

Engineering

Scheme & Syllabus of
Bachelor of Technology
Computer Science Engg. (Data
Science)

Batch 2023 onwards
(3rd -8th Semester)

By

Department of Academics
IK Gujral Punjab Technical
University

IK Gujral Punjab Technical University, Kapurthala
B. Tech- Computer Science and Engg. (Data Science)

Bachelor of Technology in Computer Science Engg. (Data Science)

It is a Graduate (UG) Programme of 4 years duration (8 semesters)

Courses & Examination

Scheme: Third Semester

Course Code	Type of Course	Course Title	Hours per Week			Marks Distribution		Total Marks	Credits
			L	T	P	Internal	External		
BTES 301-18	Engineering Science Course	Digital Electronics	3	0	0	40	60	100	3
BTCS 301-18	Professional Core Courses	Data structure & Algorithms	3	0	0	40	60	100	3
BTCS 302-18	Professional Core Courses	Object Oriented Programming	3	0	0	40	60	100	3
BTAM 302-23	Basic Science Course	Mathematics-III * (Probability and Statistics)	4	1	0	40	60	100	3
HSMC 101/102-18	Humanities & Social Sciences Including Management \Courses	Foundation Course in Humanities (Development of Societies/Philosophy)	2	1	0	40	60	100	3
BTES 302-18	Engineering Science Course	Digital Electronics Lab	0	0	2	30	20	50	1
BTCS 303-18	Professional Core Courses	Data structure & Algorithms Lab	0	0	4	30	20	50	2
BTCS 304-18	Professional Core Courses	Object Oriented Programming lab.	0	0	4	30	20	50	2
BTCS 305-18	Professional Core Courses	IT Workshop**	0	0	2	30	20	50	1
		Summer Institutional Training	0	0	0	0	0	0	Satisfactory/Unsatisfactory
Total			15	2	12	320	380	700	21

* These are the minimum contact hrs. allocated. The contact hrs. may be increased by an institute as per the requirement of the subject.

** Syllabus to be decided by respective institute internally. It may include latest technologies.

IK Gujral Punjab Technical University, Kapurthala
B. Tech- Computer Science and Engg. (Data Science)

Fourth Semester

Course Code	Type of Course	Course Title	Hours per Week			Marks Distribution		Total Marks	Credits
			L	T	P	Internal	External		
BTCS 401-18	Professional Core Courses	Discrete Mathematics	3	1	0	40	60	100	4
BTES 401-18	Engineering Science Course	Computer Organization & Architecture	3	0	0	40	60	100	3
BTCS 402-18	Professional Core Courses	Operating Systems	3	0	0	40	60	100	3
BTCS 403-18	Professional Core Courses	Design & Analysis of Algorithms	3	0	0	40	60	100	3
HSMC 122-18	Humanities & Social Sciences including Management Courses	Universal Human Values 2	2	1	0	40	60	100	3
EVS101-18	Mandatory Courses	Environmental Sciences	3	-	-	100	-	100	S/US
BTES 402-18	Engineering Science Course	Computer Organization & Architecture Lab	0	0	2	30	20	50	1
BTCS 404-18	Professional Core Courses	Operating Systems Lab	0	0	4	30	20	50	2
BTCS 405-18	Professional Core Courses	Design & Analysis of Algorithms Lab	0	0	4	30	20	50	2
Total			15	2	10	390	360	750	24

Students will take up summer internship of 4-6 weeks at industry or organizations of repute after 4th sem, that will be accredited in 5th semester.

IK Gujral Punjab Technical University, Kapurthala
B. Tech- Computer Science and Engg. (Data Science)

Fifth Semester

Course Code	Type of Course	Course Title	Hours per Week			Marks Distribution		Total Marks	Credits
			L	T	P	Internal	External		
BTES 501-20	Engineering Science	Statistical Computing Techniques using R	3	0	0	40	60	100	3
BTCS 501-18	Professional Core Courses	Database Management Systems	3	0	0	40	60	100	3
BTCS 502-18	Professional Core Courses	Formal Language & Automata Theory	3	0	0	40	60	100	3
BTAIML 501-20	Professional Core Courses	Programming in Python	3	0	0	40	60	100	3
BTAIML 502-20	Professional Core Courses	Artificial Intelligence	3	0	0	40	60	100	3
BTAIML *****	Professional Elective	Elective-I	3	0	0	40	60	100	3
MC	Mandatory Courses	Constitution of India/ Essence of Indian Traditional Knowledge	2	-	-	100	-	100	S/US
BTES 502-20	Engineering Science	Statistical Computing Techniques using R lab	0	0	2	30	20	50	1
BTCS 505-18	Professional Core Courses	Database Management Systems lab	0	0	2	30	20	50	1
BTAIML 503-20	Professional Core Courses	Programming in Python Lab	0	0	2	30	20	50	1
BTAIML 504-20	Professional Core Courses	Artificial Intelligence Lab	0	0	2	30	20	50	1
BTAIML *****	Professional Elective	Elective-I Lab	0	0	2	30	20	50	1
	Professional Training	Industrial *Training	-	-	-	60	40	100	S/US
Total			20	0	10	460	440	900	23

* 4-6 weeks industrial training undertaken after 4th semester in summer vacations.

BTCS 801-20	Semester Training	300	200	500	16

LIST OF ELECTIVES

Elective I

BTAIML 505-20 Data Visualization using tableau
BTAIML 506-20 Data Visualization using tableau lab
BTAIML 507-20 User Interface development
BTAIML 508-20 User Interface development lab
BTAIML 509-20 Java Programming
BTAIML 510-20 Java Programming lab

Elective II

BTAIML601-20 Graph Theory
BTAIML602-20 Graph Theory Lab
BTAIML605-20 Recommender System
BTAIML606-20 Recommender System Lab
BTDS603-20 Big Data Analytics
BTDS604-20 Big Data Analytics Lab

Elective III

BTDS605-20 No SQL using MongoDB
BTDS606-20 No SQL using MongoDB
BTCS618-18 Machine Learning
BTCS 619-18 Machine Learning Lab
BTAIML701-20 Computer Vision
BTAIML702-20 Computer Vision Lab

Elective IV

BTDS701-20 Social Media Analytics
BTDS702-20 Social Media Analytics lab
BTDS703-20 Sentiment Analysis
BTDS704-20 Sentiment Analysis Lab
BTCS704-18 Deep Learning
BTCS705-18 Deep Learning Lab

Elective V

BTDS705-20 Business Intelligence
BTDS706-20 Business Intelligence lab
BTDS707-20 Interoperable Web Technologies
BTDS708-20 Interoperable Web Technologies Lab
BTDS709-18 Optimization Techniques
BTDS710-18 Optimization Techniques Lab

Third Semester

Course Code: BTCS301-18	Course Title: Data Structure & Algorithms	3L:0T:P	3Credits
--------------------------------	--	----------------	-----------------

Detailed Contents:

Module 1: Introduction

Basic Terminologies: Elementary Data Organizations, Data Structure Operations: insertion, deletion, traversal etc.; Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off.

Searching: Linear Search and Binary Search Techniques and their complexity analysis.

[6 hrs] (CO1)

Module 2: Stacks and Queues

ADT Stack and its operations: Algorithms and their complexity analysis, Applications of Stacks: Expression Conversion and evaluation – corresponding algorithms and complexity analysis. ADT queue, Types of Queue: Simple Queue, Circular Queue, Priority Queue; Operations on each types of Queues: Algorithms and their analysis.

[10 hrs] (CO2, CO4, CO5)

Module 3: Linked Lists

Singly linked lists: Representation in memory, Algorithms of several operations: Traversing, Searching, Insertion into, Deletion from linked list; Linked representation of Stack and Queue, Header nodes, Doubly linked list: operations on it and algorithmic analysis; Circular Linked Lists: All operations their algorithms and the complexity analysis.

Trees: Basic Tree Terminologies, Different types of Trees: Binary Tree, Threaded Binary Tree, Binary Search Tree, AVL Tree; Tree operations on each of the trees and their algorithms with complexity analysis. Applications of Binary Trees. B Tree, B+ Tree: definitions, algorithms and analysis.

[10 hrs] (CO2, CO4, CO5)

Module 4: Sorting and Hashing

Objective and properties of different sorting algorithms: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort; Performance and Comparison among all the methods, Hashing.

[10 hrs] (CO3)

Module 4: Graph

Basic Terminologies and Representations, Graph search and traversal algorithms and complexity analysis.

[6 hrs] (CO2, CO4)

Course Outcomes:

The student will be able to:

1. For a given algorithm student will able to analyze the algorithms to determine the time and computation complexity and justify the correctness;
2. Student will be able to handle operation like searching, insertion, deletion, traversing on various Data Structures and determine time and computational complexity;
3. Student will able to write an algorithm Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort and compare their performance in term of Space and Time complexity;
4. Students will be able to choose appropriate Data Structure as applied to specific problem definition; &

5. Demonstrate the reusability of Data Structures for implementing complex iterative problems.

Suggested Books:

1. “Classic Data Structures”, Samanta and Debasis, 2nd edition, PHI publishers.
2. “Fundamentals of Data Structures”, Illustrated Edition by Ellis Horowitz, SartajSahni, Computer Science Press.
3. “Data Structures with C (Schaum's Outline Series)”, Seymour Lipschutz, 1st edition, McGraw Hill Education.

