pooja Sharma, Programming in Python, BPB Publications, 2017. 2. R. Nageswara Rao, Core Python Programming, 2nd Edition, Dreamtech.

**Recommended Books:**

1. Martin C. Brown ,Python, The complete Reference , Mc Graw Hill Education.
2. A. Martelli, A. Ravenscroft and S. Holden, Python in a Nutshell, OREILLY.

**SEMESTER-IV**

| BSHM-401-22 | Numerical Methods | L-4, T-0, P-0 | 4 Credits |
|---|---|---|---|

**Pre-requisite:** Differential and Integral Calculus

**Course Objectives:** The objectives of this course are to:
1. Introduce numerical methods for solving continuous problems which are difficult to deal with analytically.
2. Develop analytical and computational skills of students.
3. Introduce methods to deal with nonlinear equations, system of linear algebraic equations.
4. Introduce methods for constructing interpolating polynomials.
5. Introduce methods to deal with numerical differentiation, numerical integration and ordinary differential equations.
6. Develop understating of computational mathematics and also to demonstrate its importance in science and engineering.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | Find approximate numerical solutions of nonlinear equations and system of linear algebraic equations. |
|---|---|
| CO2 | Develop and use interpolating polynomials when explicit form of the function of interest is not known or complicated to deal with. |
| CO3 | Deal with differentiation and definite integral problems approximately when it is difficult to get exact evaluation of these. |
| CO4 | Apply the numerical methods for solving ordinary differential equations when it is difficult to deal with them analytically. |
| CO5 | Apply the understanding of computational techniques in dealing with real world problems occurring in science and engineering. |

**Course Title: Numerical Methods**
**Course Code: BSHM-401-22**

**UNIT-I**

Computer representation of numbers, scientific notation, accuracy of numbers, errors and its different types, estimation of errors, propagation of errors, the concepts of stability and condition number. Algorithms and convergence.

Polynomial and transcendental equations: Bisection method, Newton-Raphson's method, Secant method, Regula-Falsi method, General iteration method, Rate of convergence.

**UNIT-II**

System of linear algebraic equations, Gaussian elimination method, Gauss-Jordan method. Iterative methods: Gauss Jacobi method, Gauss-Seidel method and their convergence analysis.

Interpolation, Lagrange interpolation, Newton's divided difference interpolation, Gregory-Newton's forward and Gregory-Newton's backward difference interpolation formulas, Error in interpolation.

**UNIT-III**

Numerical differentiation: methods based on finite differences. Numerical integration: Midpoint rule, Trapezoidal rule, Simpson's rule, Simpson's $\frac{3}{8}$-rule, Boole's rule, composite Trapezoidal rule, composite Simpson's rule.

**UNIT-IV**

Ordinary differential equations, Taylor series method, Euler's methods, Runge-Kutta methods, linear multi-step methods: Adams-Bashforth methods, Adams-Moulton methods and Milne-Simpson's method.

**TEXT BOOKS**

1. M. K. Jain. S. R.K. Iyengar and R. K. Jain, Numerical Methods for Scientific and Engineering Computation, 7th Ed., 2019.
2. Richard L. Burden and J. Douglas Faires, Numerical Analysis, 9th Edition, Cengage Learning, 2012.

**RECOMMENDED BOOKS:**
1. Brian Bradie, A Friendly Introduction to Numerical Analysis, Pearson Education, 2007.
2. K. E. Atkinson, An Introduction to Numerical Analysis, 2nd Ed., Wiley, 1989.
3. C.F. Gerald and P.O. Wheatley, Applied Numerical Analysis, Pearson Education, India, 2008.
4. Uri M. Ascher and Chen Greif, A First Course in Numerical Methods, 7th Ed., PHI Learning Private Limited, 2013.
5. John H. Mathews and Kurtis D. Fink, Numerical Methods using Matlab, 4th Ed., PHI Learning Private Limited, 2012.

| BSHM-402-22 | Riemann Integration and Series of Functions | L-5, T-1, P-0 | 4 Credits |
|---|---|---|---|

