IKG Punjab Technical University

Syllabus (3rd-8th Semester)

for

Undergraduate Degree Programme

Bachelor of Technology ELECTRONICS AND TELECOMMUNICATION ENGINEERING

(ETE)

Scheme & Syllabus

2023 & onwards

Structure of Distribution of credits Electronics & Communication Engineering Program as per AICTE Model Curriculum 2018:

| Sr. No. | Category | Suggested Breakup of Credits (Total 160) |
|---------|---|--|
| 1 | Humanities and Social Science including Management courses | 12* |
| 2 | Basic Sciences courses | 25* |
| 3 | Engineering Science courses-including workshop, drawing, basics of electrical/mechanical/computer etc. | 24* |
| 4 | Professional Core courses | 48* |
| 5 | Professional Elective courses relevant to chosen specialization/branch | 18* |
| 6 | Open subjects - Electives from other technical and/or emerging subjects | 18* |
| 7 | Project Work, Seminar and Internship in Industry or elsewhere | 15* |
| 8 | Mandatory Courses [Environmental Sciences, Induction Program, Indian Constitution, Essence of Indian Traditional Knowledge] | (non-credit) |
| | Total | 160* |

^{*}Minor Variation is allowed as per need of the respective disciplines.

VISION

To impart quality education and create skilled technocrats & innovative entrepreneurs that meet to global challenges in the area of Electronics and Communication Engineering (ECE) at under graduate level.

MISSION

- 1. To impart outcome-based curriculum inculcating comprehensive fundamental domain knowledge meant to meet current industrial expectations.
- 2. To provide state-of-the-art infrastructure supported with best teaching-learning environment for practical realization of theoretical concepts.
- 3. To produce technocrats, researchers and entrepreneurs with inherent human values who can tackle challenges of professional career.

PROGRAMME EDUCATIONAL OBJECTIVES

- 1. Ability to generalize fundamental domain knowledge while working with electronic equipment/systems to handle engineering problems in professional career.
- 2. Ability to get profound knowledge of modern techniques, EDA tools and to acquire technical skills to innovate new/existing solutions to engineering problems.
- 3. Graduates will be known leaders in Electronics and Comm. Engineering and associated domains of engineering due their ability solve real-world inter-disciplinary problem.

PROGRAMME OUTCOMES (POS)

- 1. **Engineering Knowledge**: Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem Analysis**: Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- 3. **Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4. **Conduct** investigations of complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
- 5. **Modern Tool Usage**: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. **The Engineer and Society**: Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.

- B.Tech Electronics & Telecommunication Engineering (ETE) Study Scheme and Syllabus 2018 & Onwards Board of Studies Electronics & Communication Engineering, Affiliated colleges, IKGPTU Kapurthala
- 7. **Environment and Sustainability**: Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
- 9. **Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.
- 10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
- 11. **Project Management and Finance**: Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. **Life-long Learning**: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOS)

- 1. **Working with Instruments**: Appreciate working of electronic equipment/systems guided by practical experience and theoretical fundamental knowledge of Electronics & Communication Engineering.
- 2. **Extrapolating Domain Knowledge**: Ability to provide solutions to real-world problems in the field of Electronics & Communication Engineering by extrapolating the fundamental knowledge of electronic devices, circuits, embedded & communication systems.
- 3. **Innovation and Design Ability**: Innovative thinking and ability to design and/or improve products and/or systems for the society and industry for better utilization, human safety and reduced cost.

| | | Development | | | | | | | | credit |
| | | Total | 15 | 1 | 2 | 18 | 200 | 300 | 500 | 16 |

- 1. Four Professional Elective subjects (each of 3 credits) from any one of the Five Professional Elective Groups (excluding the group which the student has opted earlier).
- 2. The student will undertake and complete a Minor Project using Simulation and Modelling Lab & submit the Report.
- 3. Student has to complete 16 credits equivalent to that of One semester Industrial training in this course.
- * Student may choose any one of these as foundational course in HUSS group as given in AICTE Model Curriculum 2018.

Range of credits for Honors Degree -Minimum credits as per scheme are required by a student to be eligible to get Under Graduate degree in Electronics and Communication Engineering.

- 1. A student will be eligible to get Under Graduate degree with Honours, if he/she completes an additional 20 credits. These could be acquired through MOOCs and registering in the department.
- 2.Range of Credits and Courses for Major Degree in B. Tech. (Electronics and Communication Engineering) and Minor Degree in B.Tech. (Other Engineering)

18/05/2021

- B.Tech Electronics & Telecommunication Engineering (ETE) Study Scheme and Syllabus 2018 & Onwards Board of Studies Electronics & Communication Engineering, Affiliated colleges, IKGPTU Kapurthala
- (i) A student admitted in B. Tech (ECE) may opt for Major Degree in B. Tech. (ECE) and Minor Degree in B.Tech. (other Engineering) with effect from 3rd semester onwards.
- (ii) The student must clear his/her previous two semesters.
- (iii) The student/candidate will require to clear at least five theory subjects for Minor Degree in B.Tech.

IK Gujral Punjab Technical University Kapurthala

Subjects for Minor Degree in B.tech Electronics and Communication Engineering (ECE)

Core Subjects:

| S.No. | Subject Code | Course Title | Credits |
|-------|--------------|--------------------------------------|---------|
| 1. | BTEC-305-18 | Basic Electronics | 3 |
| 2. | BTEC-306-18 | Digital Electronics | 3 |
| 3. | BTEC-401-18 | Analog Circuits | 4 |
| 4. | BTEC-402-18 | Microprocessors and Microcontrollers | 3 |
| 5. | BTEC-403-18 | Signals and Systems | 4 |
| 6. | BTEC-501-18 | Analog and Digital Communication | 3 |
| 7. | BTEC-503-18 | Linear Integrated Circuits | 3 |
| 8. | BTEC-504-18 | Control Systems | 4 |
| 9. | BTEC-601-18 | Wireless Communication | 3 |
| 10. | BTEC-602-18 | Digital Signal processing | 4 |
| 11. | BTEC-603-18 | Optical Fibres and Communication | 3 |
| 12. | BTEC-604-18 | Microwave and Antenna Engg. | 4 |

Elective Subjects

| S.No. | Subject Code | Course Title | Credits |
|-------|--------------|-------------------------------|---------|
| 1. | BTEC- 301-18 | Electronic Devices | 3 |
| 2. | BTCS-301-18 | Data Structures & Algorithms | 3 |
| 3. | BTEC-905A-18 | Routing and Switching | 3 |
| 4. | BTEC-905D-18 | Artificial Intelligence | 3 |
| 5. | BTEC-905E-18 | Introduction to Big Data | 3 |
| 6. | BTEC-905F-18 | IOT and Applications | 3 |
| 7. | BTEC-906B-18 | Information Theory and Coding | 3 |
| 8. | BTEC-906C-18 | Antenna Radiating Systems | 3 |
| 9. | BTEC-906D-18 | Mobile Communication and | 3 |
| | | Networks | |
| 10. | BTEC-906E-18 | Satellite Communication | 3 |

| 11. | BTEC-907A-18 | VLSI/ULSI Technology | 3 |

THIRD SEMESTER

B.Tech.

Electronics & Telecommunication Engineering

Syllabus

IKGujral Punjab Technical University

Jalandhar-Kapurthala Highway, Kapurthala-144603 (PB)

| BTEC-301-18 | Credits | L | T | P | Int | Ext |
|---------------------------|---------|---|---|---|-----|-----|
| Electronic Devices | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to recall concepts of semiconductor physics and understand the behaviour and working of semiconductor devices using mathematical models.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand physics of semiconductors and behavior of charge carriers within semiconductors
- 2. Understand the working of semiconductor diodes supported with mathematical explanation.
- 3. Understand the working of BJT and MOSFET with their equivalent small signal models.
- 4. Understand the chemical processes used in fabrication of integrated circuits.

Unit 1: Semiconductor Physics

Review of quantum mechanics; electrons in periodic lattices; e-k diagrams; energy bands in intrinsic and extrinsic silicon; diffusion current; drift current; mobility and resistivity; sheet resistance; design of resistors.

Unit 2: Diodes

Generation and recombination of carriers; Poisson and continuity equation p-n junction characteristics; V-I characteristics; small signal switching models; avalanche breakdown; Zener diode; Schottky diode; light emitting diode; tunnel diode; varactor diode, solar cell, Rectifier & Regulator circuits.

Unit 3: Transistors

Bipolar junction transistor; V-I characteristics; Ebers-Moll model; Transistor Configurations - CE, CB, CC; MOS capacitor; MOSFET - Construction and Working; I-V characteristics; Depletion-type and Enhancement-type MOS.

Unit 4: Fabrication Processes

Oxidation; diffusion; ion-implantation; Annealing; photolithography; etching; chemical vapour deposition (CVD); sputtering; twin-tub CMOS process.

- 1. G. Streetman, and S. K. Banerjee, *Solid State Electronic Devices*, Pearson.
- 2. D. Neamen, D. Biswas, Semiconductor Physics and Devices, McGraw-Hill Education
- 3. S. M. Sze and K. N. Kwok, *Physics of Semiconductor Devices*, John Wiley & Sons
- 4. C. T. Sah, Fundamentals of solid state electronics, World Scientific Publishing Co. Inc.

| BTEC-302-18 | Credits | L | Т | P | Int | Ext |
|-----------------------|---------|---|---|---|-----|-----|
| Digital System Design | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is course deals with fundamental concepts of digital electronics necessary many other courses, like embedded systems, VLSI and computer architecture, etc. to be studied in coming semesters.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. Apply concepts of Boolean algebra for handling logical expressions.
- 2. Understand working and realization of combinational circuits.
- 3. Understand working flip-flops and use them in designing of sequential circuits.
- 4. Understand fundamental concepts of logic families and architectural of programmable devices.
- 5. Use HDL programming tool for simulation of combinational & sequential circuits.

Unit 1: Boolean Algebra & Combinational Circuits

Logic gates; Boolean algebra; De Morgan's theorem, SOP & POS forms, canonical forms, Karnaugh maps up to 6 variables, binary codes, code Conversion, MSI devices like comparators; multiplexers; encoder; decoder; driver & multiplexed display; half and full adders; subtractors; serial and parallel adders; BCD adder; barrel shifter and ALU.

Unit 2: Sequential Circuits

Building blocks of sequential circuits like S-R, J-K,T & D flip-flops; master-slave J-K FF; edge triggered FF; ripple counters; synchronous counters; shift registers; finite state machines; design of synchronous FSM, algorithmic state machines charts; designing synchronous circuits like pulse train generator; pseudo random binary sequence generator; clock generation.

Unit 3: Programmable Devices & ADC and DAC

Specifications: noise margin, propagation delay, fan-in, fan-out, Tristate; TTL, ECL, CMOS families and their interfacing; architectures of PLA, PAL, GAL, CPLD&FPGA. DAC: weighted resistor, R-2R ladder, resistor string; ADC: single slope, dual slope, successive approximation, flash.

Unit 4: Introduction to VHDL

VHDL constructs; Data types and objects; different modelling styles in VHDL; Dataflow, Behavioural and Structural Modelling; Synthesis and Simulation; HDL programming for basic combinational and sequential circuits.

- 1. R.P. Jain, Modern digital Electronics, Tata McGraw Hill
- 2. Douglas Perry, VHDL, Tata McGraw Hill
- 3. W.H. Gothmann, Digital Electronics-An introduction to theory and practice, PHI
- 4. D.V. Hall, Digital Circuits and Systems, Tata McGraw Hill
- 5. Charles Roth, Digital System Design using VHDL, Tata McGraw Hill

| BTEC-303-18 | Credits | L | T | P | Int | Ext |
|------------------------------|---------|---|---|---|-----|-----|
| Electromagnetic Waves | 3 | 3 | 1 | 0 | 40 | 60 |

Course Objective

This course deals with knowledge and background required for better understanding of Electromagnetic Waves and fundamentals.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. Understand characteristics & wave propagation through transmission lines
- 2. Understand Maxwell's equations for electromagnetic waves
- 3. Characterize uniform plane wave
- 4. Calculate reflection and transmission of waves at media interface

Unit 1: Transmission Lines

Equations of voltage and current on transmission line; propagation constant and characteristic impedance, and reflection coefficient and VSWR; Loss-less and Low-loss transmission line; Power transfer on transmission line; S-parameters, Smith chart; applications of transmission lines; impedance matching; use of transmission line sections as circuit elements.

Unit 2: Maxwell's Equations

Basics of vectors; Vector calculus; Basic laws of Electromagnetic; Maxwell's equations; Boundary conditions at media Interface.

Unit 3: Uniform Plane Wave

Uniform plane wave; propagation of wave; wave polarization; Poincare's sphere; wave propagation in conducting medium; phase and group velocity; power flow and Poynting vector; surface current and power loss in a conductor.

Unit 4: Plane Waves at a Media Interface

Plane wave in arbitrary direction; reflection and refraction at dielectric interface; total internal reflection; wave polarization at media interface; reflection from a conducting boundary.

Unit 5: Wave propagation in parallel plane waveguide

Analysis of waveguide general approach; rectangular waveguide, modal propagation in rectangular waveguide; surface currents on the waveguide walls, field visualization, attenuation in waveguide.

| BTEC-304-18 | Credits | L | Т | P | Int | Ext |
|----------------|---------|---|---|---|-----|-----|
| Network Theory | 3 | 3 | 1 | 0 | 40 | 60 |

Course Objective

This course is meant to create mathematical foundation which can further be extrapolated to understand and analyze the electrical networks.

Course Outcomes

At the end of this course student will be able to:

- 1. Analyze linear networks using network theorems.
- 2. Use Laplace transform to analyze transient & steady state response of linear networks.
- 3. Comprehend network parameters to analyze two port networks.
- 4. Realize one port networks using Foster's and Cauer's methods.

Unit 1: Network Theorems

Node and mesh analysis; impedance matrix approach for networks analysis; Network theorems: superposition, reciprocity, Thevenin's, Norton's, Maximum power Transfer, compensation and Tallegen's theorem as applied to AC circuits; Trigonometric and Exponential Fourier series, Fourier Transform and continuous spectra Three phase unbalanced circuit and power calculation.

Unit 2: Transient & Steady State Analysis

Transient behavior, concept of complex frequency, Driving points, Poles and Zeros, Laplace transforms and properties: singularity functions, waveform synthesis; time domain analysis of RC, RL & RLC networks with and without initial conditions; Laplace Transforms for steady state and transient response of networks, quality factor.

Unit 3: Two Port Networks

Impedance parameters; admittance parameters; transmission parameters; hybrid parameters; inter-relationships between two port network parameters; interconnection of two port networks; T and Pi representation of two port networks; image impedance; characteristic impedance; propagation constant; filters: low pass, high pass; band pass, band stop & Butterworth filter.

Unit 4: Network Synthesis

Realizability criteria: Hurwitz polynomial, positive real functions; network realization using Foster's first and second forms; network synthesis using Cauer's first and second forms.