Reference Books:

1. Algorithms, Data Structures, and Problem Solving with C++”, Illustrated Edition by Mark Allen Weiss, Addison-Wesley Publishing Company.
2. “How to Solve it by Computer”, 2nd Impression by R. G. Dromey, Pearson Education.

Course Code: BTCS302-18	Course Title: Object Oriented Programming	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Pre-requisites: Programming in C

Detailed Contents:

Module 1: Introduction

Overview of C++, Sample C++ program, Different data types, operators, expressions, and statements, arrays and strings, pointers & function components, recursive functions, user - defined types, function overloading, inline functions, Classes & Objects – I: classes, Scope resolution operator, passing objects as arguments, returning objects, and object assignment.

[8 hrs] (CO1)

Module 2: Classes & Objects –II

Constructors, Destructors, friend functions, Parameterized constructors, Static data members, Functions, Arrays of objects, Pointers to objects, this pointer, and reference parameter, Dynamic allocation of objects, Copyconstructors, Operator overloading using friend functions, overloading.

[8 hrs] (CO1, CO2)

Module 3: Inheritance

Base Class, Inheritance and protected members, Protected base class inheritance, Inheriting multiple base classes, Constructors, Destructors and Inheritance, Passing parameters to base class constructors, Granting access, Virtual base classes.

[8 hrs] (CO3, CO4)

Module 4: Virtual functions, Polymorphism

Virtual function, calling a Virtual function through a base class reference, Virtual attribute is inherited, Virtual functions are hierarchical, pure virtual functions, Abstract classes, Using virtual functions, Early and late binding.

[8 hrs] (CO3, CO4)

Module 5: Exception Handling

Basics of exception handling, exception handling mechanism, throwing mechanism, catching mechanism, I/O System Basics, File I/O: Exception handling fundamentals, Exception handling options. C++ stream classes, Formatted I/O, fstream and the File classes, Opening and closing a file, Reading and writing text files.

[10 hrs] (CO5)

Course Outcomes:

The student will be able to:

1. Identify classes, objects, members of a class and the relationships among them needed to solve a specific problem;
2. Demonstrate the concept of constructors and destructors. And create new definitions for some of the operators;
3. Create function templates, overload function templates;
4. Understand and demonstrate the concept of data encapsulation, inheritance, polymorphism with virtual functions; &
5. Demonstrate the concept of file operations, streams in C++ and various I/O manipulators.

Suggested Books:

1. E. Balagurusamy, Object Oriented Programming with C++, Tata McGraw Hill.

Reference Books:

1. Stanley B.Lippmann, JoseeLajoie: C++ Primer, 4th Edition, Addison Wesley, 2012.
2. Herbert Schildt: The Complete Reference C++, 4th Edition, Tata McGraw Hill, 2011.

Course Code: BTCS303-18	Course Title: Data Structure & AlgorithmsLab	0L:0T:4P	2Credits
--------------------------------	---	-----------------	-----------------

List of Experiment:

- Task 1:** Write a program to insert a new element at end as well as at a given position in an array.
- Task 2:** Write a program to delete an element from a given whose value is given or whose position is given.
- Task 3:** Write a program to find the location of a given element using Linear Search.
- Task 4:** Write a program to find the location of a given element using Binary Search.
- Task 5:** Write a program to implement push and pop operations on a stack using linear array.
- Task 6:** Write a program to convert an infix expression to a postfix expression using stacks.
- Task 7:** Write a program to evaluate a postfix expression using stacks.
- Task 8:** Write a recursive function for Tower of Hanoi problem.
- Task 9:** Write a program to implement insertion and deletion operations in a queue using linear array.
- Task 10:** Write a menu driven program to perform following insertion

operations in a single linked list:

- i. Insertion at beginning
- ii. Insertion at end
- iii. Insertion after a given node
- iv. Traversing a linked list

Task 11: Write a menu driven program to perform following deletion operations in a single linked list:

- i. Deletion at beginning
- ii. Deletion at end
- iii. Deletion after a given node

Task 12: Write a program to implement push and pop operations on a stack using linked list.

Task 13: Write a program to implement push and pop operations on a queue using linked list.

Task 14: Program to sort an array of integers in ascending order using bubble sort.

Task 15: Program to sort an array of integers in ascending order using selection sort.

Task 16: Program to sort an array of integers in ascending order using insertion sort.

Task 17: Program to sort an array of integers in ascending order using quick sort.

Task 18: Program to traverse a Binary search tree in Pre-order, In-order and Post-order.

Task 19: Program to traverse graphs using BFS.

Task 20: Program to traverse graphs using DFS.

Lab Outcomes:

The student will be able to:

1. Improve practical skills in designing and implementing basic linear data structure algorithms;
2. Improve practical skills in designing and implementing Non-linear data structure algorithms;
3. Use Linear and Non-Linear data structures to solve relevant problems;
4. Choose appropriate Data Structure as applied to specific problem definition; &
5. Implement Various searching algorithms and become familiar with their design methods.

Reference Books:

1. “Data Structures with C (Schaum's Outline Series)”, Seymour Lipschutz, 1st edition, McGraw Hill Education.

Course Code: BTCS304-18	Course Title: Object Oriented Programming Lab	0L:0T:4P	2Credits
--------------------------------	--	-----------------	-----------------

List of Experiment:

IK Gujral Punjab Technical University, Kapurthala
B. Tech, Computer Science & Engg.

- Task 1:** Write a program that uses a class where the member functions are defined inside a class.
- Task 2:** Write a program that uses a class where the member functions are defined outside a class.
- Task 3:** Write a program to demonstrate the use of static data members.
- Task 4:** Write a program to demonstrate the use of const data members.
- Task 5:** Write a program to demonstrate the use of zero argument and parameterized constructors.
- Task 6:** Write a program to demonstrate the use of dynamic constructor.
- Task 7:** Write a program to demonstrate the use of explicit constructor.
- Task 8:** Write a program to demonstrate the use of initializer list.
- Task 9:** Write a program to demonstrate the overloading of increment and decrement operators.
- Task 10:** Write a program to demonstrate the overloading of memory management operators.
- Task 11:** Write a program to demonstrate the typecasting of basic type to class type.
- Task 12:** Write a program to demonstrate the typecasting of class type to basic type.
- Task 13:** Write a program to demonstrate the typecasting of class type to class type.
- Task 14:** Write a program to demonstrate the multiple inheritances.
- Task 15:** Write a program to demonstrate the runtime polymorphism.
- Task 16:** Write a program to demonstrate the exception handling.
- Task 17:** Write a program to demonstrate the use of class template.
- Task 18:** Write a program to demonstrate the reading and writing of mixed type of data.

Lab Outcomes:

The student will be able to:

1. Develop classes incorporating object-oriented techniques;
2. Design and implement object-oriented concepts of inheritance and polymorphism;
3. Illustrate and implement STL class of containers and need for exceptions to handle errors for object oriented programs; &
4. Design and implement any real world based problem involving GUI interface using object-oriented concepts.

Reference Books:

1. Stanley B.Lippmann, JoseeLajoie: C++ Primer, 4th Edition, Addison Wesley, 2012.
2. E. Balagurusamy, Object Oriented Programming with C++, Tata McGraw Hill.

BTAM302-23	Mathematics-III (Probability and Statistics)	L-4, T-1, P-0	4 Credits
Pre-requisite: Intermediate Calculus and Basic algebra			
Course Objectives: The objective of this course is to familiarize the students with fundamental concepts of theory of probability and statistics. The major focus of the course will be on a systematic mathematical treatment of these concepts and their applications.			
Course Outcomes: At the end of the course, the student will be able to			
CO1	Analyze given data using measures of central tendency, skewness and kurtosis.		
CO2	Understand and deal with randomness occurring in real world phenomena.		
CO3	Apply theoretical discrete and continuous probability distributions to deal with real world problems.		
CO4	Analyze given data using the concepts of correlation and regression and fitting of curves.		
CO5	Analyze hypothesis based on small and large samples using different tests of significance.		

Detailed Content:

Unit I

Measures of Central tendency: Moments, skewness and Kurtosis, Random experiment, Probability axioms, Definition of Probability, conditional probability, Discrete and Continuous random variables, Expectation of Discrete and Continuous random variables.

Unit II

Probability distributions: Binomial, Poisson and Normal, Poisson approximation to the binomial distribution, Evaluation of statistical parameters for these three distributions, Bivariate distributions and their properties.

Unit III

Correlation and regression for bivariate data, Rank correlation. Curve fitting by the method of least squares, fitting of straight lines, second degree parabolas and more general curves.

Unit IV

Test of significances: Sampling and standard error, Tests of significance for large samples and small samples (t-distribution, F-distribution), Chi-square test for goodness of fit and independence of attributes.

Recommended Books:

1. S.P. Gupta, Statistical Methods, Sultan Chand & Sons, 33rd Edition, 2005.
2. S.C. Gupta and V. K. Kapoor, Fundamentals of Mathematical Statistics, Sultan Chand & Sons, 2014.
3. S. Ross, A First Course in Probability, 6th Edition, Pearson Education India, 2002.
4. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
5. Robert V. Hogg, Joseph W. Mckean and Allen T. Craig, Introduction to Mathematical Statistics, 7th Edition, Pearson, 2012.