**Pre-requisite:** Functions, limit, continuity, differentiability, integrability, sequence and series

**Course Objectives:** The objectives of this course are to make the students understand the following:
1. Riemann integration and their basic properties, Fundamental theorems of Calculus.
2. Pointwise and uniform convergence of sequence of functions
3. Series and infinite series of functions.
4. Tests for uniform convergence of a series.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | Define Riemann Stieltjes integral and illustrate the properties of integration and differentiation |
|---|---|
| CO2 | Acquire the knowledge of sequence and series. |
| CO3 | Have the knowledge of uniformly convergence of series by different Test. |
| CO4 | Apply the differentiation to find out the maximum and minimum value of functions. |
| CO5 | To understand the statement and prove of important theorems. |

## Course Title: Riemann Integration and Series of Functions
## Course Code: BSHM-402-22

### UNIT-I

Riemann integration; inequalities of upper and lower sums; Riemann conditions of integrability. Riemann sum and definition of Riemann integral through Riemann sums; equivalence of two definitions;

### UNIT-II

Riemann integrability of monotone and continuous functions, Properties of the Riemann integral; definition and integrability of piecewise continuous and monotone functions. Intermediate Value theorem for Integrals; Fundamental theorems of Calculus. Improper integrals; Convergence of Beta and Gamma functions.

### UNIT-III

Pointwise and uniform convergence of sequence of functions; Cauchy's general principle of uniform convergence, A test for uniform convergence of sequence of functions, Countinuity of the uniform limit of a uniformly convergent sequence of continuous functions, Integrability of uniform limit of a uniformly convergent sequence of integrable functions. Derivability of the point-wise limit of a sequence of derivable functions if the derivatives are continuous and the sequence of derivatives is uniformly convergent

### UNIT-IV

Infinite Series of functions, Test for uniform convergence of a series; Cauchy's general principle of convergence and Weierstrass M-Test for uniform convergence. Abel's test and Dirichlet's test. Weierstrass Approximation Theorem.

### RECOMMENDED BOOKS

1. Shanti Narayan, Dr. M.D. Raisinghania, Elements of Real Analysis, S. Chand & Company, New Delhi.

2. K.A. Ross, Elementary Analysis, The Theory of Calculus, Undergraduate Texts in Mathematics, Springer (SIE), Indian reprint, 2004.

3. R.G. Bartle D.R. Sherbert, Introduction to Real Analysis, 3rd Ed., John Wiley and Sons (Asia) Pvt. Ltd., Singapore, 2002.

4. Charles G. Denlinger, Elements of Real Analysis, Jones & Bartlett (Student Edition), 2011.

| BSHM-403-22 | Ring Theory and Linear Algebra I | L-5, T-1, P-0 | 6 Credits |
|---|---|---|---|

**Pre-requisite:** Set Theory, Group Theory

**Course Objectives:** The main aim of the course is to introduce the students to basic concepts from abstract algebra, especially the notion of a ring and vector space. The course will help prepare you for further study in abstract algebra as well as familiarize you with tools essential in many other areas of mathematics. The other aim of this course is to provide the learner with the skills, knowledge and competencies to carry out their duties and responsibilities in a pure Mathematical environment.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | learn the basic concepts like groups, subgroups, cyclic groups, normal subgroups, homomorphisms, etc. |
|---|---|
| CO2 | learn about binary operations on algebraic structures which are quite significant in modern mathematics. |
| CO3 | understand the theorems of group isomorphisms and isomorphisms. |
| CO4 | be acquainted with prerequisite knowledge required to learn advanced algebra. |
| CO5 | apply the learnt techniques in modern algebra. |

**Mapping of course outcomes with the program outcomes**

| CO1 | ✓ | ✓ | - | - | ✓ |
| CO2 | ✓ | ✓ | - | - | ✓ |
| CO3 | ✓ | ✓ | - | - | ✓ |
| CO4 | ✓ | ✓ | - | - | ✓ |
| CO5 | ✓ | ✓ | - | - | ✓ |

**Course Title: Ring Theory and Linear Algebra I**
**Course Code: BSHM-403-22**

### UNIT-I

**Ring Theory:** Definition and examples of rings, properties of rings, integral domains and fields, characteristic of a ring,

**Subrings and Ideals:** subrings, ideals, ideal generated by a subset of a ring, operations on ideals, principal, prime and maximal ideals.

### UNIT-II

**Ring Homomorphism:** Quotient rings, Ring homomorphisms, properties of ring homomorphisms, Isomorphism theorems I, II and III.