Detailed Content:

Unit-I

Laplace Transform

Laplace Transform, Properties of Laplace Transform, Laplace Transform of Unit step function, Impulse function, Dirac-delta function, Periodic functions. Inverse Laplace Transform, convolution theorem, Evaluation of integrals by Laplace Transform, Applications to solve initial value problems of ordinary differential equations.

Unit II

Fourier Series and Transform

Fourier Series, half range Fourier Sine and Cosine series, Fourier integrals, Gibbs Phenomenon, Fourier transforms, Relation between Laplace and Fourier transform, Properties of Fourier Transforms, Convolution Theorem and applications.

Unit III

Z-Transform

Basic theory of Z transforms, Translation theorem, Scaling property of Z transforms, Initial and Final value theorems, Differentiation of Z transforms Solution of Difference equations using Z transform, Applications of Z transforms to find the sum of series.

Unit IV

Probability and Statistics

Measures of central tendency: Mean, median and mode. Definition of Probability, Discrete and continuous random variables, Probability distributions: Binomial, Poisson and Normal. Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves.

| Electronic Devices Lab | 1 | 0 | 0 | 2 | 30 | 20 |

Course Objective

This is basic course meant to give hands on experience of semiconductor devices and making them to use in circuits & projects.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. Realize use of diodes in circuits with proper understanding to their working.
- 2. Understand characteristics & working of BJT in different configurations.
- 3. Understand characteristics & working of MOSFET in circuits.
- 4. Think and design working circuits based on diodes, BJTs and MOSFETs.

Part-A: Experiments

18/05/2021

List of Experiments

- 1. Study of datasheets of semiconductor devices.
- 2. V-I characteristics of PN junction Zener diode.
- 3. Zener diode as voltage regulator.
- 4. Half-wave rectifier.
- 5. Full-wave center-tapped and bridge rectifier.
- 6. Input & output V-I characteristic curve of npn/pnp BJT in CE configuration
- 7. Input & output V-I characteristic curve of npn/pnp BJT in CB configuration
- 8. Input & output V-I characteristic curve of npn/pnp BJT in CC configuration
- 9. BJTs (npn & pnp) as switches to drive a relay
- 10. V-I Characteristics curves of MOSFET

Part-B: Lab Projects

Every individual student is required design and build one Lab Project under the supervision of course teacher. Topic of the project may be any from the theory contents and not limited to following list:

- 1. Blinking linear/circular lights
- 2. Ambient light sensor based controller
- 3. Regulated dual power supply of ±5V or ±12V or mixed
- 4. BJT audio amplifier
- 5. BJT circuit for sampling of analog signal
- 6. Simulate any project idea using SPICE software

|---------------------------|---------|---|---|---|-----|-----|
| Digital System Design Lab | 1 | 0 | 0 | 2 | 30 | 20 |

Course Objective

This is laboratory course meant to realize basic digital circuits using physical components and EDA tools in simulation environment.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. Realize combinational circuits using logic gates.
- 2. Realize sequential circuits using logic gates.
- 3. Write & simulate VHDL programs for combinational & sequential circuits.
- 4. Think and design working projects using digital 74XX ICs.

Part-A: Experiments (Any 10 Experiments)

- 1. To verify the Truth-tables of all logic gates.
- 2. To realize and verify the Half & full adder circuits using logic gates.
- 3. To realize Half & full subtractor circuits using logic gates.
- 4. To realize 4-bit binary-gray & gray-binary converters.
- 5. To realize comparator circuit for two binary numbers of 2-bit each.

- 6. To realize Full adder & full subtractor circuits using 8x3 encoder.
- 7. To design Full adder & full subtractor circuits using 8x3 demultiplexer.
- 8. To design and verify the Truth tables of all flip-flops.
- 9. To design Mod-6/Mod-9 synchronous up-down counter.
- 10. To write VHDL program for combinational & sequential circuits from S. No. 2 to 7
- 11. To write VHDL program for universal shift-register operations

Part-B: Lab Projects

Every individual student is required design one Lab Project under the supervision of course teacher. Topic of the project may be any from the theory contents and not limited to following list:

- 1. Pulse Width Modulator based LED dimmer using 555 timer IC.
- 2. Up-down 4-bit counter with seven-segment display.
- 3. Construction of combinational circuits using universal gates.
- 4. Bi-directional visitors counter
- 5. Traffic light control system
- 6. Any project based on Arduino platform

^{*} As stated in the IKGPTU B.Tech 1st Year Scheme and Syllabus

^{**}S/US - Satisfactory and Unsatisfactory

^{*} Guidelines regarding Mentoring and Professional Development

The objective of mentoring will be development of:

- Overall Personality
- Aptitude (Technical and General)
- General Awareness (Current Affairs and GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. outdoor activities and class activities.

For achieving the above, suggestive list of activities to be conducted are:

Part - A

(Class Activities)

- 1. Expert and video lectures
- 2. Aptitude Test
- 3. Group Discussion
- 4. Quiz (General/Technical)
- 5. Presentations by the students
- 6. Team building Exercises

Part - B

(Outdoor Activities)

- 1. Sports/NSS/NCC
- 2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc.

Evaluation shall be based on rubrics for Part – A & B

Mentors/Faculty incharges shall maintain proper record of students for each activity conducted and the same shall be submitted to the department.

FOURTH SEMESTER

B.Tech.

Electronics & Telecommunication Engineering

Syllabus

IKGujral Punjab Technical University

| BTEC-401-18 | Credits | L | Т | P | Int | Ext |
|------------------------|---------|---|---|---|-----|-----|
| Analog Circuits | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This course deals design & analytical concepts of various Analog circuits like BJT/FET circuits, feedback amplifiers, oscillators, power amplifiers and DAC & ADC converters.

Course Outcomes

At the end of this course student will be able to:

- 1. Understand the biasing of transistors and analyze BJT/FET amplifiers
- 2. Analyze various rectifier and amplifier circuits
- 3. Analyze sinusoidal and non-sinusoidal oscillators
- 4. Understand the functioning of OP-AMP and design OP-AMP based circuits
- 5. Explain the design of ADC and DAC.

Unit 1: Diode and Transistor Amplifier Circuits

Diode Circuits, Amplifiers types: Voltage amplifier, current amplifier, trans-conductance amplifier and trans-resistance amplifier; biasing schemes for BJT and FET amplifiers; bias stability; transistor configurations: CE/CS, CB/CG, CC/CD and their features; small-signal analysis; low-frequency transistor models; amplifier analysis: current gain, voltage gain, input resistance and output resistance; amplifier design procedure; low frequency analysis of multistage amplifiers. High frequency transistor models.

Unit 2: Feedback Amplifiers

Feedback topologies: Voltage series, current series, voltage shunt and current shunt feedback; effect of feedback on gain, bandwidth, input & output impedances; concept of stability, gain margin and phase margin.

Unit 3: Oscillators Introduction, Types of Oscillators, Barkhausen criterion, RC-phase shift, Wien bridge, Hartley, Colpitt, Clapp oscillators and non-sinusoidal oscillators.

Unit 4: Power Amplifiers

Class A, B, AB and C power amplifiers, their efficiency and distortions; frequency response: single stage, multistage amplifiers and cascade amplifier

|--------------------------------------|---------|---|---|---|-----|-----|
| Microprocessors and Microcontrollers | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is course deals with fundamental concepts of digital electronics necessary many other courses, like embedded systems, VLSI and computer architecture, etc. to be studied in coming semesters.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. Understand architecture &functionalities of different building block of 8085 microprocessor.
- 2. Understand working of different building blocks of 8051 microcontroller.
- 3. Comprehend and apply programming aspects of 8051 microcontroller.
- 4. Interface & interact with different peripherals and devices.

Unit 1: Microprocessor 8085

History of microprocessors; microprocessor 8085 Architecture, Pin configuration; Memory Interfacing; microprocessor programming model; 8085 instructions; Addressing modes; programming techniques, counters and time delays; stack and subroutines; interrupts.

Unit 2: Microcontroller 8051 - Building Blocks

Microprocessor vs microcontroller; RISC vs CISC architectures; microcontroller 8051: architecture, pin configuration, flag-bits and PSW register, input-output ports, register banks and stack; semiconductor memories: ROM, SRAM, DRAM, virtual memory, cache memory; memory organization.

Unit 3: Microcontroller 8051 - Programming

Assembly language programming; data types and directives; jump loop and call instructions; I/O port programming; addressing modes and accessing memory using various addressing modes; arithmetic instructions and programs; logic instructions and programs; single bit instructions and programming, 8051 interrupts; timer/counter programming in the 8051.

Unit 4: Microcontroller 8051 - Interfacing

Parallel and serial ADC& DAC interfacing; LCD interfacing, Keyboard interfacing; sensor interfacing; interfacing with external memory; matrix keypad; stepper motor interfacing; DC motor interfacing and PWM.

|--------------------------------|---------|---|---|---|-----|-----|
| Data Structures and Algorithms | 3 | 3 | 0 | 0 | 40 | 60 |

Finalized by the concerned Board of Studies of Department of Computer Science and Engineering.

Course Objectives: The objective of the course is to impart the basic concepts of data structures and algorithms, to understand concepts about searching and sorting technique and to understand basic concepts about stacks, queues, lists, trees and graphs, data structures.

Course outcomes

Student will be able to:

- 1. Understand operations like searching, insertion, deletion, traversing on linear Data Structures and to determine their computational complexities
- 2. Understand operations like searching, insertion, deletion, traversing on various non linear Data Structures and to determine their computational complexities
- 3. Write algorithms for Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort and compare their performance in term of Space and Time complexity.
- 4. Apply appropriate Data Structure as per specific problem definition

Detailed contents: Module 1:

Introduction: Basic Terminologies: Elementary Data Organizations, Data Structure Operations: insertion, deletion, traversal etc.; Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off. **Searching:** Linear Search and Binary Search Techniques and their complexity analysis.

Introduction to pointers and dynamic memory allocation, use of pointers in self referential data structures.

Module 2:

Stacks and Queues: ADT Stack and its operations: Algorithms and their complexity analysis, Applications of Stacks: Expression Conversion and evaluation – corresponding algorithms and complexity analysis. ADT queue, Types of Queue: Simple Queue, Circular Queue, Priority Queue; Operations on each types of Queues: Algorithms and their analysis.

Module 3:

Linked Lists: Singly linked lists: Representation in memory, Algorithms of several operations: Traversing, Searching, Insertion into, Deletion from linked list; Linked representation of Stack and Queue, Header nodes, Doubly linked list: operations on it and algorithmic analysis; Circular Linked Lists: all operations their algorithms and the complexity analysis.

Trees: Basic Tree Terminologies, Different types of Trees: Binary Tree, Threaded Binary Tree, Binary Search Tree, AVL Tree; Tree operations on each of the trees and their algorithms with complexity analysis, Applications of Binary Trees.

Module 4:

Sorting and Hashing: Objective and properties of different sorting algorithms: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort; Performance and Comparison among all the methods, Hashing.

Graph: Basic Terminologies and Representations, Graph search and traversal algorithms and complexity analysis.

- 2. "How to Solve it by Computer", 2nd Impression by R. G. Dromey, Pearson Education.
- 3. Algorithms by Tannenbaum

| BTEC-403-18 | Credits | L | Т | P | Int | Ext |
|-------------------|---------|---|---|---|-----|-----|
| Signals & Systems | 4 | 3 | 1 | 0 | 40 | 60 |

Course Objective: The objective of this course is to enable students to apply mathematical concepts and tool in analysis of electrical signals and systems.

Course outcomes:

At the end of this course students will demonstrate the ability to:

- 1. Mathematically characterize different types of signals and systems.
- 2. Analyze the behavior of linear-shift invariant systems.

- 3. Apply concepts of Fourier and Laplace Transforms to analyze continuous-time signals and systems.
- 4. Investigate discrete-time signals and systems using Discrete-Time Fourier and Z-Transforms and simple Probability concepts.

Unit 1: Introduction to Signals and Systems

Classification of Signals: Periodic and Aperiodic signals, continuous and discrete time signals, continuous and discrete amplitude signals; Linear and nonlinear signals, Causal and non-causal signals, Even and odd signals, Energy and power signals; System properties: linearity, shift-invariance, causality, stability, Realizability.

Unit 2: Linear-Shift Invariant Systems

Linear shift-invariant systems; Impulse response and step response; Convolution, Input-output behaviour with Aperiodic convergent inputs; Characterization of causality and stability of LSI systems; System representation through differential equations and difference equations; Periodic inputs to an LSI system; Notion of frequency response and its relation to the impulse response.

Unit 3: Continuous-Time Analysis of Signals and Systems

Fourier Series; Fourier Transform; Magnitude and phase response; Properties of Fourier Transform: Convolution/Multiplication, Duality, Time-shifting, Frequency-shifting, Time-scaling, Integration and differentiation in time-domain; Review of Laplace Transform for continuous-time signals and systems; Notion of Eigen functions of LSI systems; System transfer function and poles-zeros analysis; Solution to differential equations and system behaviour.

Unit 4: Discrete-Time Analysis of Signals and Systems

Sampling Theorem and its proof; Spectra of sampled signals; Aliasing and its effects; Reconstruction and its implications; Probability: Mean, median, mode and standard deviation; combinatorial probability, probability distribution functions. Discrete-Time Fourier Transform (DTFT); Discrete Fourier Transform; Parseval's Theorem; Review of Z-Transform for discrete-time signals and systems; System functions; Region of convergence and z-domain analysis, Conditional Probability.

| Mandatory Course: | Non- | 2 | 0 | 0 | 60 | 40 |
|-------------------------------|--------|---|---|---|----|----|
| Environmental Sciences | credit | | U | U | 60 | 40 |

Finalized by the Board of Studies of Department of Civil Engineering. Course Outcomes:

- 1. Students will enable to understand environmental problems at local and national level through literature and general awareness.
- 2. The students will gain practical knowledge by visiting wildlife areas, environmental institutes and various personalities who have done practical work on various environmental Issues.
- 3. The students will apply interdisciplinary approach to understand key environmental issues and critically analyze them to explore the possibilities to mitigate these problems.
- 4. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world

1. Environment Science (Mandatory non-credit course)

We as human being are not an entity separate from the environment around us rather we are a constituent seamlessly integrated and co-exist with the environment around us. We are not an entity so separate from the environment that we can think of mastering and controlling it rather we must understand that each and every action of ours reflects on the environment and vice versa. Ancient wisdom drawn from Vedas about environment and its sustenance reflects these ethos. There is a direct application of this wisdom even in modern times. Idea of an activity based course on environment protection is to sensitize the students.

Detailed Contents

Module 1: Natural Resources: Renewable and non-renewable resources

Natural resources and associated problems.

- a) Forest resources: Use and over-exploitation, deforestation, case studies.