Development of Societies
Course code: HSMC101-18

Credits: 3

COURSE TOPICS:

2.1 Unit I: Social Development (5 hours)

1. Concepts behind the origin of Family, Clan and Society
2. Different Social Systems
3. Relation between Human being and Society
4. Comparative studies on different models of Social Structures and their evolution

2.2 Unit II: Political Development (3 hours)

1. Ideas of Political Systems as learnt from History
2. Different models of Governing system and their comparative study

2.3 Unit III: Economic Development (18 hours)

1. Birth of Capitalism, Socialism, Marxism
2. Concept of development in pre-British, British and post British period- Barter, Jajmani
3. Idea of development in current context.
4. E. F. Schumacher's idea of development, Buddhist economics. Gandhian idea of development. Swaraj and Decentralization.

3. READINGS

- 3.1 TEXTBOOK:
- 3.2 *REFERENCE BOOKS:

4. OTHER SESSIONS

- 4.1 *TUTORIALS:
- 4.2 *LABORATORY:
- 4.3 *PROJECT: Possible projects in this course could be
 - a) Interact with local communities and understand their issues.
 - b) Study local cottage industry and agricultural practices. Role of engineering and specialized knowledge.
 - c) Evaluation of technology in the context of its application. Social impact of technology. Environmental impact of technology. Evaluation from a holistic perspective.

PHILOSOPHY Course
code: HSMC102-18

Credits: 3

COURSE TOPICS:

2.1 Unit 1:

The difference between knowledge (Vidya) and Ignorance (Avidya):

- a. Upanishads;
- b. Six systems orthodox and Heterodox Schools of Indian Philosophy.
- c. Greek Philosophy:

2.2 Unit 2:

Origin of the Universe:

- NasidiyaSukta: "Who really knows?"
- Brhadaranyaka Upanishad; Chandogya Upanishad: Non-self, Self, real and unreal.
- Taittiriya Upanishad: SikshaValli.
- Plato's Symposium: Lack as the source of desire and knowledge.
- Socratic's method of knowledge as discovery.
- Language: Word as root of knowledge (Bhartrahari's Vakyapadiyam)
- Fourteen Knowledge basis as a sources of Vidya: Four Vedas; Six auxiliary sciences (Vedangas); Purana, Nyaya, Mimamsa and Dharma Sastras.

2.3 Unit 3:

Knowledge as Power: Francis Bacon. Knowledge as both power and self-realization in Bagavad Gita.

2.4 Unit 4:

Knowledge as oppression: M. Foucault. Discrimination between Rtam and Satyam in Indian Philosophy.

2.5 Unit 5:

Knowledge as invention: Modern definition of creativity; scientific activity in the claim that science invents new things at least through technology.

2.6 Unit 6:

Knowledge about the self, transcendental self; knowledge about society, polity and nature.

2.7 Unit 7:

Knowledge about moral and ethics codes.

2.8 Unit 8:

Tools of acquiring knowledge: Tantrayuktis, a system of inquiry (Caraka, Sushruta, Kautilya, Vyasa)

3. READINGS

1. Copleston, Frederick, History of Philosophy, Vol. 1. Great Britain: Continuum.
2. Hiriyanna, M. Outlines of Indian Philosophy, Motilal Banarsidass Publishers; Fifth Reprint edition (2009)
3. Sathaye, Avinash, Translation of Nasadiya Sukta
4. Ralph T. H. Griffith. The Hymns of the R̥gveda. Motilal Banarsidass: Delhi: 1973.
5. Raju, P. T. Structural Depths of Indian Thought, Albany: State University of New York Press.
6. Plato, Symposium, Hamilton Press.
7. Kautilya Artha Sastra. Penguin Books, New Delhi.
8. Bacon, Nova Organum
9. Arnold, Edwin. The Song Celestial.
10. Foucault, Knowledge/Power.
11. Wildon, Anthony, System of Structure.
12. Lele, W.K. The Doctrine of Tantrayukti. Varanasi: Chowkamba Series.
13. Dasgupta, S. N. History of Indian Philosophy, Motilal Banarsidas, Delhi.
14. Passmore, John, Hundred Years of Philosophy, Penguin.

4. OTHER SESSIONS:

4.1 Mode of Conduct

5. ASSESSMENT (indicative only):

Ask students to do term papers, for example, writing biographical details of founders, sustainers, transmitters, modifiers, rewriters; translating monographs of less known philosophers such as K. C. Bhattacharyas, Daya Krishna, Gopinath Bhattacharya; comparative study of philosophical system such as Madhyastha Darshan.

6. OUTCOME OF THE COURSE:

Students will develop strong natural familiarity with humanities along with right understanding enabling them to eliminate conflict and strife in the individual and society. Students shall be able to relate philosophy to literature, culture, society and lived experience can be considered.

Detailed Contents:

Module 1:

NUMBER SYSTEMS: Binary, Octal, Decimal, Hexadecimal. Number base conversions, 1's, 2's complements, signed Binary numbers. Binary Arithmetic, Binary codes: Weighted BCD, Gray code, Excess 3 code, ASCII.

LOGIC GATES: AND, OR, NOT, NAND, NOR, Exclusive-OR and Exclusive-NOR. Implementations of Logic Functions using gates, NAND-NOR implementations.

Module 2 :

BOOLEAN ALGEBRA: Boolean postulates and laws – De-Morgan's Theorem, Principle of Duality, Boolean expression – Boolean function, Minimization of Boolean expressions – Sum of Products (SOP), Product of Sums (POS), Minterm, Maxterm, Canonical forms, Conversion between canonical forms, Karnaugh map Minimization, Don't care conditions, Quine-McCluskey method.

Module 3:

COMBINATIONAL CIRCUITS: Design procedure – Adders, Subtractors, BCD adder, Magnitude Comparator, Multiplexer/Demultiplexer, encoder/decoder, parity checker, code converters. Implementation of combinational logic using MUX, BCD to 7 segment decoder.

SEQUENTIAL CIRCUITS: Flip flops SR, JK, T, D and Master slave, Excitation table, Edge triggering, Level Triggering, Realization of one flip flop using other flip flops. Asynchronous/Ripple counters, Synchronous counters, Modulo-n counter, Ring Counters. Design of Synchronous counters: state diagram, Circuit implementation. Shift registers.

Module 4:

MEMORY DEVICES: Classification of memories, RAM organization, Write operation, Read operation, Memory cycle. ROM organization, PROM, EPROM, EEPROM, Programmable logic array, Programmable array logic, complex Programmable logic devices (CPLDS), Field Programmable Gate Array (FPGA).

A/D & D/A CONVERTORS : Analog & Digital signals. sample and hold circuit, A/D and D/A conversion techniques (Weighted type, R-2R Ladder type, Counter Type, Dual Slope type, Successive Approximation type).

COURSE OUTCOME:At the end of course the student will be able to:

1. Demonstrate the operation of simple digital gates, identify the symbols, develop the truth table for those gates; combine simple gates into more complex circuits; change binary, hexadecimal, octal numbers to their decimal equivalent and vice versa.
2. Demonstrate the operation of a flip-flop. Design counters and clear the concept of shift registers.
3. Study different types of memories and their applications. Convert digital signal into analog and vice versa.

Suggested Readings/ Books:

- Morris Mano, **Digital Design**, Prentice Hall of India Pvt. Ltd
- Donald P. Leach and Albert Paul Malvino, **Digital Principles and Applications**, 5 ed., Tata McGraw Hill Publishing Company Limited, New Delhi, 2003.
- R.P. Jain, **Modern Digital Electronics**, 3 ed., Tata McGraw–Hill publishing company limited, New Delhi, 2003.
- Thomas L. Floyd, **Digital Fundamentals**, Pearson Education, Inc, New Delhi, 2003
- Ronald J. Tocci, Neal S. Widmer, Gregory L. Moss, **Digital System - Principles and Applications**, Pearson Education.
- Ghosal, **Digital Electronics**, Cengage Learning.

Course Code: BTES302-18	Course Title: Digital Electronics Lab	0L:0T:2P	1 Credits
-------------------------	---------------------------------------	----------	-----------

List of Experiments:

1. To verify the Truth-tables of all logic gates.
2. To realize and verify the Half & full adder circuits using logic gates.
3. To realize Half & full subtractor circuits using logic gates.
4. To realize Encoder and Decoder circuits
5. To realize Multiplexer circuits
6. To realize 4-bit binary-gray & gray-binary converters.
7. To realize comparator circuit for two binary numbers of 2-bit each.
8. To realize Full adder & full subtractor circuits using encoder.
9. To design Full adder & full subtractor circuits using multiplexer.
10. To design and verify the Truth tables of all flip-flops.
11. To design Mod-6/Mod-9 synchronous up-down counter.

Course Outcomes

At the end of this course student will demonstrate the ability to:

1. Realize combinational circuits using logic gates.
2. Realize sequential circuits using logic gates.
3. Realize various types of Flip-flops and counters

Fourth Semester

Pre-requisites: Digital Electronics

Detailed Contents:

Module 1: Functional blocks of a computer

CPU, memory, input-output subsystems, control unit. Instruction set architecture of a CPU – registers, instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set. Case study – instruction set of 8085 processor.

Data representation: signed number representation, fixed and floating point representations, character representation. Computer arithmetic – integer addition and subtraction, ripple carry adder, carry look-ahead adder, etc. multiplication – shift-and-add, Booth multiplier, carry save multiplier, etc. Division restoring and non-restoring techniques, floating point arithmetic.

[10 hrs] (CO1, CO2)

Module 2: Introduction to x86 architecture.