### UNIT-III

**Vector Spaces:** Vector spaces, vector subspaces, algebra of subspaces, disjoint subspaces, linear combination of vectors, linear span, linear independence, basis and dimension, dimension of subspaces, cosets of subspaces, quotient spaces, dimension of quotient spaces.

### UNIT-IV

**Linear transformations**: Linear transformation, matrix representation of a linear transformation, properties of linear transformations, null space, range, rank and nullity of a linear transformation, algebra of linear transformations. Isomorphisms invertibility and isomorphisms, matrix of a linear transformation with respect to basis.

**Text Book:**

1. V. Khanna and S.K. Bhambari, Abstract Algebra, 5th Ed., Vikas Publishing House, New Delhi, 2016.

**Books Recommended:**

1. John B. Fraleigh, A First Course in Abstract Algebra, 7th Ed., Pearson, 2002.
2. M. Artin, Abstract Algebra, 2nd Ed., Pearson, 2011.
3. Stephen H. Friedberg, Arnold J. Insel, Lawrence E. Spence, Linear Algebra, 4th Ed., Prentice Hall of India Pvt. Ltd., New Delhi, 2004.
4. Joseph A. Gallian, Contemporary Abstract Algebra, 4th Ed., Narosa Publishing House, New Delhi, 1999.
5. S. Lang, Introduction to Linear Algebra, 2nd Ed., Springer, 2005.
6. Gilbert Strang, Linear Algebra and its Applications, Thomson, 2007.

8. Kenneth Hoffman, Ray Alden Kunze, Linear Algebra, 2nd Ed., Prentice-Hall of India Pvt. Ltd., 1971.
9. D.A.R. Wallace, Groups, Rings and Fields, Springer Verlag London Ltd., 1998

**Course Title: Programming Lab-III**
**Course Code: BSHM-404-22**

**List of Practicals (using any software)**

1. Calculate the sum $1/1 + 1/2 + 1/3 + 1/4 + $ ----------$+ 1/ N$.

2. To find the absolute value of an integer.

3. Enter 100 integers into an array and sort them in ascending order.

4. Bisection Method.

5. Newton Raphson Method.

6. Secant Method.

7. Regulai Falsi Method.

8. LU decomposition Method.

9. Gauss-Jacobi Method.

10. SOR Method or Gauss-Siedel Method.

11. Lagrange Interpolation or Newton Interpolation.

12. Simpson's rule.

**RECOMMENDED BOOKS:**

1. John H. Mathews and Kurtis D. Fink, Numerical Methods using Matlab, 4th Ed., PHI Learning Private Limited, 2012.

25

| BSHM-405-22 | Graph Theory | L-2, T-0, P-0 | 2 Credits |
|---|---|---|---|

**Pre-requisite:** Sets, Binary operations

**Course Objectives:** The main aim of the course is to introduce the students to the basic concepts of graphs, pseudo graphs, complete graphs, bi-partite graphs, isomorphism of graphs. They will be able to identify edges and vertices, find the degree of a vertex, express travelling salesman's problem.

Course Outcomes: At the end of the course, the students will be able to

| CO1 | learn the basic concepts like graphs, pseudo graphs, complete graphs, bi-partite graphs, isomorphism of graphs, etc. |
|---|---|
| CO2 | learn about Eulerian circuits, Hamiltonian cycles. |
| CO3 | understand the concept of the adjacency matrix, weighted graph, travelling salesman's problem. |
| CO4 | be acquainted with the properties of shortest path, Dijkstra's algorithm, Floyd-Warshall algorithm. |
| CO5 | apply the learnt techniques in computer algebra. |

**Course Title: Graph Theory**
**Course Code: BSHM-405-22**

## UNIT-I

**Graphs:** Definition, examples and basic properties of graphs, pseudo graphs, complete graphs, bi-partite graphs, isomorphism of graphs.

## UNIT-II

**Paths and Circuits:** Introduction with examples, Eulerian circuits, Hamiltonian cycles, the adjacency matrix, weighted graph, travelling salesman's problem, shortest path, Dijkstra's algorithm, Floyd-Warshall algorithm.