 Timber extraction, mining, dams and their effects on forest and tribal people.
- b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
- c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
- d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

- e) Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.
- f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.
- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Module 2 : Ecosystems

Concept of an ecosystem. Structure and function of an ecosystem. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of following ecosystems:

- a. Forest ecosystem
- b. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Module 3: Biodiversity and its conservation

- Introduction Definition : genetic, species and ecosystem diversity.
- Biodiversity at global, National and local levels.
- Inida as a mega-diversity nation
- Hot-sports of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India

Module 4: Social Issues and the Environment

- From Unsustainable to Sustainable development
- Resettlement and rahabilitation of people; its problems and concerns.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion,
 - Nuclear accidents and holocaust. Case Studies.
- Public awareness.

*ACTIVITIES

Nature club (bird watching, recognizing plants at institute/at home, recognizing local animals, appreciating biodiversity

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.

Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.

Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

1(A) Awareness Activities:

- a) Small group meetings about water management, promotion of recycle use, generation of less waste, avoiding electricity waste
- b) Slogan making event
- c) Poster making event
- d) Cycle rally
- e) Lectures from experts
- *f*) Plantation
- g) Gifting a tree to see its full growth
- h) Slevelinesse grigation of waste
- i) To live with some eminent environmentalist for a week or so to understand his work vi) To work in kitchen garden for mess
- j) To know about the different varieties of plants
- k) Shutting down the fans and ACs of the campus for an hour or so
- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain/lake/Estuary/Wetlands
- m) Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- n) Visit to a Wildlife sanctuary, National Park or Biosphere Reserve

| Analog Circuits Lab | 1 | 0 | 0 | 2 | 30 | 20 |

Course Objective

This laboratory course deals design & analytical concepts of various analog circuits like BJT/FET circuits, feedback amplifiers, oscillators, power amplifiers and DAC & ADC converters.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. study and verify the characteristics of diodes/BJTs in circuits with proper understanding to their working.
- 2. Understand frequency response & working of various types of Oscillators.
- 3. Understand characteristics & working of Power amplifiers.
- 4. Think and design working circuits based on diodes, BJTs and MOSFETs.

Part-A: Experiments

List of Experiments:

- 1.To study the Input/Output V-I characteristics of BJT in CE configuration.
- 2.To study Emitter follower circuit.
- 3. To calculate the frequency of RC phase shift oscillator.
- 4.To study the frequency response of Wein bridge oscillator.
- 5. To study the frequency response of Hartley oscillator.
- 6. To study the frequency response of Colpitt's oscillator.

18/05/2021

- 7. To study Gain analysis of Class-A Power Amplifier
- 8. To study Gain analysis of Class-B Power Amplifier
- 9. To study Gain analysis of Class B Push-pull Power Amplifier
- 10. To study Gain analysis of Class-C Power Amplifier

Part-B: Lab Projects

Every individual student is required design one Lab Project under the supervision of course teacher. Topic of the project may be any from the theory contents and not limited to following list:

- 1. BJT audio amplifier
- 2. Op-Amp based square and triangular waveform generator
- 3. Any project based on IoT/Arduino platform

| Microprocessors and Microcontrollers | 1 | 0 | 0 | 2 | 30 | 20 |
| Lab | 1 | U | U | 2 | 30 | 20 |

Course Objective

This is laboratory course meant to write programs using 8085/8086 microprocessor and learn interfacing using 8051 microcontoller for general operations.

Course Outcomes

At the end of this Lab course student will be able to:

- 1. Write programs for common arithmetic operations with 8-bit/16-bit numbers using 8085.
- 2. Write programs for transfer, sort block of data with 8085/8086 processor(s).
- 3. Write programs for controlling stepper and DC motors using Microprocessor(s).
- 4. Write programs to generate waveforms and interface ADC and DAC using of 8051 Microcontroller.

Part-A: Write programs in Assembly language & embedded C to

- 1. Add two 8-bit numbers stored in registers or internal/External memory locations.
- 2. Multiply two 8-bit numbers.
- 3. Multiply two 16-bit numbers.
- 4. Transfer block of data from internal memory locations to external memory locations
- 5. Sort block of data in ascending or descending order.
- 6. Generate 5KHz pulse waveform of 50% duty cycle.
- 7. Interface ADC and DAC.
- 8. Interface Matrix Keyboard.
- 9. Interface LCD Displays.
- 10. Interface Stepper Motor.
- 11. Control DC motor using PWM.

Part-B: Lab Projects

Every individual student is required design one Lab Project under the supervision of course teacher. Topic of the project may be any from the theory contents and not limited to following list:

- 1. RFID attendance system
- 2. Home automation
- 3. Robotic vehicle
- 4. Sensor traffic lights
- 5. Floor cleaning robot
- 6. Robot for defense applications
- 7. GPS vehicle tracking
- 8. Accident identification and SMS

^{*} As stated in the IKGPTU B.Tech 1st Year Scheme and Syllabus

* Guidelines regarding Mentoring and Professional Development

The objective of mentoring will be development of:

- Overall Personality
- Aptitude (Technical and General)
- General Awareness (Current Affairs and GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. outdoor activities and class activities.

For achieving the above, suggestive list of activities to be conducted are:

Part – A (Class Activities)

- 1. Expert and video lectures
- 2. Aptitude Test
- 3. Group Discussion
- 4. Quiz (General/Technical)
- 5. Presentations by the students
- 6. Team building Exercises

Part – B (Outdoor Activities)

- 1. Sports/NSS/NCC
- 2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, 18/05/2021

^{**}S/US - Satisfactory and Unsatisfactory

etc.

Evaluation shall be based on rubrics for Part – A & B

Mentors/Faculty incharges shall maintain proper record student wise of each activity conducted

and the same shall be submitted to the department.

FIFTH SEMESTER

B.Tech.

Electronics & Telecommunication Engineering

Syllabus

IKGujral Punjab Technical University

Jalandhar-Kapurthala Highway, Kapurthala-144603 (PB)

| BTEC-501-18 | Credits | L | T | P | Int | Ext |
|---|---------|---|---|---|-----|-----|
| Analog and Digital Communication | 4 | 3 | 1 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to know the concepts of Analog as well as Digital Communication and understand the working of common communication techniques.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Analyze and compare different analog modulation schemes for their efficiency and bandwidth
- 2. Analyze the behavior of a communication system in presence of noise
- 3. Investigate pulsed modulation system and analyze their system performance
- 4. Analyze different digital modulation schemes and can compute the bit error performance

Unit 1: Analog Communication

Review of Signals and Systems, Frequency domain representation of signals, Amplitude Modulation: Transmission and Reception of DSB, SSB and VSB, Angle Modulation, Spectral characteristics of angle modulated signals, Principles of Frequency and Pulse Modulation, Representation of FM and PM signals, Review of white noise characteristics, Noise in amplitude modulation and Angle Modulation systems, Pre-emphasis and De emphasis.

Unit 2:Digital Communication

Analog to Digital: Need, Sampling process, Pulse Amplitude modulation and Concept of Time division multiplexing, Pulse code modulation (PCM), Differential pulse code modulation. Delta modulation and demodulation, Adaptive and Sigma Delta Modulation, Noise considerations in PCM, Digital Multiplexers.

Unit 3: Elements of Detection Theory

Optimum detection of signals in noise, Coherent communication with waveforms- Probability of Error evaluations. Review of probability and random process Gaussian noise characteristics, Baseband Pulse Transmission: Inter symbol Interference and Nyquist criterion.

Unit 4: Digital Modulation Techniques

Phase Shift Keying, Frequency Shift Keying, Quadrature Amplitude Modulation, Continuous Phase Modulation and Minimum Shift Keying.

| BTEC-502-18 | Credits | L | T | P | Int | Ext |
|----------------------------------|---------|---|---|---|-----|-----|
| Digital Signal Processing | 4 | 3 | 1 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to know the concepts of Digital Signal Processing and understand the commonly used digital filters and systems.

Course Outcomes

At the end of this course students will demonstrate the ability to

- 1. Represent signals mathematically in continuous and discrete time and frequency domain
- 2. Get the response of an LSI system to different signals
- 3. Design of different types of digital filters for various applications

Unit 1: Discrete Time Signals

Elementary Discrete time sequences and systems; Representation of signals on orthogonal basis; Sampling and reconstruction of signals; Discrete systems attributes, Basic elements of digital signal processing such as convolution, correlation and autocorrelation, Concepts of stability, causality, linearity, difference equations. Implementation of Discrete Time Systems, Linear Periodic and Circular convolution, Z-Transform, Inverse Z-Transform methods, Properties of Z-Transform.

Unit 2: LSI Systems

Analysis of LSI systems, Frequency Analysis, Inverse Systems, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT) with their properties, Inverse DFT and FFT methods, Goertzel Algorithm.

Unit 3: Digital filters Design

Structures of realization of discrete time system, direct form, Cascade form, parallel form and lattice structure of FIR and IIR systems. Time Invariant and Bilinear Transformation Methods,Rectangular,Hamming and Hanning Window methods, Park-McClellan's method. Design of IIR Digital Filters: Butterworth, Chebyshev and Elliptic Approximations; Low pass, Band pass, Band stop and High pass filters. Effect of finite register length in FIR filter design. Parametric and non-parametric spectral estimation. Matched Z-Transformation, Analog and Digital Transformation in the Frequency Domain. Finite Precision Effects: Fixed point and Floating point representations, Effect of round off noise in digital filters, Limit cycles.

Unit 4: Introduction to Multirate signal processing and DSP processors

Concepts of Multirate Signal Processing, need and significance, Applications of DSP, Limitations of Analog signal processing, Advantages of Digital signal processing, Architectures of ADSP and TMS (C6XXX) series of processor.

Recommended Books

- 1. S.K.Mitra, Digital Signal Processing: A computer based approach.TMH, 2001.
- 2. A.V. Oppenheim and Schafer, Discrete Time Signal Processing, Prentice Hall, 1989.
- 3. John G. Proakis and D.G. Manolakis, Digital Signal Processing: Principles, Algorithms And Applications, Prentice Hall, 1997.

- 5. J.R. Johnson, Introduction to Digital Signal Processing, Prentice Hall, 1992.
- 6. D.J.DeFatta, J. G. Lucas and W.S. Hodgkiss, Digital Signal Processing, John Wiley & Sons, 1988.

| BTEC-503-18 | Credits | L | T | P | Int | Ext |
|-----------------------------------|---------|---|---|---|-----|-----|
| Linear Integrated Circuits | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to know the concepts of Linear Integrated Circuits and their working along with their applications.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand Differential and Cascade Amplifiers
- 2. Know the basics, working and characteristics of Op-Amps
- 3. Investigate various applications of Op-amps
- 4. Understand some specialized Op-Amps
- 5. Interpretation of Data Sheets and their Applications thereof.

UNIT I: DIFFERENTIAL ANDCASCADE AMPLIFIERS

Introduction: Differential Amplifier, its Circuit Configuration, Dual Input-Balanced output Differential amplifier, Dual Input Unbalanced output, Single Input Balanced & Unbalanced Output Differential Amplifier, Amplifier with their DC and AC analysis, Differential Amplifier with Swaping resistors, Constant current bias, Current Mirror, Cascaded differential amplifier stages, Level Translator, CE-CB Configuration.

UNIT II: INTRODUCTION TO OPERATIONAL AMPLIFIERS

Block diagram of a typicalOp-Amp, Schematic symbol, integrated circuits and their types, IC package types, Pin Identification and temperature range, Interpretation of Data sheets, Overview of typical set of data sheets, Characteristics and performance parameters of and Op-Amp, Ideal Op-Amp, Equivalent circuit of an Op-Amp, Ideal voltage transfer curve, Open loop configurations: Differential, Inverting & Non Inverting. Practical Op-Amp: Input offset voltage, Input bias current, Input offset current, total output offset voltage, Thermal drift, Effect of variation in power supply voltages on offset voltage, Temperature and supply voltage sensitive parameters, Noise, Common Mode configuration and common mode rejection Ratio. Feedback configurations.

UNIT III: APLICATIONS OF OP-AMP

DC and AC amplifiers, Peaking Amp, Summing, Scaling and Averaging Amp, Instrumentation Amplifier, Log and Antilog Amp, Integrator, Differentiator. Active filters: First order LP Butterworth filter, Second-order HP Butterworth filter, First order HP Butterworth filter, Second-order HP Butterworth filter, Higher order filters, Band Pass filter, Band reject Filter, All Pass filter, Phase shift Oscillator, Wein Bridge Oscillator, Square wave Oscillator, Basic Comparator, Schmitt trigger, V to F and F to V converters.

UNIT IV: SPECIALIZED IC APPLICATIONS

IC 555 Timer: Pin configuration, Blockdiagram, application of IC 555 as Monostable and AstableMultivibrator., Phase Lock Loops: Operating principles & applications of IC 565 and IC 566,Monolithic PLL TL082, Voltage Regulators: Fixed voltage regulators (78XX and 79XX), Adjustable voltage regulators (LM327), Analog multiplier ICs (MPY634 KP) and their applications, Switching Regulators, Audio Power amplifier, Video Amplifier, Isolation Amplifier, Opto-couplers and fibre optic IC.

Recommended Books

- 1. 1. Op Amps & Linear Integrated circuits by Ramakant A. Gayakwad, Pearson
- 2. Operational Amplifiers & Linear Integrated circuits by Robert F. Coughlin, Prentice Hall
- 3. Design with Operational Amplifiers and Analog Integrated Circuits, Sergio Franco, TMH

| BTEC-504-18 | Credits | L | T | P | Int | Ext |
|-----------------|---------|---|---|---|-----|-----|
| Control Systems | 4 | 3 | 1 | 0 | 40 | 60 |

Course Objective

This is the course meant to gain the knowledge of important control systems, characterize them and study their state behaviour.

Course Outcomes

At the end of this course students will demonstrate the ability to

- 1. Characterize a system and find its study state behaviour
- 2. Investigate stability of a system using different tests
- 3. Design various controllers
- 4. Solve linear, non-linear and optimal control problems

Unit 1: Introduction

Classification with understanding of Industrial Control system examples. Transfer function. System with dead-time. System response. Control hardware and their models: potentiometers, synchros, LVDT, DC and AC servomotors, Tacho generators, Electro hydraulic valves, hydraulic servomotors, electro pneumatic valves, pneumatic actuators. Closed-loop systems. Block diagram and signal flow graph analysis.

Unit 2: Feedback Control systems

Stability, steady-state accuracy, transient accuracy, disturbance rejection, insensitivity and robustness. proportional, integral and derivative systems. Feed forward and multi-loop control configurations, stability concept, relative stability, Routh stability criterion.

Unit 3: Second Order systems

Time response of second-order systems, steady-state errors and error constants. Performance specifications in time-domain. Root locus method of design. Lead and lag compensation. Frequency-response analysis- Polar plots, Bode plot, stability in frequency domain, Nyquist plots. Nyquist stability criterion. Performance specifications in frequency-domain. Frequency domain methods of design, Compensation & their realization in time & frequency domain. Lead and Lag compensation. Op-amp based and digital implementation of compensators. Tuning of process controllers. State variable formulation and solution.