CPU control unit design: Hardwired and micro-programmed design approaches, Case study – design of a simple hypothetical CPU.

Memory system design: semiconductor memory technologies, memory organization.

Peripheral devices and their characteristics: Input-output subsystems, I/O device interface, I/O transfers – program controlled, interrupt driven and DMA, privileged and non-privileged instructions, software interrupts and exceptions. Programs and processes –role of interrupts in process state transitions, I/O device interfaces – SCII, USB.

[12 hrs] (CO2, CO4)

Module 3: Pipelining

Basic concepts of pipelining, throughput and speedup, pipeline hazards.

Parallel Processors: Introduction to parallelprocessors, Concurrent access to memory and cache coherency.

[10 hrs] (CO5)

Module 4: Memory Organization

Memory interleaving, concept of hierarchical memory organization, cache memory, cache size vs. block size, mapping functions, replacement algorithms, write policies.

[10 hrs] (CO3)

Course Outcomes:

The student will be able to:

1. Understand functional block diagram of microprocessor;
2. Apply instruction set for Writingassembly language programs;
3. Design a memory module and analyze its operation by interfacing with the CPU;
4. Classify hardwired and microprogrammed control units; &
5. Understand the concept of pipelining and its performance metrics.

Suggested Books:

1. “ComputerOrganization and Architecture”, Moris Mano,
2. “ComputerOrganization and Design: The Hardware/Software Interface”, 5th Edition by David A. Patterson and John L. Hennessy, Elsevier.
3. “Computer Organization and Embedded Systems”, 6th Edition by CarlHamacher, McGraw Hill Higher Education.

Reference Books:

1. “Computer Architecture and Organization”, 3rd Edition by John P. Hayes, WCB/McGraw-Hill
2. “Computer Organization and Architecture: Designing for Performance”, 10th Edition by William Stallings, Pearson Education.
3. “Computer System Design and Architecture”, 2nd Edition by Vincent P. Heuring and Harry F. Jordan, Pearson Education.

Course Code: BTCS402-18	Course Title: Operating Systems	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Detailed Contents:

Module 1: Introduction

Concept of Operating Systems, Generations of Operating systems, Types of Operating Systems, OS Services, System Calls, Structure of an OS - Layered, Monolithic, Microkernel Operating Systems, Concept of Virtual Machine. Case study on UNIX and WINDOWS Operating System.

[6 hrs] (CO1)

Module 2: Processes

Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching

Thread: Definition, Various states, Benefits of threads, Types of threads, Concept of multithreads,

Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time; Scheduling algorithms: Pre-emptive and Non-pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

[10 hrs] (CO2, CO3)

Module 3: Inter-process Communication

Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson’s Solution, The Producer/Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader’s & Writer Problem, Dining Philosopher Problem etc.

[8 hrs] (CO2)

Module 4: Deadlocks

Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker’s algorithm, Deadlock detection and Recovery.

[8 hrs] (CO3)

Module 5: Memory Management

Basic concept, Logical and Physical address map, Memory allocation: Contiguous Memory allocation – Fixed and variable partition – Internal and External fragmentation and Compaction; Paging: Principle of operation – Page allocation – Hardware support for paging, Protection and sharing, Disadvantages of paging.

Virtual Memory: Basics of Virtual Memory – Hardware and control structures – Locality of

reference, Page fault, Working Set, Dirty page/Dirty bit – Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU).

[10 hrs] (CO4)

Module 6: I/O Hardware

I/O devices, Device controllers, Direct memory access Principles of I/O Software: Goals of Interrupt handlers, Device drivers, Device independent I/O software, Secondary-Storage Structure: Disk structure, Disk scheduling algorithms

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free Space Management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance.

Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks.

[8 hrs] (CO5, CO6)

Course Outcomes:

The student will be able to:

1. Explain basic operating system concepts such as overall architecture, system calls, user mode and kernel mode;
2. Distinguish concepts related to processes, threads, process scheduling, race conditions and critical sections;
3. Analyze and apply CPU scheduling algorithms, deadlock detection and prevention algorithms;
4. Examine and categorize various memory management techniques like caching, paging, segmentation, virtual memory, and thrashing;
5. Design and implement file management system; &
6. Appraise high-level operating systems concepts such as file systems, disk-scheduling algorithms and various file systems.

Suggested Books:

1. Operating System Concepts Essentials, 9th Edition by AviSilberschatz, Peter Galvin, Greg Gagne, Wiley Asia Student Edition.
2. Operating Systems: Internals and Design Principles, 5th Edition, William Stallings, Prentice Hall of India.

Reference Books:

1. Operating System: A Design-oriented Approach, 1st Edition by Charles Crowley, Irwin Publishing
2. Operating Systems: A Modern Perspective, 2nd Edition by Gary J. Nutt, Addison-Wesley
3. Design of the Unix Operating Systems, 8th Edition by Maurice Bach, Prentice-Hall of India
4. Understanding the Linux Kernel, 3rd Edition, Daniel P. Bovet, Marco Cesati, O'Reilly and Associates

Pre-requisites: Data Structures

Detailed Contents:

Module 1: Introduction

Characteristics of algorithm. Analysis of algorithm: Asymptotic analysis of complexity bounds – best, average and worst-case behavior; Performance measurements of Algorithm, Time and space trade-offs, Analysis of recursive algorithms through recurrence relations: Substitution method, Recursion tree method and Masters’ theorem.

[8 hrs] (CO1)

Module 2: Fundamental Algorithmic Strategies

Brute-Force, Greedy, Dynamic Programming, Branch- and-Bound and Backtracking methodologies for the design of algorithms; Illustrations of these techniques for Problem-Solving: Bin Packing, Knap Sack, TSP.

[10 hrs] (CO1, CO2)

Module 3: Graph and Tree Algorithms

Traversal algorithms: Depth First Search (DFS) and Breadth First Search (BFS); Shortest path algorithms, Transitive closure, Minimum Spanning Tree, Topological sorting, Network Flow Algorithm.

[10 hrs] (CO3)

Module 4: Tractable and Intractable Problems

Computability of Algorithms, Computability classes – P, NP, NP-complete and NP-hard. Cook’s theorem, Standard NP-complete problems and Reduction techniques.

[8 hrs] (CO5)

Module 5: Advanced Topics

Approximation algorithms, Randomized algorithms, Heuristics and their characteristics.

[6 hrs] (CO1, CO4, CO5)

Course Outcomes:

The student will be able to:

1. For a given algorithms analyze worst-case running times of algorithms based on asymptotic analysis and justify the correctness of algorithms;
2. Explain when an algorithmic design situation calls for which design paradigm (greedy/ divide and conquer/backtrack etc.);
3. Explain model for a given engineering problem, using tree or graph, and write the corresponding algorithm to solve the problems;
4. Demonstrate the ways to analyze approximation/randomized algorithms (expected running time, probability of error); &
5. Examine the necessity for NP class based problems and explain the use of heuristic techniques.

Suggested Books:

1. Introduction to Algorithms, 4TH Edition, Thomas H Cormen, Charles E Lieserson, Ronald L Rivest and Clifford Stein, MIT Press/McGraw-Hill.
2. Data Structures and Algorithms in C++, Weiss, 4th edition, Pearson.
3. Fundamentals of Computer Algorithms – E. Horowitz, Sartaj Saini, Galgota Publications.

Reference Books

1. Algorithm Design, 1stEdition, Jon Kleinberg and ÉvaTardos, Pearson.
 2. Algorithm Design: Foundations, Analysis, and Internet Examples, Second Edition, Michael T Goodrich and Roberto Tamassia, Wiley.
 3. Algorithms -- A Creative Approach, 3RD Edition, UdiManber, Addison-Wesley, Reading, MA.
-

Course Code: BTES402-18	Course Title: Computer Organization & ArchitectureLab	0L:0T:2P	1Credits
--------------------------------	--	-----------------	-----------------

List of Experiment:

- Task 1:** Computer Anatomy- Memory, Ports, Motherboard and add-on cards.
- Task 2:** Dismantling and assembling PC.
- Task 3:** Introduction to 8085 kit.
- Task 4:** 2. Addition of two 8 bit numbers, sum 8 bit.
- Task 5:** Subtraction of two 8 bit numbers.
- Task 6:** Find 1's complement of 8-bit number.
- Task 7:** Find 2's complement of 8-bit number.
- Task 8:** Shift an 8-bit no. by one bit.
- Task 9:** Find Largest of two 8 bit numbers.
- Task 10:** Find Largest among an array of ten numbers (8 bit).
- Task 11:** Sum of series of 8 bit numbers.
- Task 12:** Introduction to 8086 kit.
- Task 13:** Addition and subtraction of two 16 bit numbers, sum 16 bit.
- Task 14:** Implement of Booth's algorithm for arithmetic operations.
- Task 15:** Find 1's and 2's complement of 16-bit number.
- Task 16:** Implement simple programs using I/O based interface.

Lab Outcomes:

The student will be able to:

1. Assemble personal computer;
2. Implement the various assembly language programs for basic arithmetic and logical operations; &
3. Demonstrate the functioning of microprocessor/microcontroller based systems with I/O interface.