**Books Recommended**:

1. B.A. Davey and H.A. Priestley, Introduction to Lattices and Order, Cambridge University Press, Cambridge, 1990.
2. Edgar G. Goodaire and Michael M. Parmenter, Discrete Mathematics with Graph Theory, 2nd Edition, Pearson Education (Singapore) P. Ltd., Indian Reprint 2003.
3. Rudolf Lidl and Gunter Pilz, Applied Abstract Algebra, 2nd Ed., Undergraduate Texts in Mathematics, Springer (SIE), Indian reprint, 2004.

| BHIC-211-22 | Chemistry-II | L-3, T-1, P-0 | Credits: 4 |
|---|---|---|---|

**Pre-requisite:** Understanding of senior secondary level chemistry

**Course Objectives:** This course will equip students with the necessary knowledge concerning the fundamentals in the basic areas of physical chemistry viz. different states of matter, solutions, and ionic equilibrium. The problem-solving skills of students are expected to be enhanced through due weightage given to numerical problems in each unit.

**Course Outcomes:** At the end of the course, the student will be able to

| CO1 | Understand the basic principles and theories pertaining to different states of matter |
|---|---|
| CO2 | Solve various problems related to pH |
| CO3 | Define the various laws pertaining to gaseous state and solutions. |
| CO4 | Familiarize with the different colligative properties of solutions and the concept of abnormal molecular mass |
| CO5 | Understand the basic structure and symmetry elements in solids |

**Mapping of course outcomes with the program outcomes**

|  | PO1 | PO2 | PO3 | PO4 | PO5 |
|---|---|---|---|---|---|
| CO1 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO2 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO3 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO4 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO5 | ✓ | ✓ | ✓ | ✓ | ✓ |

**Course Title: Chemistry-II**
**Course Code: BHIC-211-22**

## UNIT-I

**States of Matter:** The kinetic molecular theory of gases, Postulates and derivation of kinetic gas equation and various gas laws, The ideal gas law: Applications, Behaviour of real gases: Deviations from ideal gas behaviour, compressibility factor, Z and its variation with pressure for different gases. Causes of deviation from ideal behavior. Van der Waals equation of state, its derivation and application in explaining real gas behaviour. Critical state, relation between critical constants and vander Waal constants, Numericals based on above concepts.

## UNIT-II

**Liquid and Solid State:** Physical properties of liquids; vapour pressure, surface tension and its effects, coefficient of viscosity and effect of temperature and pressure. Liquid Crystals: their types and applications. Nature of the solid state, law of constancy of interfacial angles, law of rational indices, Miller indices, elementary ideas of symmetry, symmetry elements and symmetry operations, qualitative idea of point and space groups, seven crystal systems and fourteen Bravais lattices; X-ray diffraction, Bragg's law. Defects in Crystals.

## UNIT-III

**Ionic equilibria:** Concept of Acids and Bases, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect; dissociation constants of mono-, di-and triprotic acids. Buffer solutions; buffer capacity, buffer range, buffer action. Salt Hydrolysis, Acid Base Titrations, Solubility and solubility product of sparingly soluble salts – applications of solubility product principle.

## UNIT-IV

**Solutions and Colligative Properties:** Ways of expressing the concentration, Colligative properties: derivation of expression and determination of molecular masses (i) relative lowering of vapour pressure, Raoult's Law. (ii) elevation of boiling point, (iii) Depression of freezing point, (iv) osmotic pressure, effects of Osmosis and Semi permeability, Reverse Osmosis. Applications in calculating molar masses of normal, dissociated, and associated solutes in solution, Van't Hoff Factor, Numerical problems based on above concepts.

**RECOMMENDED BOOKS:**
1. P.W. Atkins & J. de Paula, Atkin's Physical Chemistry, Oxford University Press (2006).
2. S.H. Maron & C.F. Prutton, Principles of Physical Chemistry, 1$^{st}$ edition, Oxford and IBH (1958).
3. G.W. Castellan, Physical Chemistry, 4$^{th}$ edition, Narosa (2004)
4. I.N. Levine, Physical Chemistry 6$^{th}$ Ed., Tata Mc Graw Hill (2010)
5. T. Engel & P. Reid, Physical Chemistry 3$^{rd}$ Ed., Prentice-Hall (2012)

| BHIC-212-22 | Chemistry Lab-II | L-0, T-0, P-4 | Credits: 02 |
|---|---|---|---|

**Pre-requisite:** Understanding of senior secondary level Chemistry

**Course Objectives:** To provide students practical knowledge and skills about various topics taught in theory class of physical chemistry, which in turn will enhance their problem solving and analytical skills.