Unit 4: State variable Analysis

Concepts of state, state variable, state model, state models for linear continuous time functions, diagonalization of transfer function, solution of state equations, concept of controllability & observability. Introduction to Optimal control & Nonlinear control, Optimal Control problem, Regulator problem, Output regulator, tracking problem. Nonlinear system – Basic concept & analysis.

Recommended Books:

- 1. Gopal. M., "Control Systems: Principles and Design", Tata McGraw-Hill, 1997.
- 2. Kuo, B.C., "Automatic Control System", Prentice Hall, sixth edition, 1993.
- 3. Ogata, K., "Modern Control Engineering", Prentice Hall, second edition, 1991.
- 4. Nagrath& Gopal, "Modern Control Engineering", New Age International, New Delhi.

Professional Electives of ICT Group (Elective-1)

| BTEC-905A-18 | Credits | L | T | P | Int | Ext |
|------------------------------|---------|---|---|---|-----|-----|
| Routing and Switching | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes

- Demonstrate a basic understanding of small and medium-sized networks, including general network technologies.
- Ability to assist the design of small and medium-sized networks, and implement the designs.
- Ability to construct simple networks and integrate voice, wireless, cloud, security, and storage technologies into their networks in order to support a variety of applications.

Network Fundamentals

Basics of network architecture, enterprise network constructs, Ethernet framing, IP addressing, Internet Control Message Protocol, Address Resolution Protocol, Transport Layer Protocols,

Data Forwarding Scenario. Expanding the Enterprise Network, Navigating the CLI, File System Navigation and Management, VRP Operating System Image Management.

Network Connections

Establishing a Single Switched Network, Spanning Tree Protocol, Rapid Spanning Tree Protocol, Segmenting the IP Network, IP Static Routes, Distance Vector Routing with RIP, Link State Routing with OSPF, DHCP, FTP and Telnet Protocols, Simple Network Management Protocol, Introducing IPv6 Networks, IPv6 Routing Technologies, IPv6 Application Services

Network Construction

Link Aggregation, VLAN Principles, GARP and GVRP, VLAN Routing, Wireless LAN Overview, Bridging Enterprise Networks with Serial WAN Technology, Frame Relay Principles, Establishing DSL/ADSL Networks with PPPoE, Network Address Translation, Establishing Enterprise Radio Access Network Solutions.

Network Security

Access Control Lists, Authentication, Authorization and Accounting (AAA), Securing Data with IPsec and VPN, Generic Routing Encapsulation.

|-----------------------------|---------|---|---|---|-----|-----|
| Random Variables and | 3 | 3 | 0 | 0 | 40 | 60 |
| Stochastic Processes | | | | | | |

Course Outcomes:

At the end of this course students will demonstrate the ability to

- 1. Understand representation of random signals
- 2. Investigate characteristics of random processes
- 3. Make use of theorems related to random signals
- 4. To understand propagation of random signals in LTI systems

Sets and set operations; Probability space; Conditional probability and Bayes theorem; Combinatorial probability and sampling models.

Discrete random variables, probability mass function, probability distribution function, example random variables and distributions; Continuous random variables, probability density function, probability distribution function, example distributions; 18/05/2021

Joint distributions, functions of one and two random variables, moments of random variables; Conditional distribution, densities and moments; Characteristic functions of a random variable; Markov, Chebyshev and Chernoff bounds;

Random sequences and modes of convergence (everywhere, almost everywhere, probability, distribution and mean square); Limit theorems; Strong and weak laws of large numbers, central limit theorem.

Random process. Stationary processes. Mean and covariance functions. Ergodicity. Transmission of random process through LTI. Power spectral density

|----------------------|---------|---|---|---|-----|-----|
| VLSI/ULSI Technology | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objectives: To study various VLSI fabrication steps such as oxidation, lithography, etc.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- 1. understand the process of VLSI fabrication
- 2. Investigate the Oxidation processes for VLSI/ULSI device fabrication
- 3. Learn about the environment for VLSI/ULSI technology
- 4. Understand Lithography and deposition processes

VLSI Fabrication : Solid state diffusion modeling and technology, ion implantation technology and damage annealing, characterization of impurity profiles.

Oxidation: Kinetics of Silicon dioxide growth both for thick, thin and ultra thin films. Oxidation techniques in VLSI and ULSI, characterization of oxides films, low k and high k dielectrics for ULSI.

Environment for VLSI/ULSI Technology, Clean room and safety requirements, Wafer cleaning process and wet chemical etching techniques.

Lithography: Photolithography, e-beam lithography and newer lithography techniques for VLSI/ ULSI, mask generation. chemical vapor deposition techniques: CVD techniques for deposition of polysilicon, silicon dioxide, silicon nitrite and metal films, epitaxial growth of silicon.

Metal film deposition: Evaporation and sputtering techniques, failure mechanisms in metal interconnect multilevel metallization schemes.

Plasma and rapid thermal processing, PECVD, plasma etching and RIE techniques, RTP techniques for annealing, growth and deposition of various films for use in ULSI

|----------------------------|---------|---|---|---|-----|-----|
| Programming in JAVA | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes:

After this course the students will be able to:

- 1. Apply the concepts and basics of JAVA
- 2. Demonstrate the knowledge of operators and control statements
- 3. Ability to learn about Inheritance, Interface, Applets.
- 4. Learn about JAVA database connectivity

Introduction to Java: History of Java, Features of Java, Java Development Kit (JDK), Security in Java, Java Basics: Keywords; Working of Java; Including Comments; Data Types in Java; Primitive Data Types; Abstract / Derived Data Types; Variables in Java; Using Classes in Java; Declaring Methods in Java, Code to Display Test Value; The main() Method, Invoking a Method in Java; Saving, Compiling and Executing Java Programs

Operators and Control Statements: Operators, Arithmetic Operators, Increment and Decrement Operators, Comparison Operators, Logical Operators, Operator Precedence; Control Flow Statements, If-else Statement, Switch Statement, For Loop, While Loop, Do...While Loop, Break Statement Continue Statement

Arrays and Strings: Arrays; String Handling; Special String Operations; Character Extraction; String Comparison; Searching Strings; String Modification; StringBuffer

Inheritance, Package and Interface: Inheritance, Types of Relationships, What is Inheritance?, Significance of Generalization, Inheritance in Java, Access Specifiers, The Abstract Class; Packages, Defining a Package, CLASSPATH; Interface, Defining an Interface, Some Uses of Interfaces, Interfaces versus Abstract Classes Exception Handling: Definition of an Exception; Exception Classes; Common Exceptions; Exception Handling Techniques, Streams in Java: Streams Basics; The Abstract Streams; Stream Classes; Readers and Writers; Random Access Files; Serialization

Applets: What are Applets?; The Applet Class; The Applet and HTML; Life Cycle of an Applet; The Graphics Class; Painting the Applet; User Interfaces for Applet; Adding Components to user interface; AWT (Abstract Windowing Toolkit) Control, Event Handling: Components of an Event; Event Classes; Event Listener; Event-Handling; Adapter Classes; Inner Classes; Anonymous Classes, Swing: Concepts of Swing; Java Foundation Class (JFC); Swing Packages and Classes; Working with Swing- An Example; Swing Components

Java Data Base Connectivity: Java Data Base Connectivity; Database Management; Mechanism for connecting to a back end database; Loading the ODBC driver, RMI, CORBA and Java Beans: Remote Method Invocation (RMI); RMI Terminology; Common Object Request Broker Architecture (CORBA), What is Java IDL?, Example: The Hello Client-Server; Java Beans, The BeanBox, Running the BeanBox.

|------------------------------------|---------|---|---|---|-----|-----|
| Speech and Audio Processing | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes:

At the end of the course, students will demonstrate the ability to:

- 1. Mathematically model the speech signal
- 2. Analyze the quality and properties of speech signal.
- 3. Modify and enhance the speech and audio signals

Introduction- Speech production and modeling - Human Auditory System; General structure of speech coders; Classification of speech coding techniques – parametric, waveform and hybrid; Requirements of speech codecs –quality, coding delays, robustness.

Speech Signal Processing- Pitch-period estimation, all-pole and all-zero filters, convolution; Power spectral density, periodogram, autoregressive model, autocorrelation estimation.

Linear Prediction of Speech- Basic concepts of linear prediction; LinearPrediction Analysis of non-stationary signals –prediction gain, examples; Levinson-Durbin algorithm; Long term and short-term linear prediction models; Moving average prediction.

Speech Quantization- Scalar quantization—uniform quantizer, optimum quantizer, logarithmic quantizer, adaptive quantizer, differential quantizers; Vector quantization — distortion measures, codebook design, codebook types.

Scalar Quantization of LPC- Spectral distortion measures, Quantization based onreflection coefficient and log area ratio, bit allocation; Line spectral frequency – LPC to LSF conversions, quantization based on LSF.

Linear Prediction Coding- LPC model of speech production; Structures of LPCencoders and decoders; Voicing detection; Limitations of the LPC model.

Code Excited Linear Prediction-CELP speech production model; Analysis-by-synthesis; Generic CELP encoders and decoders; Excitation codebook search – state-save method, zero-input zerostate method; CELP based on adaptive codebook, Adaptive Codebook search; Low Delay CELP and algebraic CELP. Speech Coding Standards-An overview of ITU-T G.726, G.728 and G.729standards.

Course Objective

This laboratory course deals with the Hands-on experiments related to the study and investigate the outputs of various Analog and digital modulation techniques.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. study and verify the characteristics and output waveforms of AM, FM, PCM
- 2. study and compare noise in AM and FM systems
- 3. investigate the output responses of PAM, PCM, PSK, FSK, MSK.

List of Experiments:

- 1.To study the Characteristics/output waveform of Amplitude Modulation and demodulation techniques.
- 2. To Investigate and compare the outputs of SSB, DSB-SC and VSB Modulation systems.
- 3. To study and compare Noise Interference in AM and FM systems.
- 4.To study the effect of threshold in Angle modulation.
- 5. To study the effect of Sampling and Investigate the Output response of Pulse Amplitude Modulation.
- 6. To Investigate the Output response of Pulse Code Modulation.
- 7. To Study the output response of PSK & FSK.
- 8. To Study Delta modulation and demodulation technique and observe effect of slope overload.
- 9. To study the output response of QAM.
- 10. To study the output response of Continuous Phase Modulation.
- 11. To study the output response of Minimum Shift keying.
- 12. Digital link simulation; error introduction & error estimation in a digital link using MATLAB (SIMULINK)/ communication simulation packages.

Course Outcomes

At the end of this course student will demonstrate the ability to:

- 1. Write programs to develop various signals.
- 2. Write programs to generate standard sequences.
- 3. Develop programs to verify convolution
- 4. Develop programs to design various filters.

List of Experiments:

Perform the following exercises using MATLAB

- 1. To develop elementary signal function modules (m-files) for unit sample, unit step, exponential and unit ramp sequences.
- 2. Write a program in MATLAB to generate standard sequences.
- 3. Write a program in MATLAB to compute power density spectrum of a sequence.
- 4. To develop program modules based on operation on sequences like signal Shifting, signal folding, signal addition and signal multiplication.
- 5. To develop program for finding magnitude and phase response of LTI system described by system function H(z).
- 6. To write a MATLAB programs for pole-zero plot, amplitude, phase response and impulse response from the given transfer function of a discrete-time causal system.

List of Lab Experiments on hardware:(using C6xxx board ,Code composer studio and Acarva app)

- 7. Implementation Linear and Circular Convolution
- 8. To Find DFT and IDFT of given time DT Signal
- 9. N point FFT Algorithm implementation

- Aptitude (Technical and General)
- General Awareness (Current Affairs and GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. outdoor activities and class activities.

For achieving the above, suggestive list of activities to be conducted are:

Part – A (Class Activities)

- 1. Expert and video lectures
- 2. Aptitude Test
- 3. Group Discussion
- 4. Quiz (General/Technical)
- 5. Presentations by the students
- 6. Team building Exercises

Part – B (Outdoor Activities)

- 1. Sports/NSS/NCC
- 2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc.

Evaluation shall be based on rubrics for Part – A & B

Mentors/Faculty incharges shall maintain proper record student wise of each activity conducted and the same shall be submitted to the department.

^{**}S/US - Satisfactory and Unsatisfactory

SIXTH SEMESTER

B.Tech.

Electronics & Telecommunication Engineering (ECE)

Syllabus

I K Gujral Punjab Technical University

Jalandhar-Kapurthala Highway, Kapurthala-144603 (PB)

| BTEC-601-18 | Credits | L | Т | P | Int | Ext |
|------------------------|---------|---|---|---|-----|-----|
| Wireless Communication | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to Wireless communication using suitable mathematical models.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the basic elements of Cellular Radio Systems and its design
- 2.Learn about the concepts Digital communication through fading multipath channels
- 3. Understand various Multiple Access techniques for Wireless communication
- 4. Know about the Wireless standards and systems

Unit 1: Elements of Cellular Radio Systems Design: Basic cellular system, Performance criteria, Components and Operation of cellular systems, Planning a cellular system, Analog & Digital cellular systems, Concept of frequency reuse channels, Co-channel interference, Reduction factor, desired C/I for a normal case in an omni directional antenna system, Cell splitting.

Unit 2: Digital Communication through fading multipath channels: Fading channels and their characteristics- Channel modelling, Digital signalling over a frequency non selective slowly fading channel. Concept of diversity branches and signal paths. Combining methods: Selective diversity combining, Switched combining, Maximal ratio combining, Equal gain combining.

Unit 3: Multiple Access Techniques for Wireless Communications: Introduction, Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Spread Spectrum Multiple Access, Space Division Multiple Access (SDMA), Packet Radio Protocols; Pure ALOHA, Slotted ALOHA.

Unit 4: Wireless Systems & Standards: AMPS and ETACS, United states digital cellular (IS- 54 & IS 136), IEEE Standards, Global system for Mobile (GSM): Services, Features, System Architecture and Channel Types, Frame Structure for GSM, Speech Processing in GSM, GPRS/EDGE specifications and features. 3G systems: UMTS & CDMA 2000 standards and specifications. CDMA Digital standard (IS 95): Frequency and Channel specifications, Forward CDMA Channel, Reverse CDMA Channel, Wireless Cable Television.

Unit 5: Evolution of Communication Generations: Introduction to Bluetooth, Zigbee, LTE-Advance systems, 4G & 5G Mobile techniques and Emerging technologies.