Reference Books:

1. Fundamentals of Microprocessors and Microcontrollers by B. Ram, Dhanpat Rai Publications.
-

List of Experiment:

- Task 1:** Installation Process of various operating systems.
- Task 2:** Implementation of CPU scheduling algorithms to find turnaround time and waiting time. a) FCFS b) SJF c) Round Robin (pre-emptive) d) Priority.
- Task 3:** Virtualization, Installation of Virtual Machine Software and installation of Operating System on Virtual Machine.
- Task 4:** Commands for files & directories: cd, ls, cp, md, rm, mkdir, rmdir. Creating and viewing files using cat. File comparisons. Disk related commands: checking disk free spaces. Processes in linux, connecting processes with pipes, background processing, managing multiple processes. Background process: changing process priority, scheduling of processes at command, batch commands, kill, ps, who, sleep. Printing commands, grep, fgrep, find, sort, cal, banner, touch, file. File related commands ws, sat, cut, grep.
- Task 5:** Shell Programming: Basic of shell programming, various types of shell, Shell Programming in bash, conditional & looping statement, case statements, parameter passing and arguments, shell variables, shell keywords, creating shell programs for automate system tasks, report printing.
- Task 6:** Implementation of Bankers algorithm for the purpose of deadlock avoidance.

Lab Outcomes:

The student will be able to:

1. Understand and implement basic services and functionalities of the operating system;
2. Analyze and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority;
3. Implement commands for files and directories;
4. Understand and implement the concepts of shell programming;
5. Simulate file allocation and organization techniques; &
6. Understand the concepts of deadlock in operating systems and implement them in multiprogramming system.

Reference Books:

1. Operating Systems: Design and Implementation, Albert S. Woodhull and Andrew S. Tanenbaum, Pearson Education.

List of Experiment:

- Task 1:** Code and analyze solutions to following problem with given strategies:
- Knap Sack using greedy approach
 - Knap Sack using dynamic approach
- Task 2:** Code and analyze to find an optimal solution to matrix chain multiplication using dynamic programming.
- Task 3:** Code and analyze to find an optimal solution to TSP using dynamic programming.
- Task 4:** Implementing an application of DFS such as:
- to find the topological sort of a directed acyclic graph
 - to find a path from source to goal in a maze.
- Task 5:** Implement an application of BFS such as:
- to find connected components of an undirected graph
 - to check whether a given graph is bipartite.
- Task 6:** Code and analyze to find shortest paths in a graph with positive edge weights using Dijkstra's algorithm.
- Task 7:** Code and analyze to find shortest paths in a graph with arbitrary edge weights using Bellman-Ford algorithm.
- Task 8:** Code and analyze to find shortest paths in a graph with arbitrary edge weights using Flyods' algorithm.
- Task 9:** Code and analyze to find the minimum spanning tree in a weighted, undirected graph using Prims' algorithm
- Task 10:** Code and analyze to find the minimum spanning tree in a weighted, undirected graph using Kruskals' algorithm.
- Task 11:** Coding any real world problem or TSP algorithm using any heuristic technique.

Lab Outcomes:

The student will be able to:

1. Improve practical skills in designing and implementing complex problems with different techniques;
2. Understand comparative performance of strategies and hence choose appropriate, to apply to specific problem definition;
3. Implement Various tree and graph based algorithms and become familiar with their design methods; &
4. Design and Implement heuristics for real world problems.

Reference Books

1. Data Structures and Algorithms in C++, Weiss, 4th edition, Pearson
2. Data Structures and Algorithms using Python and C++, David M. Reed and John Zelle, 2009 edition (available as e book), Franklin Beedle& Associates.

UNIVERSAL HUMAN VALUES 2: UNDERSTANDING HARMONY

Course code: HSMC122-18

Credits: 3

COURSE TOPICS:

The course has 28 lectures and 14 practice sessions in 5 modules:

Module 1: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

1. Purpose and motivation for the course, recapitulation from Universal Human Values-I
2. Self-Exploration—what is it? - Its content and process; ‘Natural Acceptance’ and Experiential Validation- as the process for self-exploration.
3. Continuous Happiness and Prosperity- A look at basic Human Aspirations
4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority
5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario.
6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

Module 2: Understanding Harmony in the Human Being - Harmony in Myself!

7. Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’
8. Understanding the needs of Self (‘I’) and ‘Body’ - happiness and physical facility
9. Understanding the Body as an instrument of ‘I’ (I being the doer, seer and enjoyer)
10. Understanding the characteristics and activities of ‘I’ and harmony in ‘I’
11. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail
12. Programs to ensure Sanyam and Health.

Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one’s own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease.

Module 3: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

13. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship.
14. Understanding the meaning of Trust; Difference between intention and competence
15. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.
16. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.
17. Visualizing a universal harmonious order in society- Undivided Society,

Universal Order- from family to world family.

Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

Module 4: Understanding Harmony in the Nature and Existence - Whole existence as Coexistence

18. Understanding the harmony in the Nature

19. Interconnectedness and mutual fulfilment among the four orders of nature - recyclability and self-regulation in nature

20. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space

21. Holistic perception of harmony at all levels of existence.

Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

Module 5: Implications of the above Holistic Understanding of Harmony on Professional Ethics

22. Natural acceptance of human values

23. Definitiveness of Ethical Human Conduct

24. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order

25. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of peoplefriendly and eco -friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems.

26. Case studies of typical holistic technologies, management models and production systems.

27. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations.

28. Sum up.

Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions eg. to discuss the conduct as an engineer or scientist etc.

3. READINGS:

3.1 Text Book

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010.

3.2 Reference Books

1. Jeevan Vidya: EkParichaya, A. Nagaraj, Jeevan VidyaPrakashan, Amarkantak, 1999.

2. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.

3. The Story of Stuff (Book).

4. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi

5. Small is Beautiful - E. F Schumacher.

6. Slow is Beautiful - Cecile Andrews
7. Economy of Permanence - J CKumarappa
8. Bharat Mein Angreji Raj -PanditSunderlal
9. Rediscovering India - by Dharampal
10. Hind Swaraj or Indian Home Rule - by Mohandas K. Gandhi
11. India Wins Freedom - Maulana Abdul Kalam Azad
12. Vivekananda - Romain Rolland (English)
13. Gandhi - Romain Rolland (English)

OUTCOME OF THE COURSE:

By the end of the course, students are expected to become more aware of themselves, and their surroundings (family, society, nature); they would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they have understood (human values, human relationship and human society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

This is only an introductory foundational input. It would be desirable to follow it up by

- a) Faculty -student or mentor-mentee programs throughout their time with the institution.
- b) Higher level courses on human values in every aspect of living. E.g. as a professional.

Course Code: EVS101-18	Course Title: Environmental Studies-	L:2; T:0; P:0	0Credits
------------------------	--------------------------------------	------------------	----------

.Detailed Contents

Module 1 : Natural Resources :Renewable and non-renewable resources

Natural resources and associated problems.

- a) Forest resources : Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people.
- b) Water resources : Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
- c) Mineral resources : Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
- d) Food resources : World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
- e) Energy resources : Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.
- f) Land resources : Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.
-

Module 2 : Ecosystems

Concept of an ecosystem. Structure and function of an ecosystem.

Food chains, food webs and ecological pyramids. Introduction, types, characteristic features,

structure and function of following ecosystems:

- a. Forest ecosystem
- b. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Module 3 : Biodiversity and its conservation

- Introduction – Definition : genetic, species and ecosystem diversity.
- Biodiversity at global, National and local levels.
- India as a mega-diversity nation
- Hot-spots of biodiversity.
- Threats to biodiversity : habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India
-

Module 4 : Social Issues and the Environment

- From Unsustainable to Sustainable development
- Resettlement and rehabilitation of people; its problems and concerns.
- Environmental ethics : Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, Nuclear accidents and holocaust. Case Studies.
- Public awareness.

***ACTIVITIES**

Nature club (bird watching, recognizing plants at institute/at home, recognizing local animals, appreciating biodiversity)

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.

Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants, mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.

Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

1(A) Awareness Activities:

- a) Small group meetings about water management, promotion of recycle use, generation of less waste, avoiding electricity waste
- b) Slogan making event
- c) Poster making event
- d) Cycle rally
- e) Lectures from experts
- f) Plantation
- g) Gifting a tree to see its full growth
- h) Cleanliness drive
- i) Drive for segregation of waste
- i) To live with some eminent environmentalist for a week or so to understand his work
- vi) To work in kitchen garden for mess
- j) To know about the different varieties of plants
- k) Shutting down the fans and ACs of the campus for an hour or so
- l) Visit to a local area to document environmental assets
river/forest/grassland/hill/mountain/lake/Estuary/Wetlands

- m) Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- n) Visit to a Wildlife sanctuary, National Park or Biosphere Reserve

Course Code: HSMC101-18	Course Title: Development of Societies	3L:0T:0P	3Credits
--------------------------------	---	-----------------	-----------------

Detailed Contents:

Unit I: Social Development

(5 hours)

1. Concepts behind the origin of Family, Clan and Society
2. Different Social Systems
3. Relation between Human being and Society
4. Comparative studies on different models of Social Structures and their evolution

Unit II: Political Development

(3 hours)

1. Ideas of Political Systems as learnt from History
2. Different models of Governing system and their comparative study

Unit III: Economic Development

(18 hours)

1. Birth of Capitalism, Socialism, Marxism
2. Concept of development in pre-British, British and post British period- Barter, Jajmani
3. Idea of development in current context.
4. E. F. Schumacher's idea of development, Buddhist economics. Gandhian idea of development. Swaraj and Decentralization.