**Course Outcomes:** At the end of the course, the students will be able to

| | |
|---|---|
| CO1 | Understand the basic procedures for carrying out a physical chemistry practical like preparation and standardization of solutions, handling the equipment and measuring with precision. |
| CO2 | Correlate the theoretical and practical aspects and know about the limits of the experimental error. |
| CO3 | Determine the various physical parameters for the various problems under consideration. |
| CO4 | Verify various laws studied in the theory part. |

**Mapping of course outcomes with the program outcomes**

| | PSO1 | PSO2 | PSO3 | PSO4 | PSO5 |
|---|---|---|---|---|---|
| CO1 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO2 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO3 | ✓ | ✓ | ✓ | ✓ | ✓ |
| CO4 | ✓ | ✓ | ✓ | ✓ | ✓ |

**Course Title: Chemistry Lab-II**
**Course Code: BHIC-212-22**

## UNIT-I

Preparation and Standardization of Solutions.

## UNIT-II

Surface tension measurements.
a) Determine the surface tension by (i) drop number (ii) drop weight method.
b) Study the variation of surface tension of detergent solutions with concentration.

## UNIT-III

Viscosity measurement using Ostwald's viscometer.
a) Determination of viscosity of aqueous solutions of (i) polymer (ii) ethanol and (iii) sugar at room temperature.
b) Study the variation of viscosity of sucrose solution with the concentration of solute.

## UNIT-IV

pH metry
a) Study the effect on pH of addition of HCl/NaOH to solutions of acetic acid, sodium acetate and their mixtures.
b) Preparation of buffer solutions of different pH;
(i) Sodium acetate-acetic acid
(ii) Ammonium chloride-ammonium hydroxide
c) pH metric titration of (i) strong acid vs. strong base, (ii) weak acid vs. strong base.
d) Determination of dissociation constant of a weak acid.

**Recommended Books:**

1. J.B. Yadav, Practical Physical Chemistry, Krishna
2. Findlay, Practical Physical Chemistry, Longman, New York

**Course Title: Business Research Methods**
**Course Code: BBA-401-18**

**Course Objective:** The course aims at equipping students with an understanding of the research process, tools and techniques in order to facilitate managerial decision making.

**Course Outcomes (COs):** After completion of the course, the students shall be able to:
**CO1:** Explain the objectives and process of conducting research and its application in business.
**CO2:** Analyse the different types of research design and experimental errors.
**CO3:** Understand various techniques of sampling and methods of data collection.
**CO4:** Examine different types of scales and appraise about data preparation and analysis.
**CO5:** Identify and prepare various types of reports.

## UNIT I
**Research Methodology:** definition, objectives, scope in management research, process of Research and limitations. Research Design: Formulating the Research Problem, Choice of Research Design, Types of Research Design, Sources of Experimental Errors

## UNIT II
**Sampling:** Advantages and Limitation of Sampling, Sampling process, Types of Sampling: Non-probability sampling techniques, Probability sampling techniques, Sampling and non-sampling errors. Data collection: primary, secondary data collection, observation methods and survey methods.

## UNIT III
Measurement Concept, Levels of measurement—Nominal, Ordinal, Interval and Ratio Attitude Measurement: Comparative scaling techniques, Non-comparative scaling techniques, Questionnaire Designing: Types, Guidelines for developing a good questionnaire

## UNIT IV
**Data Preparation And Analysis:** Editing, Coding, Cross Tabulation and Practices through Excel (Basic Concepts) Report Writing: Types of Research Reports, Guidelines for Writing a Report, Report Format, Guidelines for evaluating a report.

**Suggested Readings:**

1. K.V. Rao : Research Methodology, Sterling Publishers
2. Srivastava and Rego : Business Research Methodology Tata McGraw Hill
3. Rajinder Nargundhkar : Marketing Research, Tata McGraw Hill
4. Cooper and Schindler, Business Research Methods, Tata McGraw Hill
5. C.R. Kothari : Research Methodology, New Age International Publishers