Recommended Books:

- 1. T.S. Rappaport, Wireless Communications: Principles and Practice, 2nd Edition, Pearson Education Asia, 2010.
- 2. William C Y Lee, Mobile Cellular Telecommunications, 2nd Edition, MGH, 2004.
- 3. Raj Pandya, —Mobile and Personal Communication systems and services, Prentice Hall of India, 2001.
- 4. Wireless and Digital Communications; Dr. Kamilo Feher (PHI), 1998.

| BTCS-504-18 | Credits | L | T | P | Int | Ext |
|-------------------|---------|---|---|---|-----|-----|
| Computer Networks | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to Computer networking.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1.Explain the functions of the different layer of the OSI Protocol
- 2.Describe the function of each block of wide-area networks (WANs), local area networks (LANs) and Wireless LANs (WLANs)
- 3. Develop the network programming for a given problem related TCP/IP protocol
- 4.Learn about DNS DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls using open source available software and tools.

Unit 1: Data Communication - Data Communication System & its Components, Representation of data and its flow Networks, Various Connection Topologies, Protocols and Standards, OSI model, Transmission Media, LAN: Wired LAN, Wireless LANs, Connecting LAN and Virtual LAN, Techniques for Bandwidth utilization.

Unit 2: Data Link Layer and Medium Access Sub Layer - Design issues, Framing, Error detection and correction codes: checksum, CRC, hamming code, Data link protocols for noisy and noiseless channels, Sliding Window Protocols: Stop & Wait ARQ, Go-back-N ARQ, Selective repeat ARQ, Data link protocols: HDLC and PPP

Unit 3: Network Layer Switching - Logical addressing IPV4, IPV6; Address mapping – ARP, RARP, BOOTP and DHCP–Delivery, Forwarding and Unicast Routing protocols.

Unit 4: Transport Layer Process to Process Communication - User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP Congestion Control; Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.

Unit 5: Application Layer - Domain Name Space (DNS), DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), World wide web (WWW), HTTP, SNMP, Bluetooth, Firewalls.

Recommended Books:

- 1. Data Communication and Networking, 4th Edition, Behrouz A. Forouzan, McGraw-Hill 2007.
- 2. Data and Computer Communication, 8th Edition, William Stallings, Pearson Prentice Hall India 2007.
- 3. Computer Networks, 8th Edition, Andrew S. Tanenbaum, Pearson New International Edition 2013.
- 4. Internetworking with TCP/IP, Volume 1, 6th Edition Douglas Comer, Prentice Hall of India 2015.
- 5. TCP/IP Illustrated, Volume 1, W. Richard Stevens, Addison-Wesley, USA 2012.

|---|---------|---|---|---|-----|-----|
| Optical Fibres and Communication | 4 | 3 | 1 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to Optical Fibres and Communication.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the basics of Optical Communication and Optical fibres
- 2.Learn about the Optical Transmitters and Receivers
- 3. Expalin the Light wave Architecture and systems
- 4. Ability to explain the manufacturing, modulation and wave mixing in Optical Communication

Unit 1: Introduction

Need of Fiber Optic Communications, Evolution of Light wave Systems, Channel Multiplexing, Modulation Formats, Optical Communication Systems, Light wave System Components; Optical Fibers as a Communication Channel, Optical Transmitters, Optical Receivers.

Unit 2: Optical Fibers

Geometrical-Optics Description; Step-Index Fibers, Graded Index Fibers, Wave Propagation; Maxwell's Equations, Fiber Modes, Single-Mode-Fibers, Dispersion in Single-Mode Fibers; Group Velocity Dispersion, Material Dispersion, Wave guide Dispersion, Higher-order Dispersion, Polarization-Mode Dispersion, Dispersion-Induced Limitations; Basic Propagation Equation, Chirped Gaussian Pulses, Limitations on the Bit Rate, Fiber Bandwidth, Fiber Losses; Attenuation Coefficient, Material Absorption, Rayleigh Scattering, wave guide Imperfections, Nonlinear Optical effects; Stimulated Light Scattering, Nonlinear Phase Modulation, Four Wave Mixing, Fiber Manufacturing; Design Issues, Fabrication Methods, Cables and Connectors.

Unit 3: Optical Transmitters

Basic Concepts; Emission and Absorption Rates, p-n Junctions, Non radiative Recombination, Semi conductor Materials, Light Emitting Diodes; Power-current Characteristics, LED spectrum, Modulation Response, LED Structures, Semi Conductor Lasers; DFB Lasers, Coupled Cavity semiconductor Lasers, Tunable Semiconductor Lasers, Vertical Cavity Semiconductor Lasers, Laser Characteristics, Small & Large Signal Modulation, Spectral Line width.

Unit 4: Optical Receivers

Basic concepts, p-n Photo Diodes, p-i-n Photo Diodes, Avalanche Photo Diode, MSM Photo detector, Receiver Design, Receiver Noise; Noise mechanism, Receiver sensitivity; Bit error rate, Minimum Receiver Power, Sensitivity Degradation, Receiver Performance.

Unit 5: Light Wave Systems

Overview: System Architecture, Loss limited Light wave systems, Dispersion limited Light wave systems, Power Budget, Long Haul systems, Sources of Power Penalty; Model Noise, Dispersive Pulse Broadening, Mode Partition Noise, Frequency Chirping, Reflection Feedback Noise, WDM Light wave systems, Optical TDM Systems.

Recommended Books:

- 1. Senior J. Optical Fiber Communications, Principles & Practice, PHI 1985.
- 2. Keiser G., Optical Fiber Communication, Mc Graw-hill 2008.
- 3. Govind P. Agrawal, Fiber Optics Communication Systems, John Wiley & Sons (Asia) Pvt. Ltd 1998.
- 4. Djafar K. Mynbeav, Fiber-Optics Communications Technology, Pearson 2001.

| BTEC-604-18 | Credits | L | T | P | Int | Ext |
|-----------------------|---------|---|---|---|-----|-----|
| Microwave and Antenna | 4 | 2 | 1 | 0 | 40 | 60 |
| Engineering | 4 | 3 | 1 | U | 40 | 00 |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to Microwave and Antenna Engineering.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1.Understand the working and operation of various Microwave Tubes and Microwave Solidstate devices.
- 2.Learn about various important Microwave Components and the Microwave measurements that can be carried out.
- 3.Explain the basic concepts and types of Antennas and its regions.
- 4.Describe the important concepts of Antenna Arrays and Antenna Aperture.

Unit 1: Microwave Tubes and Solid-State devices: Limitations of Conventional tubes, construction, Operation and properties of Klystron Amplifier, reflex Klystron, Magnetron, Travelling Wave Tube (TWT), Backward Wave Oscillator (BWO), Crossed field amplifiers. Microwaves Transistors: (Bipolar, FET), Transferred Electron Devices (Gunn diode), Avalanche transit time effect (IMPATT, TRAPATT), Microwave Amplification by Stimulated Emission of Radiation (MASER).

Unit 2: Microwave Components and Measurements: Analysis of Microwave components using S-parameters, Junctions (E, H, Hybrid), Directional coupler, Bends and Corners, Microwave posts, S.S. tuners, Attenuators, Phase shifter, Ferrite devices (Isolator, Circulator, Gyrator), Cavity resonator, Matched termination. Power measurements using calorimeters and bolometers, Measurement of Standing Wave Ratio (SWR), Frequency and wavelength.

Unit 3: Antennas: Concept of radiation in Single wire, Two wire, and Dipole, Introduction to Antenna parameters: Reflection Co-efficient, VSWR, Radiation pattern, Directivity, Gain. Infinitesimal dipole, Short dipole and half wave dipole, Far-field, Radiating near-field and reactive near-field regions, Monopole and Half wave dipole, Microstrip Patch & Fractal Antennas.

Unit 4: Antenna Arrays and Aperture Antennas: Array of two-point sources, Array factor, Array configurations, Hansen-woodyard end fire array, n-element linear array with uniform amplitude and spacing, n-element linear array with non-uniform spacing, Binomial and Dolph-Tschebysceff array, Scanning Arrays. Aperture Antennas: Rectangular and circular aperture antennas, Horn antenna, Babinet's Principle, Slot Antenna, Loop antenna.

Recommended Books:

- 1. M.Kulkarni, Microwave and Radar Engineering, Umesh Publications, 5th Edition, 2018.
- 2. Jordan E.C., Electromagnetics and radiating systems, PHI 1995.
- 3. J.D.Krauss, Antenna Theory, McGraw Hill 1999.
- 4. C.A.Balanis, Antenna Theory, John Wiley & sons 4th Edition 2016.
- 5. R.L. Yadava, Antenna and wave propagation, PHI 2011

Professional Elective - 2

| BTEC-906A-18 | Credits | L | T | P | Int | Ext |
|-------------------|---------|---|---|---|-----|-----|
| WLAN and Security | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to Wireless Local Area Network (WLAN) and security.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- 1. Develop an understanding WLAN and its architecture
- 2. Understand the gap between wired and wireless networks
- 3. Build the knowledge of security building blocks which enable them to solve the problems of designing security solutions in wireless networks.
- 4. Learn the wireless LAN authentication protocols in detail, and enhance the skills of configuring a secure wireless network.

- **Unit 1: Fundamentals of Wireless Communication -** Fundamentals of Wireless Communication, Advantages, Limitations and Applications, Wireless Media, Infrared Modulation Techniques, DSSS and FHSS, Multiple access technique: TDMA, CDMA, FDMA, CSMA, OFDMA, Frequency Spectrum, Radio and Infrared Frequency Spectrum
- **Unit 2: Wireless local area networks (WLAN)** Introduction, Types of WLANs, WLAN Equipment, WLAN topologies and Technologies, IEEE 802.11 WLAN: Architecture, Physical Layer Standards.
- **Unit 3: WLAN Medium access control -** Challenges for the MAC, MAC Access Modes and Timing, Contention-Based Access Using the DCF, Fragmentation and Reassembly, Frame Format, Encapsulation of Higher-Layer Protocols Within 802.11, Contention-Based Data Service
- **Unit 4: WLAN Framing -** General frame format, Frame Control field, Format of individual frame types: Control frames, Data frames, Management frames, Types of Management Frames Management Frame fields, Frame Transmission and Association and Authentication States
- **Unit 5: Wireless Security -** Wireless Application Protocol, WAP Security, Authentication, Integrity, Confidentiality, Security Issues with Wireless Transport Layer Security (WTLS), Wireless LAN Security, Access Point Security, Work Station Security, Safeguarding Wireless LAN's.
- **Unit 6: WLAN Security and Authentication -** Cryptographic Background to WEP, WEP Cryptographic Operations, Problems with WEP, The Extensible Authentication Protocol, EAP Packet Format, EAP Requests and Responses, EAP Success and Failure, EAP Exchange, 802.1x: Network Port Authentication, 802.1x Architecture and Nomenclature, EAPOL Encapsulation, 802.1x Exchange, 802.1x on Wireless LANs

- 1. Eldad Perahia and Robert Stacey, Next Generation Wireless LANs: 802.11n and 802.11ac (2nd Edition), Cambridge University Press 2010.
- 2. Matthew S. Gast, O'Reilly, 802.11 Wireless Networks: The Definitive Guide, 2nd Edition, Media, Inc.1998.
- 3. Pejman Roshan, Jonathan Leary, 802.11 Wireless LAN Fundamentals, Cisco Press, 2014.
- 4. Brijendra Singh, Network Security and Management, 3rd edition, PHI 2000.

|--------------------------------|---------|---|---|---|-----|-----|
| Satellite Communication | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to the understanding of Satellite Communication.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Visualize the architecture of satellite systems as a means of high speed, high range communication system.
- 2. State various aspects related to satellite systems such as orbital equations, sub-systems in a satellite, link budget, modulation and multiple access schemes.
- 3. Understand the Phenomena in Satellite communication.
- 4. Understand the general Link Design equation and the concepts related to it.
- 5. Learn about VSAT system and its applications.
- Unit 1 Introduction to Satellite Communication: Principles and architecture of satellite Communication, Brief history of Satellite systems, advantages, disadvantages, applications and frequency bands used for satellite communication, Orbital Mechanics: Orbital equations, Kepler's laws, Apogee and Perigee for an elliptical orbit, evaluation of velocity, orbital period, angular velocity etc. of a satellite, concepts of Solar day and Sidereal day.
- **Unit 2 Satellite sub-systems:** Study of Architecture and Roles of various sub-systems of a satellite system such as Telemetry, tracking, command and monitoring (TTC & M), Altitude and orbit control system (AOCS), Communication sub-system, power sub-systems etc.
- **Unit 3 Typical Phenomena in Satellite Communication:** Solar Eclipse on satellite, its effects, remedies for Eclipse, Doppler frequency shift phenomena and expression for Doppler shift. Received signal power equations.
- **Unit 4 Satellite Link Design:** Introduction, General Link Design Equations, System Noise Temperature C/N and G/T Ratio, Atmospheric and Ionospheric Effects on Link design, Uplink design, Complete Link Design, Interference effects on Complete Link design, Earth Station Parameters.
- **Unit 5 VSAT Satellite Systems**: Introduction, Network Architecture, VSAT Earth Station, VSAT Applications.

| CMOS and RF Circuit | 3 | 3 | 0 | 0 | 40 | 60 |
| Design | | | | | | |

Course Objective

This is one of the fundamental courses meant to understand and learn the important concepts related to CMOS and RF Circuit Design.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Get familiar with the concepts of CMOS and RF circuit designs.
- 2. Explore the design methods of RF receivers and transmitters.
- 3. Understand the concepts of Mixed signal design.
- 4. Use the design methods of Receivers and Transmitters.

Unit 1: CMOS Physics, Transceiver Specifications and Architecture -

Introduction to MOSFET Physics, Noise: Thermal, shot, flicker, popcorn noise, Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise – Specification distribution over a communication link, Homodyne Receiver, Heterodyne Receiver, Image reject, Low IF Receiver Architectures, Direct up conversion Transmitter, Two step up conversion Transmitter.

Unit 2: RF Circuits Design – Overview: RF Filter Design, Design issues in Integrated RF filters, Active RF components, Matching and Biasing networks, Basic blocks in RF systems & their modelling, Design of LNA, Mixer, RF frequency synthesizer and RF Oscillators, Phase noise, Noise power and trade off, MOSFET behavior at RF frequencies, Integrated parasitic elements at high frequencies.

Unit 3: Impedance Matching and Amplifiers - S-parameters with Smith chart, Passive IC components, Impedance matching networks, Common Gate, Common Source Amplifiers, OC Time constants in bandwidth estimation and enhancement, High frequency amplifier design, Power match and Noise match.

Unit 4: Mixed Signal Design – Mixed-signal layout, Interconnects and data transmission; Voltage-mode signaling and data transmission; Current-mode signaling and data transmission, Basics of data converters; Successive approximation ADCs, Dual slope ADCs, Flash ADCs, Pipeline ADCs, Hybrid ADC structures, High-resolution ADCs, DACs.

| C# AND .NET Programming | 3 | 3 | 0 | 0 | 40 | 60 |
| | | | | | | |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to C# and .NET Programming.