PROJECT: Possible projects in this course could be

- a) Interact with local communities and understand their issues.
- b) Study local cottage industry and agricultural practices. Role of engineering and specialized knowledge.
- c) Evaluation of technology in the context of its application. Social impact of technology. Environmental impact of technology. Evaluation from a holistic perspective.

Course Code: HSMC102-18	Course Title: PHILOSOPHY	3L:0T:0P	3Credits
--------------------------------	---------------------------------	-----------------	-----------------

Detailed Contents:

Unit 1:

The difference between knowledge (Vidya) and Ignorance (Avidya):

- a. Upanishads;
- b. Six systems orthodox and Heterodox Schools of Indian Philosophy.
- c. Greek Philosophy:

Unit 2:

Origin of the Universe:

- NasidiyaSukta: "Who really knows?"
- Brhadaranyaka Upanishad; Chandogya Upanishad: Non-self, Self, real and unreal.
- Taittiriya Upanishad: SikshaValli.
- Plato's Symposium: Lack as the source of desire and knowledge.
- Socratic's method of knowledge as discovery.
- Language: Word as root of knowledge (Bhartrahari'sVakyapadiyam)
- Fourteen Knowledge basis as a sources of Vidya: Four Vedas; Six auxiliary sciences (Vedangas); Purana, Nyaya, Mimamsa and Dharma Sastras.

Unit 3:

Knowledge as Power: Francis Bacon. Knowledge as both power and self-realization in Bagavad Gita.

Unit 4:

Knowledge as oppression: M. Foucault. Discrimination between Rtam and Satyam in Indian Philosophy.

Unit 5:

Knowledge as invention: Modern definition of creativity; scientific activity in the claim that science invents new things at least through technology.

Unit 6:

Knowledge about the self, transcendental self; knowledge about society, polity and nature.

Unit 7:

Knowledge about moral and ethics codes.

Unit 8:

Tools of acquiring knowledge: Tantrayuktis, a system of inquiry (Caraka, Sushruta, Kautilya, Vyasa)

10. Foucault, Knowledge/Power.
11. Wildon, Anthony, System of Structure.
12. Lele, W.K. The Doctrine of Tantrayukti. Varanasi: Chowkamba Series.
13. Dasgupta, S. N. History of Indian Philosophy, MotilalBanarsidas, Delhi.

14. Passmore, John, Hundred Years of Philosophy, Penguin.

ASSESSMENT (indicative only):

Ask students to do term papers, for example, writing biographical details of founders, sustainers, transmitters, modifiers, rewriters; translating monographs of less known philosophers such as K. C. Bhattacharyas, Daya Krishna, Gopinath Bhattacharya; comparative study of philosophical system such as MadhyasthaDarshan.

OUTCOME OF THE COURSE:

Students will develop strong natural familiarity with humanities along with right understanding enabling them to eliminate conflict and strife in the individual and society. Students shall be able to relate philosophy to literature, culture, society and lived experience can be considered.

BTCS401-18	Discrete Mathematics	3L:1T:0P	4 Credits
-------------------	-----------------------------	-----------------	------------------

Detailed contents:

Module 1:

Sets, Relation and Function: Operations and Laws of Sets, Cartesian Products, Binary Relation, Partial Ordering Relation, Equivalence Relation, Image of a Set, Sum and Product of Functions, Bijective functions, Inverse and Composite Function, Size of a Set, Finite and infinite Sets, Countable and uncountable Sets, Cantor's diagonal argument and The Power Set theorem, Schroeder-Bernstein theorem.

Principles of Mathematical Induction: The Well-Ordering Principle, Recursive definition, The Division algorithm: Prime Numbers, The Greatest Common Divisor: Euclidean Algorithm, The Fundamental Theorem of Arithmetic. CO1, CO2

Module 2:

Basic counting techniques-inclusion and exclusion, pigeon-hole principle, permutation and combination. CO3

Module 3:

Propositional Logic: Syntax, Semantics, Validity and Satisfiability, Basic Connectives and Truth Tables, Logical Equivalence: The Laws of Logic, Logical Implication, Rules of Inference, The use of Quantifiers. **Proof Techniques:** Some Terminology, Proof Methods and Strategies, Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. CO3, CO4

Module 4:

Algebraic Structures and Morphism: Algebraic Structures with one Binary Operation, Semi Groups, Monoids, Groups, Congruence Relation and Quotient Structures, Free and Cyclic Monoids and Groups, Permutation Groups, Substructures, Normal Subgroups, Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields. Boolean Algebra and Boolean Ring, Identities of Boolean Algebra, Duality, Representation of Boolean Function, Disjunctive and Conjunctive Normal Form CO4

Module 5:

Graphs and Trees: Graphs and their properties, Degree, Connectivity, Path, Cycle, Sub Graph, Isomorphism, Eulerian and Hamiltonian Walks, Graph Colouring, Colouring maps and Planar Graphs, Colouring Vertices, Colouring Edges, List Colouring, Perfect Graph, definition properties and Example, rooted trees, trees and sorting, weighted trees and prefix codes, Bi-connected component and Articulation Points, Shortest distances. CO5

Suggested books:

1. Kenneth H. Rosen, Discrete Mathematics and its Applications, Tata McGraw – Hill
2. Susanna S. Epp, Discrete Mathematics with Applications, 4th edition, Wadsworth Publishing Co. Inc.
3. C L Liu and D P Mohapatra, Elements of Discrete Mathematics A Computer Oriented Approach, 3rd Edition by, Tata McGraw – Hill.

Suggested reference books:

1. J.P. Tremblay and R. Manohar, Discrete Mathematical Structure and Its Application to Computer Science”, TMG Edition, TataMcgraw-Hill
2. Norman L. Biggs, Discrete Mathematics, 2nd Edition, Oxford University Press. Schaum’s Outlines Series, Seymour Lipschutz, Marc Lipson,
3. Discrete Mathematics, Tata McGraw - Hill

Course Outcomes

1. To be able to express logical sentence in terms of predicates, quantifiers, and logical connectives
 2. To derive the solution for a given problem using deductive logic and prove the solution based on logical inference
 3. For a given a mathematical problem, classify its algebraic structure
 4. To evaluate Boolean functions and simplify expressions using the properties of Boolean algebra
 5. To develop the given problem as graph networks and solve with techniques of graph theory.
- ----

Fifth Semester

Course Code: BTES 501-20	Course Title: Statistical Computing Techniques using R	3L:0T:0P	3 Credits
--------------------------	---	----------	-----------

Course Contents:

UNIT 1: **CO1, CO2 [8 Hrs.]**

General introduction to computing, Using R as a calculator, Numbers, words and logicals; missing values (NA), Vectors and their attributes (names, length, type), System- and user-defined objects, Accessing data (data()). Data in the system and data outside the system (read.table, scan)

UNIT 2: **CO1, CO2 [10 Hrs.]**

First steps in graphics, The basics of R syntax, The R workspace, Matrices and lists, Subsetting System-defined functions; the help system, Errors and warnings; coherence of the workspace Data input and output; interface with other software packages, Writing your own code; R script Good programming practice, R syntax -- further steps The parentheses and brackets; =, == and <-

Apply-type functions Compiling and applying functions Documentation, Conditional statements Loops and iterations

UNIT 3: **CO1, CO2 [8 Hrs.]**

Exploratory data analysis, Range, summary, mean, variance, median, sd, histogram, box plot, scatterplot

Probability distributions, Random number generation Distributions, the practice of simulation.

UNIT 4: **CO1, CO2, CO3 [8 Hrs.]**

Statistical functions in R, Statistical inference, contingency tables, chi-square goodness of fit, regression, generalized linear models, advanced modelling methods, the bootstrap method to compute s.e.f

UNIT 5: **CO1, CO3 [8 Hrs.]**

Graphics; beyond the basics Graphics and tables, Working with larger datasets, Principles of exploratory data analysis (big data analysis)

Dataframes in R, Defining your own classes and operations Models and methods in R, Customising the user's environment

Reference Books:

1. Matloff, N. (2011). The Art of R Programming: A Tour of Statistical Software Design, William
2. Philip H. Pollock (2014). An R Companion to Political Analysis, CQ Press
3. Chihara, L. and Hesterberg, T. (2011), Mathematical statistics with resampling and R, Wiley
4. Lander, J. P. (2014) R for Everyone: Advanced Analytics and Graphics, Addison-Wesley Data & Analytics Series

Course Outcomes:

At the end of the course, students will have learned:

CO1: To use a fundamental tool for computing in the practice of quantitative analytical methods (the ‘paper-and-pencil’ tool of the 21st century), that can work for the small jobs (like a pocket calculator) as well as for the big jobs (complex statistical data analysis).

CO2: Programming, data handling, transformations, subsetting, exploratory data analysis, probability distributions and simulations, regression and linear models, summarising data, how to handle large data sets, effective graphics.

CO3: Modern concepts of statistics based on simulations and writing a report of a quantitative analysis.

Course Code: BTES 502-20	Course Title: Statistical Computing Techniques using R lab	0L:0T:2P	1 Credits
--------------------------	--	----------	-----------

Details of Experiments

1. Familiarization of environments in R.
2. Perform simple arithmetic’s using R.
3. Perform basic R functions.
4. Use various graphical techniques in EDA.
5. Create different charts for visualization of given set of data.
6. Find the mean, median, standard deviation and quartiles of a set of observations.
7. Find the Skewness and Kurtosis of a given dataset distribution.
8. Given the scenario, implement the Bayes rule by finding the posterior probability.
9. Find the mass function of a binomial distribution with $n=20, p=0.4$. Also draw the graphs of the mass function and cumulative distribution function.
10. Generate and draw the cdf and pdf of a normal distribution with mean=10 and standard deviation=3. Use values of x from 0 to 20 in intervals of 1.
11. Construct a scatter plot to investigate the relationship between two variables.
12. Perform the Z- test for single proportion, single mean etc.
13. Calculate the regression coefficient and obtain the lines of regression for the given data.
14. Compute confidence intervals for the mean when the standard deviation is known.
15. Perform F test
16. Perform Chi-Square test.