Course Outcomes

At the end of this course students will demonstrate the ability

- 1. Write various applications using C# Language in the .NET Framework.
- 2.Develop distributed applications using .NET Framework.
- 3. Create mobile applications using .NET compact Framework.
- 4. Learn other concepts of .NET approach towards problem solving

Unit 1: C# Advanced Features - Delegates - Lambdas - Lambda Expressions - Events - Event Publisher - Event Listener - Strings and Regular Expressions - Generics - Collections - Memory Management and Pointers - Errors and Exceptions - Reflection.

UNIT 2: Object Oriented Aspects of C# - Class, Objects, Constructors and its types, inheritance, properties, indexers, index overloading, polymorphism, sealed class and methods, interface, abstract class, abstract and interface, operator overloading, delegates, events, errors and exception, Threading.

Unit 3: Base Class Libraries & Data Manipulation - Diagnostics -Tasks, Threads and Synchronization - .Net Security - Localization -Manipulating XML- SAX and DOM - Manipulating files and the Registry-Transactions -ADO.NET- Peer-to-Peer Networking - PNRP - Building P2P Applications - Windows Presentation Foundation (WPF).

Unit 4: .NET Framework and Compact Framework - Assemblies - Shared assemblies - Custom Hosting with CLR Objects - App domains -Core XAML - Bubbling and Tunneling Events- Reading and Writing XAML - .Net Compact Framework - Compact Edition Data Stores - Errors, Testing and Debugging -Optimizing performance - Packaging and Deployment - Networking and Mobile Devices

| Natural Language | 3 | 3 | 0 | 0 | 40 | 60 |
| Processing | | | | | | |

Course Objective

This is one of the fundamental courses meant to understand the important concepts related to Natural Language Processing.

Course Outcomes

- 1.Demonstrate a basic understanding of the concepts of Natural language Processing
- 2.Learn about various Word forms and models therein
- 3.Understand Structures by using Parsing and its Algorithms
- 4.Explain about the Lexical knowledge Networks and related Web applications

Unit 1 – Introduction: Biology of speech processing, place and manner of articulation, word boundary detection, Argmax computation, HMM and speech recognition

Unit 2 - Words and Word forms: Morphology fundamentals, Morphological diversity of Indian languages, Morphology paradigms, FSM based morphology, automatic morphology learning, shallow parsing, named entities, Maximum entropy models, random fields

Unit 3 – Parsing : Context-free grammars and languages, Theories of Parsing, Parsing algorithms, rule based and probabilistic parsing, scope ambiguity and attachment ambiguity resolution

Unit 4 – Word Sense and Word Net: Lexical knowledge networks, Wordnet theory, Indian languages wordnet, multilingual dictionaries, semantic roles, word sense disambiguation, metaphors

Unit 5 - Web 2.0 Applications: Sentiment Analysis, text entailment, robust and scalable machine translation, question answering, multilingual setting, cross lingual information retrieval.

| Optical Fibres and Communication | 1 | 0 | 0 | 2 | 30 | 20 |
| Lab | 1 | U | U | 2 | 30 | 20 |

Course Objective

This is one of the experimental courses meant to understand the important concepts related to Optical Fibres and Communication.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. To perform experiments based on optical communication in order to understand in depth concepts of latest communication system.
- 2. To study various types of optical sources and light detectors
- 3. To know methods of slicing and connecting techniques of optical fibres
- 4. To study different types of losses in optical fibres.
- 5. To know applications of optical fibres.

List of Experiments:

The student has to perform 8 to 10 Lab experiments from the below:

- 1. Study and measurement of Attenuation and Loss in optical fibre.
- 2. Study and measurement of bending loss in optical fibre.
- 3. Study and measurement of numerical aperture of optical fibre.
- 4. Measurement of optical power using optical power meter.
- 5. To Study the transmission of TDM signal through optical fibre.
- 6. To determine the bit rate of the optical fibre link.
- 7. Study of various multiplexing techniques.
- 8. To determine the BER of wireless system using M-ARY (BPSK,QPSK,8PSK,16PSK) and QAM technique.
- 9.To learn fibre splicing techniques and to become familiar with the use of optical time domain reflectometry in characterizing optical fibres.
- 10.To establish fibre optic analog link and to study the relationship between the input signal & received signal.
- 11.To study the VI characteristics of fibre optic source and Photo Detector.
- 12.Simulation of an optical communication system & calculation of its BER and Q factor using simulator.

| BTEC-612-18 | Credits | L | Т | P | Int | Ext |

| Microwave and Antenna | 1 | 0 | 0 | 2 | 20 | 20 |
| Engineering Lab | 1 | U | 0 | 2 | 30 | 20 |

Course Objective

This is basic course meant to give hands on experience of various types of Microwave components and important measurements related to Microwave and Antenna Engineering.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Learn about general Microwave components and Microwave bench.
- 2. Measure common parameters related to Microwave Oscillator(s).
- 3. Determine frequency and wavelength of waveguides.
- 3. Measure and plot radiation patterns of various types of Antennas.

List of Experiments:

The student has to perform 8 to 10 Experiments from the below:

- 1. To study various Microwave Components and Instruments.
- 2. To study the V-I Characteristics of Gunn Diode Oscillator at X-band.
- 3. To study Output power and Frequency as a function of voltage using Gunn Diode Oscillator at X-band.
- 4. To Study the characteristics of a Reflex Klystron oscillator.
- 5. To determine the Standing Wave Ratio (SWR) and Voltage standing wave ratio (VSWR).
- 6. To measure the dielectric constant of a material at X-band.
- 7. To determine the frequency & wavelength in a rectangular waveguide.
- 8. Measurement of coupling factor and Isolation of a Directional coupler using X-band.
- 9. To measure the Attenuation/Insertion Loss of an attenuator.
- 10. Determination of the phase-shift of a phase shifter.
- 11. To plot the Radiation pattern of an antenna.
- 12. To study Simple Dipole ($\lambda/2$ or $\lambda/4$ or $3\lambda/2$) antenna (all or any of these single dipole antennas) and Folded Dipole $\lambda/2$ antenna.
- 13. To study 3/5/7-element Yagi-Uda Folded Dipole antenna.
- 14. To study the Radiation pattern, Gain, Directivity of a Slot/Loop Antenna.

|-------------|---------|---|---|---|-----|-----|
| Project - I | 3 | 0 | 0 | 3 | 60 | 40 |

The object of Project Work I is to enable the student to take up investigative study in the broad field of Electronics & Communication Engineering, either fully theoretical/practical or involving both theoretical and practical work to be assigned by the Department on an individual basis or two/three students in a group, under the guidance of a Supervisor.

This is expected to provide a good initiation for the student(s) in R&D work. The assignment may normally include:

- 1. Survey and study of published literature on the assigned topic;
- 2. Working out a preliminary Approach to the Problem relating to the assigned topic;
- 3. Conducting preliminary Analysis/Modelling/Simulation/Experiment/Design/Feasibility;
- 4. Preparing a Written Report on the Study conducted for presentation to the Department;
- 5. Final Seminar, as oral Presentation before a departmental committee.

The students shall have to design two Projects (i.e. Project-I and Project-II in 6th Semester and 7th Semester, respectively). The projects must involve originality, innovation and business idea. Assessment will be based on the work performance & report submitted.

^{*} As stated in the IKGPTU B.Tech 1st Year Scheme and Syllabus

* Guidelines regarding Mentoring and Professional Development

The objective of mentoring will be development of:

- Overall Personality
- Aptitude (Technical and General)
- General Awareness (Current Affairs and GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. outdoor activities and class activities.

For achieving the above, suggestive list of activities to be conducted are:

Part – A (Class Activities)

- 1. Expert and video lectures
- 2. Aptitude Test
- 3. Group Discussion
- 4. Quiz (General/Technical)
- 5. Presentations by the students
- 6. Team building Exercises

Part – B (Outdoor Activities)

- 1. Sports/NSS/NCC
- 2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc.

Evaluation shall be based on rubrics for Part – A & B

Mentors/Faculty incharges shall maintain proper record student wise of each activity conducted and the same shall be submitted to the department.

| Cloud Computing and | 3 | 3 | 0 | 0 | 40 | 60 |
| Services | | | | | | |

Course Objective:

The main objective of this course is to enlighten the students with the basic concepts of Cloud Computing along with the services and application by their types which would facilitate to the humans to solve the real world problems.

Course Outcomes:

After completion of the course, the students would able to:

- 1. Understanding concept of cloud computing and analyze trade-off between deploying application on cloud and using local infrastructure
- 2. Understanding the concept of virtualized environment and virtualization software (Hypervisors)
- 3. Exploring Cloud Services and Applications by their Type
- 4. Securing the cloud and ensuring its safety using various Encryption techniques.
- 5. Deploying Application on Commercial Cloud platforms such as Google Cloud Platform, Amazon Web Services, Microsoft Azure

Unit 1: Introduction to Cloud Computing - Evolution of cloud computing- studying Grid computing, Parallel computing, Distributed computing and Utility computing, defining cloud computing, examining the characteristics of cloud computing, cloud types, economic value of Cloud

Unit 2: Virtualization Techniques - virtualization technology, understanding Hypervisors, overview of x86 virtualization, types of virtualization, virtualization products, cloud interoperability standards, characteristics of virtualized environment, pros and cons of virtualization, understanding Machine Imaging, Porting Applications, virtualization and cloud computing

Unit 3: Cloud Computing Architecture/ Understanding Services and Applications by type

- Exploring the cloud computing Stack, Cloud service Models, Cloud service model architectures, Understanding Infrastructure as a service (IaaS) architecture, understanding Platform as a service (PaaS) architecture, understanding SaaS Software as a service (SaaS), examples of IaaS software, PaaS software, Examples of SaaS applications, Compliance as a Service (CaaS), Identity as a service (IaaS)

Unit 4: Cloud deployment scenarios - Cloud deployment models, Public clouds, Hybrid clouds, Community, Virtual private clouds, Vertical and special purpose, Migration paths for cloud, Selection criteria for cloud deployment.

Unit 5: Understanding Cloud Security - Securing the cloud, Security Boundaries of Cloud, Cloud security reference model, establishing Identity and Presence, understanding Broked Cloud storage Access, Understanding security risks and Security breaches, Steps to reduce cloud security breaches, Encryption techniques, Encryption & Encrypting data, Symmetric key encryption, Asymmetric key encryption, Digital signature, SSL

Unit 6: Open Source and Commercial Cloud Platforms - Using Google Web Services, Using Amazon Web Services (AWS), Using Microsoft Cloud Services and other Cloud computing Platforms. Research Trends in Cloud Computing: An introduction to Fog computing.

Recommended Books:

- 1. Raj Kumar Buyya, James Broberg, Cloud Computing: Principles and paradigms 2000.
- 2. Barrie Sosinsky, Cloud Computing Bible, Wiley Publications 1999.
- 3.Ricardo Puttini, Thomas Erl, and Zaigham Mahmood, Cloud Computing: Concepts, Technology & Architecture, Tata MacGrawHill 1997.

|----------------------------------|---------|---|---|---|-----|-----|
| Antenna Radiating Systems | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes:

At the end of the course, students will demonstrate the ability

- To understand the basic concepts of radiation.
- To understand various antenna types.
- To analyse the radiation pattern of antenna arrays.
- To understand the concept of various wave propagation techniques.
- To understand the concept of radiating systems on environment.

Unit 1: Antenna Fundamentals - Power density, directivity, gain, radiation resistance, input impedance, radiation patterns, beam width, bandwidth and polarization. Retarded potential, Matching – Baluns, Polarization mismatch, Antenna noise temperature & SNR, Linear and array antennas - Arrays of two point sources – Broad side and end fire arrays, binomial array - Principle of pattern multiplication –Adaptive arrays.

Unit 2: Fundamentals of Radiation - Radiation from a current element and monopole – Radiation from a Quarter-wave dipole, half-wave and centre-fed dipole – Near and far fields, current distribution of dipole antennas. Radiation from oscillating dipole, Half wave dipole, Folded dipole. Radiation through an Aperture, Radiation from Electromagnetic Horns.

Unit 3: Special Purpose Antennas: (Qualitative treatment only) Loop antennas, Travelling wave antennas, V and rhombic antennas, Horn antennas, Yagi-Uda arrays, Wideband antennas, Log periodic antennas. Babinet's principle – Slot radiators- Parabolic reflectors – Radiation pattern, aperture efficiencies – Feeding techniques for parabolic antennas. 18/05/2021

Unit 4: Antenna Measurements - Introduction, Concepts - Reciprocity, Near and Far Fields, Coordinate System, Sources of Errors. Patterns to be Measured, Directivity Measurement, Gain Measurements (by Comparison, Absolute and 3-Antenna Methods).

Unit 5: Environmental effects - Concept of Electromagnetic interference (EMI); EMC and its advantages. effect of radiating systems on environment, techniques to suppress EMI.

Recommended Books:

- 1. A. R. Harish, M. Sachidananda, Antennas and Wave Propogation, Oxford University Press.
- 2. Edward Conrad Jordan and Keith George Balmain, Electromagnetic Waves and Radiating Systems, PHI.
- 3. R.L. Yadava, Electromagnetic Waves, Khanna Publishing House, Delhi.
- 4. A. Das, Sisir K. Das, Microwave Engineering, Tata McGraw Hill.
- 5. John D Krauss, Ronald J Marhefka and Ahmad S. Khan, Antennas and Wave Propagation, Fourth Edition, Tata McGraw Hill.

| Robotics and Automation | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective:

The main objective of this course is to enlighten the students with the basic fundamentals of Robotics, Robotic Transformation, Simulation and programming along with Automation in Robotics & Manufacturing Industries so that they will be able to design the robots which would facilitate to the humans to solve the real world problems.

Course Outcomes:

After completion of the course, the students would able to:

- 1. Understand the basics of robotics
- 2. Know the robot transformation and sensors
- 3. Understand the simulation techniques essential for the robots designing.
- 4. Get acquainted with various automation technologies in manufacturing and process industries.
- 5. Select suitable major control components required to automate a process.

Unit 1: Introduction and Robotics Principles - Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems- Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems- Pneumatic and Electric system. Work Volume, Drive systems, Control System & Dynamics, Principles: Straight lines, Angles and optimal moves circular interpolation, Robotic functions Geometrical, commands, Edit commands. Selecting robot views.

Unit 2: End effectors and Control System - Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design, Control System Analysis, Activation & Feedback Components, Position Sensor, Velocity Sensors. Manipulator, Kinematics, Transformations, Robot Arm, Kinematics & Dynamics.

18/05/2021

.

Unit 3: ROBOT TRANSFORMATIONS AND SENSORS - Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation- Homogeneous coordinates, multiple transformation-Simple problems. Sensors in robot — Touch sensors, Range Sensors, Light Sensors, Pressure Sensors, Sensor Based Systems, Uses of Sensors in Robotics.

Unit 4: Introduction to Automation and its mechanisms - Concept and scope of automation: Socio economic impacts of automation, Types of Automation, Low Cost Automation, Introduction- Automation in production system, Principles and strategies of automation, Basic elements of an automated system. Advanced automation functions, Levels of automations, Automated flow lines and transfer mechanisms, Analysis of transfer lines without storage, Automated flow lines with storage buffers.

Unit 5: Automation in Robotics - Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems-Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems- Pneumatic and Electric system. Work Volume, Drive systems, Control System & Dynamic, Principles: Straight lines, Angles and optimal moves circular interpolation, Robotic functions Geometrical , commands, Edit commands.

|---------------------------|---------|---|---|---|-----|-----|
| Python Programming | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective:

The main objective of this course is to enlighten the students with the basic fundamentals of Python programming, its functions & the concept of Eratosthenes.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Read and write simple Python programs.
- 2. Develop Python programs with conditionals and loops.
- 3. Define Python functions and to use Python data structures—lists, tuples, dictionaries.
- 4. Perform input/output operations with files in Python.
- 5. Execute Searching, sorting and merging in Python.

Unit I: Introduction - The Programming Cycle for Python, Python IDE, Interacting with Python Programs, Elements of Python, Type Conversion. Basics: Expressions, Assignment Statement, Arithmetic Operators, Operator Precedence, Boolean Expression.

Unit 2: Functions - Parts of A Function, Execution of A Function, Keyword and Default Arguments, Scope Rules. String: Length of the string and perform Concatenation and Repeat operations in it. Indexing and Slicing of Strings. Python Data Structure: Tuples, Unpacking Sequences, Lists, Mutable Sequences, List Comprehension, Sets, Dictionaries Higher Order Functions: Treat functions as first class Objects, Lambda Expressions.

Unit 3: Sieve of Eratosthenes - Generate prime numbers with the help of an algorithm given by the Greek Mathematician named Eratosthenes, whose algorithm is known as Sieve of Eratosthenes. File I/O: File input and output operations in Python Programming Exceptions and Assertions Modules: Introduction, Importing Modules, Abstract Data Types: Abstract data types and ADT interface in Python Programming. Classes: Class definition and other operations in the classes, Special Methods (such as _init_, _str_, comparison methods and Arithmetic methods etc.), Class Example, Inheritance, Inheritance and OOP.

Recommended Books:

- 1. Allen B. Downey, "Think Python: How to Think Like a Computer Scientist, 2nd edition, Updated for Python 3, Shroff/OReilly Publishers, 2016.
- 2. Guido van Rossum and Fred L. Drake Jr, An Introduction to Python-Revised and updated for Python 3.2, Network Theory Ltd., 2011.
- 3. John V Guttag, Introduction to Computation and Programming Using Python, Revised and expanded Edition, MIT Press, 2013
- 4. Robert Sedgewick, Kevin Wayne, Robert Dondero, Introduction to Programming in Python: An Inter-disciplinary Approach, Pearson India Education Services Pvt. Ltd., 2016.
- 5. Timothy A. Budd, Exploring Python, Mc-Graw Hill Education (India) Private Ltd.,,2015.
- 6. Kenneth A. Lambert, Fundamentals of Python: First Programsl, CENGAGE Learning, 2012.
- 7. Charles Dierbach, Introduction to Computer Science using Python: A Computational ProblemSolving Focus, Wiley India Edition, 2013.

|-----------------------------------|---------|---|---|---|-----|-----|
| Adaptive Signal Processing | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective:

The main objective of this course is to enlighten the students with the basic fundamentals of Adaptive Signal Processing and related algorithms.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the non-linear control and the need and significance of changing the control parameters w.r.t. real-time situation.
- 2. Mathematically represent the 'adaptability requirement'.
- 3. Understand the mathematical treatment for the modeling and design of the signal processing systems.
- **Unit 1: General concepts of Adaptive Signal Processing** General Aspects of adaptive filtering and estimation, applications and motivation, Review of probability, random variables and stationary random processes, Correlation structures, properties of correlation matrices.
- **Unit 2: Adaptive Signal Processing Algorithms** Optimal (Wiener) filter, Method of steepest descent, extension to complex valued, LMS algorithm (real, complex), convergence analysis, weight error correlation matrix, excess mean square error and mis-adjustment Variants of the LMS algorithm: the sign LMS family, normalized LMS algorithm, block LMS and FFT based realization, frequency domain adaptive filters, Sub-band adaptive filtering.
- **Unit 3: Signal space concepts** introduction to finite dimensional vectors pace theory, subspace, basis, dimension, linear operators, rank and nullity, inner product space, orthogonality, Gram- Schmidt orthogonalization, concepts of orthogonal projection, orthogonal decomposition of vector spaces. Vector space of random variables, correlation as inner product, forward and backward projections, Stochastic lattice filters, recursive updating of forward and backward prediction errors, relationship with AR modeling, joint process estimator, gradient adaptive lattice.
- Unit 4: Introduction to recursive least squares (RLS) vector space formulation of RLS estimation, pseudo-inverse of a matrix, time updating of inner products, development of RLS lattice filters, RLS transversal adaptive filters. Advanced topics: affine projection and subspace based adaptive filters, partial update algorithms, QR decomposition and systolic array.

Recommended Books:

- 1. S. Haykin, Adaptive filter theory, Prentice Hall, 1986.
- 2. C.Widrow and S.D. Stearns, Adaptive signal processing, Prentice Hall, 1984.

| Artificial Intelligence | 3 | 3 | 0 | 0 | 40 | 60 |

Course Objective:

The main objective of this course is to enlighten the students with the basic fundamentals of Artificial Intelligence Networks, Systems, Methods and parameters. 18/05/2021

Course Outcomes

At the end of this course students will demonstrate the ability to:

- Learn about the basic understanding of Artificial Intelligent system
- explain about various types of Artificial Neural Networks & their models
- describe Artificial Neural networks methods, operation and parameters
- explore Neural Network MATLAB Toolbox

Unit 1 - Introduction

Approaches to intelligent control, Architecture of intelligent control, Linguistic reasoning, Rulebase, Knowledge representation.

Unit 2 - Artificial Neural Networks

Biological neuron, Artificial Neural Network (ANN), Mathematical Models, McCulloch Neural Model, Perceptron, Adaline and Madaline, Learning & Training in ANN, Hopfield Neural Network, Self Organizing Networks, Recurrent Networks, Associative memories.

Unit 3 - Fuzzy Logic System

Crisp Vs Fuzzy set theory, Membership functions, Fuzzy set operations, Fuzzy rules, Mamdani and Sugeno fuzzy inference systems, Defuzzification methods.

Unit 4 – ANN Methods and Parameters

Introduction and biological background of GA, String Encoding of chromosomes, Selection methods, Single & multi-point crossover operation, Mutation, Adjustment of strategy parameters such as Population size, Mutation & Crossover probabilities.

Unit 5 – Fuzzy Logic MATLAB Toolbox

Fuzzy Logic Toolbox, Neural Network Toolbox, FLS for Antilock Breaking System (ABS), GA in route planning for Travelling Sales Person, Time-Series forecasting using ANN.

- 1. Jacek M. Zurada Introduction to Artificial Neural Systems, PWS Publishing Company 1995.
- 2. S N Sivanandam, S N Deepa Principles of Soft Computing, Wiley Publications, 2007.

| Mobile Communication and | 3 | 3 | 0 | 0 | 40 | 60 |
|---------------------------------|---|---|---|---|----|----|
| Networks | | | | | | |

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the working principles of the mobile communication systems.
- 2. Understand the relation between the user features and underlying technology.
- 3. Analyze mobile communication systems for improved performance

Unit 1: Cellular concepts- Cell structure, frequency reuse, cell splitting, channel assignment, handoff, interference, capacity, power control; Wireless Standards: Overview of 2G and 3G cellular standards.

Unit 2: Signal propagation- Propagation mechanism- Reflection, Refraction, Diffraction and Scattering, Large scale signal propagation, Fading channels-Multipath and small scale fading- Doppler shift, Statistical multipath channel models, Narrowband and Wideband fading models, Delay spread, Coherence bandwidth and Coherence time, Flat and frequency selective fading, Slow and Fast fading, Average fade duration and level crossing rate.

Unit 3: Othrogonal Frequency Division Multiplexing (OFDM) – OFDM Receiver & Transmitter structures- Diversity receivers- selection and MRC receivers, RAKE receiver, Equalization, Transmit diversity-Altamonte scheme.

Unit 4: MIMO and Space time signal processing - Spatial multiplexing, diversity/multiplexing tradeoff, Performance measures- Outage, SNR, symbol/bit error rate, examples- GSM, EDGE, GPRS, IS-95, CDMA 2000 and WCDMA.

| VLSI Design | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the concepts and various processes related to VLSI
- 2. Understand the VLSI Circuit Design processes and Gate level design
- 3. Learn about VHDL Synthesis and the tools involved
- 4. Describe about CMOS Testing techniques

- B.Tech Electronics & Telecommunication Engineering (ETE) Study Scheme and Syllabus 2018 & Onwards Board of Studies Electronics & Communication Engineering, Affiliated colleges, IKGPTU Kapurthala
- **Unit 1: Introduction to VLSI** IC Technology MOS, PMOS, NMOS, CMOS & BiCMOS technologies-Oxidation, Lithography, Diffusion, Ion implantation, Metallisation, Encapsulation Probe testing, Integrated Resistors and Capacitors.
- **Unit 2: Basic Electrical properties** Electrical Properties of MOS and BiCMOS Circuits: Ids-Vds relationships, MOS transistor threshold Voltage, gm, gds, figure of merit, Passtransistor, NMOS Inverter, Various pull ups, CMOS Inverter analysis and design, Bi-CMOS Invertor.
- **Unit 3: VLSI Circuit Design Processes** VLSI Design Flow, MOS Layers, Stick Diagrams, Design Rules and Layout, 2 m CMOS Design rules for wires, Contacts and Transistors Layout Diagrams for NMOS and CMOS Inverters and Gates, Scaling of MOS circuits, Limitations of Scaling.
- **Unit 4: Gate Level Design** Logic Gates and Other complex gates, Switch logic, Alternate gate circuits, Basic circuit concepts, Sheet Resistance RS and its concept to MOS, Area Capacitance Units, Calculations: Delays, Driving large Capacitive Loads, Wiring Capacitances, Fan-In/Fan-out.
- Unit 5: VHDL Synthesis VHDL Synthesis, Circuit Design Flow, Circuit Synthesis, Simulation, Layout, Design capture tools, Design Verification Tools, Test Principles.
- **Unit 6: CMOS TESTING** CMOS Testing, Need for testing, Test Principles, Design Strategies for test, Chip level Test Techniques, System-level Test Techniques, Layout Design for improved Testability.

Recommended Books:

| Machine Learning | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes:

At the end of this course students will demonstrate the ability to:

- 1.Students have understanding of issues and challenges of Machine Learning.
- 2. Should be able to select data, model selection, model complexity etc.
- 3.Understanding of the strengths and weaknesses of many popular machine learning approaches.

Unit 1: Brief Introduction to Machine Learning & Probability Basics - Well defined learning problems, Designing a Learning System, Issues in Machine Learning; THE CONCEPT LEARNING TASK - General-to-specific ordering of hypotheses, Find-S, List then eliminate algorithm, Candidate elimination algorithm, Inductive bias Probability Basics Linear Algebra Statistical Decision Theory – Regression & Classification Bias – Variance Linear Regression Multivariate Regression

Unit 2: Dimensionality - Reduction Subset Selection, Shrinkage Methods, Principle Components Regression Linear Classification, Logistic Regression, Linear Discriminant Analysis Optimization, Classification-Separating Hyperplanes Classification

Unit 3: Artificial Neural Networks - ANNs (Early models, Back Propagation, Initialization, Training & Validation) Parameter Estimation (Maximum Likelihood Estimation, Bayesian Parameter Estimation) Decision Trees Evaluation Measures, Hypothesis Testing Ensemble Methods, Graphical Models

Unit 4: Clustering – Clustering Models, Spectral Clustering Ensemble Methods Learning Theory, Reinforcement Learning, Evaluating Hypotheses: Estimating Hypotheses Accuracy, Basics of sampling Theory, Comparing Learning Algorithms; Bayesian Learning: Bayes theorem, Concept learning, Bayes Optimal Classifier, Naïve Bayes classifier, Bayesian belief networks, EM algorithm.

Unit 5: Genetic Algorithms - an illustrative example, Hypothesis space search, Genetic Programming, Models of Evolution and Learning; Learning first order rules-sequential covering algorithms General to specific beam search-FOIL; Q Learning.

Recommended Books:

- 1. T. Hastie, R. Tibshirani, J. Friedman --- The Elements of Statistical Learning, 2e, 2008.
- 2. C. Bishop --- Pattern Recognition and Machine Learning. 2e 2010.

| Digital Image and Video | 3 | 3 | 0 | 0 | 40 | 60 |
|--------------------------------|---|---|---|---|----|----|
| Processing | | | | | | |

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Mathematically represent the various types of images and analyze them.
- 2. Process these images for the enhancement of certain properties or for optimized use of the resources.
- 3. Develop algorithms for image compression and coding.

Unit 1: Digital Image Fundamentals - Elements of visual perception, image sensing and acquisition, image sampling and quantization, basic relationships between pixels – neighborhood, adjacency, connectivity, distance measures. Image Enhancements and Filtering-Gray level transformations, histogram equalization and specifications, pixel-domain smoothing filters – linear and order-statistics, pixel-domain sharpening filters – first and second derivative, two-dimensional DFT and its inverse, frequency domain filters – low-pass and high-pass.

Unit 2: Color Image Processing - Color models—RGB, YUV, HSI; Color transformations—formulation, Color slicing, tone and color corrections; Color image smoothing and sharpening; Color Segmentation. Image Segmentation - Detection of discontinuities, edge linking and boundary detection, region-based segmentation. Multi-resolution image processing—Uncertainty principles of Fourier Transform, Time-frequency localization, Continuous wavelet transforms, Wavelet bases and multi-resolution analysis, Wavelets and Sub band filter banks, Wavelet packets. Image Compression-Redundancy—inter-pixel and psycho-visual; Still image compression standards — JPEG and JPEG-2000.

Unit 3: Fundamentals of Video Coding- Inter-frame redundancy, motion estimation techniques – full search, fast search strategies, forward and backward motion prediction, frame classification – I, P and B; Video sequence hierarchy – Group of pictures, frames, slices, macroblocks and blocks; Elements of a video encoder and decoder; Video coding standards – MPEG and H.26X.

Unit 4: Video Segmentation- Temporal segmentation—shot boundary detection, hard-cuts and soft-cuts; spatial segmentation — motion-based; Video object detection and tracking.

Recommended Books:

- 1.R.C. Gonzalez and R.E. Woods, Digital Image Processing, Second Edition, Pearson Education 3rd edition 2008.

| Introduction to Big Data | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the Evolution and basics of Big Data.
- 2. Understand the Architecture of Hadoop with its file system and its Programming.
- 3. Explain the Advanced analytical theory and methods.
- 4. Describe the challenges in handling streaming data from the real world.