Course Outcomes:

The Students will try to Learn:

CO1. Data manipulation, plot the graphs and charts with the help of computing features in R Programming.

CO2. The given data Interpretation with different distribution functions

CO3. The relevance and importance of the theory in solving practical problems in the real world

.....

Course Code: BTCS501-18	Course Title: Database Management Systems	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Detailed Contents:

Module 1: Database system architecture

Data Abstraction, Data Independence, Data Definition Language (DDL), Data Manipulation Language (DML). Data models: Entity-relationship model, network model, relational and object oriented Data models, integrity constraints, data manipulation operations.

[7hrs] (CO1,2)

Module 2: Relational query languages

Relational algebra, Tuple and domain relational calculus, SQL3, DDL and DML constructs, Open source and Commercial DBMS - MYSQL, ORACLE, DB2, SQL server. Relational database design: Domain and data dependency, Armstrong's axioms, Normal forms, Dependency preservation, Lossless design. Query processing and optimization: Evaluation of relational algebra expressions, Query equivalence, Join strategies, Query optimization algorithms.

[10hrs] (CO2,4)

Module 3:

Storage strategies, Indices, B-trees, hashing.

[3hrs] (CO3)

Module 4: Transaction processing

Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery.

[6hrs] (CO3)

Module 5: Database Security

Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

[8hrs] (CO 4,5)

Module 6: Advanced Topics

Object oriented and object relational databases, Logical databases, Web databases, Distributed databases.

Course Outcomes:

At the end of study, the student shall be able to:

CO1: write relational algebra expressions for a query and optimize the Developed expressions

CO2: design the databases using ER method and normalization.

CO3: construct the SQL queries for Open source and Commercial DBMS-MYSQL, ORACLE, and DB2.

CO4: determine the transaction atomicity, consistency, isolation, and durability.

CO5: Implement the isolation property, including locking, time stamping based on concurrency control and Serializability of scheduling.

Text Books:

1. “Database System Concepts”, 6th Edition by Abraham Silberschatz, Henry F. Korth, S. Sudarshan, McGraw-Hill.

Reference Books:

1. “Principles of Database and Knowledge–Base Systems”, Voll by J. D. Ullman, Computer Science Press.
 2. “Fundamentals of Database Systems”, 5th Edition by R. Elmasri and S. Navathe, Pearson Education.
 3. “Foundations of Databases”, Reprint by Serge Abiteboul, Richard Hull, Victor Vianu, Addison-Wesley.
-

Course Code: BTCS505-18	Course Title: Database management System lab	OL:0T:2P	1Credits
--------------------------------	---	-----------------	-----------------

List of Experiments:

Task 1: Introduction to SQL and installation of SQL Server / Oracle.

Task 2: Data Types, Creating Tables, Retrieval of Rows using Select Statement, Conditional Retrieval of Rows, Alter and Drop Statements.

Task 3: Working with Null Values, Matching a Pattern from a Table, Ordering the Result of a Query, Aggregate Functions, Grouping the Result of a Query, Update and Delete Statements.

Task 4: Set Operators, Nested Queries, Joins, Sequences.

Task 5: Views, Indexes, Database Security and Privileges: Grant and Revoke Commands, Commit and Rollback Commands.

Task 6: PL/SQL Architecture, Assignments and Expressions, Writing PL/SQL Code, Referencing Non-SQL parameters.

Task 7: Stored Procedures and Exception Handling.

Task 8: Triggers and Cursor Management in PL/SQL.

Course Outcomes:

CO1: This practical will enable students to retrieve data from relational databases using SQL.

CO2: students will be able to implement generation of tables using datatypes

CO3: Students will be able to design and execute the various data manipulation queries.

CO4: Students will also learn to execute triggers, cursors, stored procedures etc.

Course Code: BTCS502-18	Course Title: Formal Language & Automata Theory	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Detailed Contents

Module 1: Introduction

Alphabet, languages and grammars, productions and derivation, Chomsky hierarchy of languages.

[3hrs] (CO1)

Module 2: Regular languages and finite automata:

Regular expressions and languages, deterministic finite automata (DFA) and equivalence with regular expressions, nondeterministic finite automata (NFA) and equivalence with DFA, regular grammars and equivalence with finite automata, properties of regular languages, pumping lemma for regular languages, minimization of finite automata.

[8hrs] (CO2)

Module 3: Context-free languages and pushdown automata

Context-free grammars (CFG) and languages (CFL), Chomsky and Greibach normal forms, nondeterministic pushdown automata (PDA) and equivalence with CFG, parse trees, ambiguity in CFG, pumping lemma for context-free languages, deterministic pushdown automata, closure properties of CFLs.

[8hrs] (CO3)

Module 4: Context-sensitive languages

Context-sensitive grammars (CSG) and languages, linear bounded automata and equivalence with CSG.

[5hrs] (CO4)

Module 5: Turing machines

The basic model for Turing machines (TM), Turing recognizable (recursively enumerable) and Turing-decidable (recursive) languages and their closure properties, variants of Turing machines, nondeterministic TMs and equivalence with deterministic TMs, unrestricted grammars and equivalence with Turing machines, TMs as enumerators.

[8hrs] (CO5)

Module 6: Undecidability & Intractability:

Church-Turing thesis, universal Turing machine, the universal and diagonalization languages, reduction between languages and Rice's theorem, undecidable problems about languages.

Intractability: Notion of tractability/feasibility. The classes NP and co-NP, their importance. Polynomial time many-one reduction. Completeness under this reduction. Cook-Levin theorem: NP-completeness of propositional satisfiability, other variants of satisfiability. NP-complete problems from other domains: graphs (clique, vertex cover, independent sets, Hamiltonian cycle), number problem (partition), set cover

[12hrs] (CO5)

Course Outcomes: The student will be able to:

CO1: Write a formal notation for strings, languages and machines.

CO2: Design finite automata to accept a set of strings of a language.

CO3: Design context free grammars to generate strings of context free language.

CO4: Determine equivalence of languages accepted by Push Down Automata and languages generated by context free grammars

CO5: Distinguish between computability and non-computability and Decidability and undecidability.

Text Books:

1. John E. Hopcroft, Rajeev Motwani and Jeffrey D. Ullman, Introduction to Automata Theory, Languages, and Computation, Pearson Education Asia.

Reference Books:

1. Harry R. Lewis and Christos H. Papadimitriou, Elements of the Theory of Computation, Pearson Education Asia.
2. Dexter C. Kozen, Automata and Computability, Undergraduate Texts in Computer Science, Springer.
3. Michael Sipser, Introduction to the Theory of Computation, PWS Publishing.
4. John Martin, Introduction to Languages and The Theory of Computation, Tata McGraw Hill.

Course Code: BTAIML 502-20	Course Title : Artificial Intelligence	3L:0T:0P	3 Credits
-----------------------------------	---	-----------------	------------------

Detailed Contents:

UNIT 1: Introduction: AI problems, Agents and Environments, Structure of Agents, Problem Solving Agents Basic Search Strategies: Problem Spaces, Uninformed Search (Breadth-First, Depth-First Search, Depth-first with Iterative Deepening), Heuristic Search (Hill Climbing, Generic Best-First, A*), Constraint Satisfaction (Backtracking, Local Search)

[8hrs] (CO 1)

UNIT 2: Advanced Search: Constructing Search Trees, Stochastic Search, A* Search Implementation, Minimax Search, Alpha-Beta Pruning Basic Knowledge Representation and Reasoning: Propositional Logic, First-Order Logic, Forward Chaining and Backward Chaining, Introduction to Probabilistic Reasoning, Bayes Theorem

[6hrs] (CO 2)

UNIT 3: Advanced Knowledge Representation and Reasoning: Knowledge Representation Issues, Nonmonotonic Reasoning, Other Knowledge Representation Schemes Reasoning Under Uncertainty: Basic probability, Acting Under Uncertainty, Bayes' Rule, Representing Knowledge in an Uncertain Domain, Bayesian Networks

[6hrs] (CO 3)

UNIT 4: Learning: What Is Learning? Rote Learning, Learning by Taking Advice, Learning in Problem Solving, Learning from Examples, Winston's Learning Program, Decision Trees.

[6hrs]
(CO 4)

UNIT 5: Expert Systems: Representing and Using Domain Knowledge, Shell, Explanation, Knowledge Acquisition.

[6hrs] (CO 5)

Course Outcomes:

At the end of the course the student should be able to:

CO 1: Understand different types of AI agents.

CO 2: Develop different types of various AI search algorithms.

CO 3: Construct simple knowledge-based systems and to apply knowledge representation.

CO 4: Convert intermediate representation in contest to understand learning.

CO 5: Apply for various techniques for Expert Systems.