Unit 1 - Evolution & Introduction of Big data: Best Practices for Big data Analytics, Big data characteristics, Validating – The Promotion of the Value of Big Data, Big Data Use Cases, Characteristics of Big Data Applications, Perception and Quantification of Value, Understanding Big Data Storage,

Unit 2 - A General Overview of High Performance Architecture: HDFS, Map Reduce and YARN – Map Reduce Programming Model. Big Data Overview Analysis of data at Rest- Hadoop analytics: Limitations of existing distributing systems, Hadoop Approach, Hadoop Architecture, Distributed file system: HDFS and GPFS, Internals of Hadoop MR engine, Hadoop cluster components, Hadoop Ecosystem, Evaluation criteria for distributed Map Reduce runtimes, Enterprise-grade Hadoop Deployment, Hadoop Implementation

Unit 3 - Advanced Analytical Theory and Methods: Overview of Clustering – K-means, Use Cases, Overview of the Method, Determining the Number of Clusters, Clustering, Classification, Segmentation, Linear regression, ML Search: Indexing and Indexing Techniques, Create inverted index using JAQL, Data Explorer Bundling Hadoop job: Application, Diagnostics, Reasons to Choose and Cautions, Classification: Decision Trees, Overview of a Decision Tree, The General Algorithm – Decision Tree Algorithms, Evaluating a Decision Tree

Unit 4 - Real time analytics: Introduction to streams computing, Challenges/limitations of conventional Systems, Solving a real time analytics problem using conventional system, Challenges to be solved - scalability, thread pooling, etc., Understanding the challenges in handling streaming data from the real world and how to address those using stream computing, Benefits of stream computing in Big Data world, Realtime Analytics Platform (RTAP), Real Time Sentiment Analysis.

Recommended Books:

- 1. Understanding Big Data: Analytics for Enterprise Class Hadoop and Streaming Data, by Chris Eaton, Paul Zikopoulos, Wiley Publication 2015.
- 2. Big Data Analytics: Turning Big Data into Big Money By Frank J. Ohlhorst, McGraw Hill 2012.
- 3. Ethics of Big Data: Balancing Risk and Innovation By Kord Davis, 2011.

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the concept of information and entropy
- 2. Understand Shannon's theorem for coding
- 3. Calculation of channel capacity
- 4. Apply coding techniques

Unit 1 – Basic Concepts of Information Theory: The concept of Amount of Information, Average Information, Entropy, Information rate, Shannon's Theorem, Mutual information; Channel capacity; BSC and other channels, Capacity of a Gaussian Channel, Bandwidth - S/N Trade-off, Introduction to Channel Capacity & Coding, Channel Models, Channel Capacity Theorem, Shannon Limit. Huffman source coding algorithm, Lempel Ziv source coding algorithm.

Unit 2 - Introduction to Error Control Coding: Linear Block Codes: Introduction to Linear Block codes, Syndrome and Error detection, Minimum distance of block code, Hamming Code. Cyclic Codes: Description of Cyclic codes, Generator and parity check matrices of cyclic codes, error detection decoding of cyclic codes. BCH Codes: Description of codes, Decoding of BCH codes, Implementation of error connection.

Unit 3 - Convolution Codes: Encoding of convolution codes, structural properties of Convolution codes, Distance Properties of convolution codes. Automatic Repeat Request Strategies: Stop and wait, Go back and selective repeat ARQ strategies, Hybrid ARQ Schemes.

| Embedded System Design | 3 | 3 | 0 | 0 | 40 | 60 | |
|-------------------------------|---|---|---|---|----|----|--|
|-------------------------------|---|---|---|---|----|----|--|

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Suggest design approach using advanced controllers to real-life situations.
- 2. Design interfacing of the systems with other data handling / processing systems.
- 3. Appreciate engineering constraints like energy dissipation, data exchange speeds etc.

Unit 1: Fundamentals of Embedded Systems - Core of the embedded system, Memory, Sensors (resistive, optical, position, thermal) and Actuators (solenoid valves, relay/switch, optocouplers), Communication Interface, Embedded firmware (RTOS, Drivers, Application programs), Power-supply (Battery technology, Solar), PCB and Passive components, Safety and reliability, Characteristics and quality attributes (Design Metric) of embedded system. Real time system's requirements, Real time issues.

Unit 2: Embedded Hardware and Design - Introduction to ARM-v7-M (Cortex-M3), ARM-v7-R (CortexR4) and comparison in between them, Study of basic communication protocols like SPI, SCI (RS232, RS485), I2C, 10 CAN, Field-bus (Profibus), USB (v2.0), Bluetooth, Zig-Bee, Wireless sensor network.

Unit 3: Embedded Software, Firmware Concepts and Design - Embedded C-programming concepts (from embedded system point of view): Optimizing forSpeed/Memory needs, Interrupt service routines, macros, functions, modifiers, data types, device drivers, Basic embedded C programs/applications for ARM-v7, Real time operating system: POSIX Compliance, Need of RTOS in Embedded system software, Foreground/Background systems, multitasking, context switching, IPC, Scheduler policies, Architecture of kernel, task scheduler, ISR, Semaphores, mailbox, message queues, pipes, events, timers, memory management.

|-----------------------|---------|---|---|---|-----|-----|
| Soft Computing | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the concepts of Soft Computing and Algorithms involved there-in
- 2. Understand Genetic Algorithms with its operators and applications
- 3. Learn about the Neural Network models and its applications
- 4. Describe the Fuzzy systems and Swarm Intelligence

Unit 1: Introduction - What is soft computing? Differences between soft computing and hard computing, Soft Computing constituents, Methods in soft computing, Applications of Soft Computing. Introduction to Genetic Algorithms- Introduction to Genetic Algorithms (GA), Representation, Operators in GA, Fitness function, population, building block hypothesis and schema theorem.; Genetic algorithms operators- methods of selection, crossover and mutation, simple GA(SGA), other types of GA, generation gap, steady state GA, Applications of GA

Unit 2: Neural Networks- Concept, biological neural system,. Evolution of neural network, McCullochPitts neuron model, activation functions, feed forward and feedback networks, learning rules — Hebbian, Delta, Perceptron learning and Windrow-Hoff, winner-take-all. Supervised learning- Perceptron learning, single layer/multilayer perceptron, Adaptive resonance architecture, applications of neural networks to pattern recognition systems such as character recognition, face recognition, Application of Neural networks in Image processing.

Unit 3: Fuzzy systems - Basic Definition and Terminology, Set-theoretic operations, Fuzzy Sets, Operations on Fuzzy Sets, Fuzzy Relations, Membership Functions, Fuzzy Rules & Fuzzy Reasoning, Fuzzy Inference Systems, Fuzzy Expert Systems, Fuzzy Decision Making; Neuro-fuzzy modeling- Adaptive Neuro-Fuzzy Inference Systems, Coactive Neuro-Fuzzy Modeling, Classification and Regression Trees, Data Clustering Algorithms, Rule base Structure Identification.

Unit 4: Swarm Intelligence- What is swarm intelligence? Various animal behavior which have been used as examples, ant colony optimization, swarm intelligence in bees, flocks of birds, shoals of fish, ant-based routing, particle swarm optimization

Recommended Books:

|-------------------------------------|---------|---|---|---|-----|-----|
| Biomedical Signal Processing | 3 | 3 | 0 | 0 | 40 | 60 |

Course Outcomes

At the end of this course students will demonstrate the ability to:

- 1. Understand the fundamentals of signal processing for various bio-signal analysis
- 2. Learn the Infinite impulse response (IIR) filter and study its applications
- 3. Attain in-depth knowledge about the basic concepts of finite impulse response (FIR) filter and study its applications
- 4. Apply different methods of signal processing techniques in analyzing the various bio-signals such as Electro cardiogram (ECG), Electro myogram (EMG) and Phonocardiogram (PCG)

Unit 1: Fundamentals of Biomedical Signal Processing (BSP) - Different types of Bioelectric signals and its basic characteristics, Sampling and aliasing, simple signal conversion systems, spectral analysis, FFT - Decimation in Time algorithm and Frequency algorithm.

Unit 2: IIR and FIR Digital Filter Design and Application - Characteristics of IIR and FIR filters, Impulse invariant method, Design of Bilinear transformation and Impulse invariant method using Butterworth technique, Design of Bilinear transformation and Impulse invariant method using Chebyshev technique, Warping and pre-warping effect, Fequency transformation, FIR filter design using windowing techniques- Rectangular, Hamming, Hanning, Blackmann Windows, Time domain filters- synchronized averaging, moving average filters.

Unit 3: Analysis of Bio-Signals for Signal Processing - P-Wave detection, QRS complex detection-derivative based method, Pan Tompkins algorithm, Template matching method, Signal averaged ECG, Analysis of heart rate variability-time domain method and frequency domain methods, Synchronized averaging of PCG envelopes, Envelogram, analysis of PCG signal, EMG signal analysis, ECG rhythm analysis, normal and ectopic ECG beats, analysis of exercise ECG, Analysis of respiration, spectral analysis of EEG signals.

| Indian Constitution | Non- | 3 | 0 | 0 | 40 | 60 |
| | credit | | | | | |

The Constitution of India is the supreme law of India. Parliament of India cannot make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the "basic structure" of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of "Constitutionalism" - a modern and progressive concept historically developed by the thinkers of "liberalism" - an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of "constitutionalism" in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America. The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India's legacy of "diversity". It has been said that Indian constitution reflects ideals of its freedom movement, however, few critics have argued that it does nottruly incorporate our own ancient legal heritage and cultural values. No law can be "static" and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India has played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution.

The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it "as one of the strongest court in the world".

Course content

- 1 Meaning of the constitution law and constitutionalism
- 2 Historical perspective of the Constitution of India
- 3 Salient features and characteristics of the Constitution of India
- 4 Scheme of the fundamental rights
- 5 The scheme of the Fundamental Duties and its legal status
- 6 The Directive Principles of State Policy–Its importance and implementation
- 7 Federal structure and distribution of legislative and financial powers between the Union and the States
- 8 Parliamentary Form of Government in India The constitution powers and status of the President of India
- 9 Amendment of the Constitutional Powers and Procedure
- 10 The historical perspectives of the constitutional amendments in India
- 11 Emergency Provisions: National Emergency, President Rule, Financial Emergency
- 12 Local Self Government Constitutional Scheme in India
- 13 Scheme of the Fundamental Right to Equality
- 14 Scheme of the Fundamental Right to certain Freedom under Article19
- 15 Scope of the Right to Life and Personal Liberty under Article21

Course Objectives: The objective of the course is to provide the basic knowledge about the Political System of the Country. The basic idea is to make the students aware of their duties and rights. Apart from it the course will aim to educate the pupils about the working of different organs of the government, various constitutional bodies and the agencies of the government. In addition to it, students will be given brief knowledge regarding the different challenges of Indian Political System, forms of Government in India and nature & dimensions of Indian Federal System. Course Pedagogy: Since the course is of Practical Importance, it is recommended that during the course students will be taken out for one visit to any place with the potential of imparting practical knowledge to the students about the Indian Political System. Such places can be Indian Parliament. State Legislative Assembly, Youth Parliament Pune. It is expected that students should be given case studies about the Indian Political System and Debates on Constitutional Issues should be organised in the campus.

Course Outcome: After the successful completion of the course students will be to understand the different dimensions of Indian Political System. They will be aware about their duties towards the fellow citizens. Students will be able to challenges of the democratic institutions and theoretical aspects of the state and its organs.

Part-1 Course objective

The course aims at imparting basis principals of thought process. Reasoning and inferencing Sustainability is at the core of Indian Traditional Knowledge Systems connecting society and nature. Holistic life style of yogic science and wisdom capsules in Sanskrit Literature are also important in modern society with rapid technological advancements and societal disruptions.

Part-1 focuses on introduction to Indian Knowledge System. Indian perspective of modern scientific world -view and basis principal of Yoga and holistic health care system.

Course Outcomes

- -Ability to understand connect up and explain basics of Indian traditional Knowledge in Modern scientific perspective.
- -Ability to understand connects up and explain basics of Indian traditional Knowledge in Modern scientific perspective.

Course contents

- i. Basic Structure of Indian Knowledge system
- ii. ii. Modern Science and Indian Knowledge system
- iii. Yoga and Holistic Health Care
- iv. iv. Case studies

Part-2 Course objective

The course aims at imparting basis principals of thought process. Reasoning and inferencing Sustainability is at the core of Indian Traditional Knowledge Systems connecting society and nature. Holistic life style of yogic science and wisdom capsules in Sanskrit Literature are also important in modern society with rapid technological advancements and societal disruptions

Part-2 focuses on Indian philosophical traditions. Indian linguistic Tradition, and Indian artistic tradition.

Course contents

- i. Philosophical Tradition
- ii. Indian Linguistic Tradition (Phonology, morphology, syntax and semantics)
- iii. Indian Artistic Tradition
- iv. Case studies

| Project Stage - II | 6 | 0 | 0 | 12 | 120 | 80 |

The object of Project Work II & Dissertation is to enable the student to extend further the investigative study taken up during Project-I, either fully theoretical/practical or involving both theoretical and practical work, under the guidance of a Supervisor from the Department alone or jointly with a Supervisor drawn from R&D laboratory/Industry. This is expected to provide a good training for the student(s) in R&D work and technical leadership. The assignment to normally include:

- 1. In depth study of the topic assigned in the light of the Report prepared under EC P1;
- 2. Review and finalization of the Approach to the Problem relating to the assigned topic;
- 3. Preparing an Action Plan for conducting the investigation, including team work;
- 4. Detailed Analysis/Modeling/Simulation/Design/Problem Solving/Experiment as needed;
- 5. Final development of product/process, testing, results, conclusions and future directions;
- 6. Preparing a paper for Conference presentation/Publication in Journals, if possible;
- 7. Preparing a Dissertation in the standard format for being evaluated by the Department.
- 8. Final Seminar Presentation before a Departmental Committee.

^{*} As stated in the IKGPTU B.Tech 1st Year Scheme and Syllabus

* Guidelines regarding Mentoring and Professional Development

The objective of mentoring will be development of:

- Overall Personality
- Aptitude (Technical and General)
- General Awareness (Current Affairs and GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. outdoor activities and class activities.

For achieving the above, suggestive list of activities to be conducted are:

Part – A (Class Activities)

- 1. Expert and video lectures
- 2. Aptitude Test
- 3. Group Discussion
- 4. Quiz (General/Technical)
- 5. Presentations by the students
- 6. Team building Exercises

Part – B (Outdoor Activities)

- 1. Sports/NSS/NCC
- 2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc.

Evaluation shall be based on rubrics for Part – A & B

Mentors/Faculty incharges shall maintain proper record student wise of each activity conducted

and the same shall be submitted to the department.

^{**}S/US - Satisfactory and Unsatisfactory