Text Book:

1. Russell, S. and Norvig, P, Artificial Intelligence: A Modern Approach, Third Edition, PrenticeHall, 2010.

Reference Books:

1. Artificial Intelligence, Elaine Rich, Kevin Knight, Shivasankar B. Nair, The McGraw Hill publications, Third Edition, 2009.
2. George F. Luger, Artificial Intelligence: Structures and Strategies for Complex Problem Solving, Pearson Education, 6th ed., 2009.

Course Code: BTAIML504-20	Course Title Artificial Intelligence Lab	L:0;T:0;P:2	1 Credits
-------------------------------------	---	--------------------	------------------

Detailed List of Tasks:

1. Write a programme to conduct uninformed and informed search.
2. Write a programme to conduct game search.
3. Write a programme to construct a Bayesian network from given data.
4. Write a programme to infer from the Bayesian network.
5. Write a programme to run value and policy iteration in a grid world.
6. Write a programme to do reinforcement learning in a grid world

Lab Outcomes: At the end of the course, the students are able to:

1. Explain artificial intelligence, its characteristics and its application areas.
2. Formulate real-world problems as state space problems, optimization problems or constraint satisfaction problems.
3. Select and apply appropriate algorithms and AI techniques to solve complex problems.
4. Design and develop an expert system by using appropriate tools and techniques.

.....

Course Code: BTAIML501-20	Course Title: Programming in Python	3L:0T:0P	3 Credits	42 Hours
----------------------------------	--	-----------------	------------------	-----------------

Detailed Contents:

Module 1:

Introduction to Python Programming Language: Programming Language, History and Origin of Python Language, Features of Python, Limitations, Major Applications of Python, Getting, Installing Python, Setting up Path and Environment Variables, Running Python, First Python Program, Python Interactive Help Feature, Python differences from other languages.

Python Data Types & Input/Output: Keywords, Identifiers, Python Statement, Indentation, Documentation, Variables, Multiple Assignment, Understanding Data Type, Data Type Conversion, Python Input and Output Functions, Import command.

Operators and Expressions: Operators in Python, Expressions, Precedence, Associativity of Operators, Non Associative Operators.

[8hrs] (CO1)

Module 2:

Control Structures: Decision making statements, Python loops, Python control statements (break and continue), Asserts.

Python Native Data Types: Numbers, Lists, Tuples, Sets, Dictionary, Functions & Methods of Dictionary, Strings (in detail with their methods and operations).

[10hrs] (CO1, 3)

Module 3:

Python Functions: Functions, Advantages of Functions, Built-in Functions, User defined functions, Anonymous functions, Pass by value Vs. Pass by Reference, Recursion, Scope and Lifetime of Variables.

Python Modules: Module definition, Need of modules, Creating a module, Importing module, Path Searching of a Module, Module Reloading, Standard Modules, Python Packages.

[8hrs] (CO 1, 2,3)

Module 4:

Exception Handling: Exceptions, Built-in exceptions, Exception handling, User defined exceptions in Python.

File Management in Python: Operations on files (opening, modes, attributes, encoding, closing), read() & write() methods, tell() & seek() methods, renaming & deleting files in Python, directories in Python.

Classes and Objects: The concept of OOPS in Python, Designing classes, Creating objects, Accessing attributes, Editing class attributes, Built-in class attributes, Garbage collection, Destroying objects.

[10hrs] (CO 2, 4)

Module 5:

Generators and Iterators: Iterators, Generators, any and all functions, with statement, data compression.

Collections: namedtuple(), deque, ChainMap, Counter, OrderedDict, DefaultDict, UserDict, UserList, UserString

Python Date and Time.

[6 hrs] (CO5)

Text Books:

1. Python programming: using problem solving approach, Reema Thareja, Oxford University Press.
2. Programming in Python, Pooja Sharma, BPB Publications.

Course Outcomes:

The students should be able to:

CO1: Examine Python syntax and semantics and be fluent in the use of Python flow control and functions.

CO2: Demonstrate proficiency in handling Strings, Exceptions, and File Systems.

CO3: Create, run and manipulate Python Programs using core data structures like Lists, Dictionaries.

CO4: Interpret the concepts of Object-Oriented Programming as used in Python.

CO5: Implement exemplary applications using date and time, generators, iterators, and collections in Python.

Course Code: BTAIML503-20	Course Title: Programming in Python Lab	0L:0T:2P	1 Credits
----------------------------------	--	-----------------	------------------

Prerequisites: Students should install Python.

List of Experiments:

- Task 1:** Write a program to demonstrate different number data types in Python.
 - Task 2:** Write a program to perform different Arithmetic Operations on numbers in Python.
 - Task 3:** Write a program to create, concatenate and print a string and accessing sub-string from a given string.
 - Task 4:** Write a python script to print the current date in the following format “Sun May 29 02:26:23 IST 2017”
 - Task 5:** Write a program to create, append, and remove lists in python.
 - Task 6:** Write a program to demonstrate working with tuples in python.
 - Task 7:** Write a program to demonstrate working with dictionaries in python.
 - Task 8:** Write a python program to find largest of three numbers.
 - Task 9:** Write a Python program to convert temperatures to and from Celsius, Fahrenheit.
[Formula: $c/5 = f-32/9$]
 - Task 10:** Write a Python program to construct the following pattern, using a nested for loop

```
*
 *
 * *
 * * *
 * * * *
 * * *
 * *
 *
 *
```
 - Task 11:** Write a Python script that prints prime numbers less than 20.
 - Task 12:** Write a python program to find factorial of a number using Recursion.
 - Task 13:** Write a program that accepts the lengths of three sides of a triangle as inputs. The program output should indicate whether or not the triangle is a right triangle (Recall from the Pythagorean Theorem that in a right triangle, the square of one side equals the sum of the squares of the other two sides).
 - Task 14:** Write a python program to define a module to find Fibonacci Numbers and import the module to another program.
 - Task 15:** Write a python program to define a module and import a specific function in that module to another program.
 - Task 16:** Write a script named copyfile.py. This script should prompt the user for the names of two text files. The contents of the first file should be input and written to the second file.
 - Task 17:** Write a program that inputs a text file. The program should print all of the unique words in the file in alphabetical order.
 - Task 18:** Write a Python class to convert an integer to a roman numeral.
 - Task 19:** Write a Python class to implement $\text{pow}(x, n)$
 - Task 20:** Write a Python class to reverse a string word by word.
-

ELECTIVE-I

BTAIML 505-20	Data Visualization Using Tableau	3L:0T:0P	3 Credits
---------------	----------------------------------	----------	-----------

Detailed contents:

UNIT 1 INTRODUCTION TO DATA VISUALIZATION AND TABLEAU:

Acquiring and Visualizing Data, Applications of Data Visualization, Key Factors of Data Visualization. Introduction to Tableau Connecting to Data in Tableau, Shaping Data for Use with Tableau, Tableau Terminology, Views of data and records, Measure, Dimension, Discrete and Continuous.

(9 hrs., CO1)

UNIT 2 CREATION OF CHARTS IN TABLEAU:

Creation of bar charts in Tableau, Aggregation, Line Graphs, Independent Axes, Date Hierarchies, Marks Cards, Encoding, Level of Detail, Filters, Calculated fields, Table Calculations: - Parameters, Level of detail expressions, Dashboards and distribution.

(10 hrs, CO2)

UNIT 3 CHART TYPES:

Spreadsheet – Highlight table, Heat Map, Dual-Axis Combination Chart, Scatter Plot, Tree Map, Spark lines, Small Multiples, Bullet graphs, Stacked area, Histogram, Box and Whisker Plot, Symbol Map, Mapbox , Filled Map , Dual axis Map, Sequential Map , Polygon Maps, Gant Chart , Waterfall Chart, Dual, Axis Slope Graphs , Donut Chart , Funnel Chart, Pace chart ,Pareto Chart , Control Chart , Dynamic Dual-Axis Bump Chart ,dumbbell Chart .

(10 hrs, CO3)

UNIT 4 DATA CONNECTIVITY, TRENDS AND FORECASTING:

Data Joins, updates, exits, updating charts, Icon-Based Navigation, Filters – Analysis using Parameters , Adding alerts to dashboards, Methodology Using Custom Shape Palettes , Tableau Data Visualization Tips, Alternative Approaches to Pie Charts ,One-Dimensional Unit Charts , Insight Framework for Data Visualization , Steps in Insight Framework – Introduction to Data Storytelling and its elements . Trends and Forecasting – Create trend lines – Model types – Create forecast.

(13 hrs, CO4,5)

Course Outcomes: At the end of the course, students will be able to:

CO1 Infer the representation of tableau and its fields.

CO2 Explore charts that are present in tableau.

- CO3 Apply the various charts used for data visualization
- CO4 Apply visualization tips in charts
- CO5 Learn to connect the Database to tableau and forecast the predictions.

Text Books:

- 1 Ryan Sleeper,” Practical Tableau” O’Reilly Media, Inc, First Edition, 2018
- 2 Learning Tableau 2020: Create effective data visualizations, build interactive visual analytics, and transform your organization, 4th Edition, 2020

Extensive Reading:

- 1. <https://www.datacamp.com/courses/introduction-to-data-visualization-with-python>
- 2. <https://machinelearningmastery.com/data-visualization-methods-in-python>

BTAIML 505-20	Data Visualization Using Tableau Lab	0L:0T:2P	1 Credits
----------------------	---	-----------------	------------------

Laboratory Work as given in the theory curriculum as guided by the instructor.

.....

BTAIML 509-20	Java Programming	3L:0T:0P	3 Credits
----------------------	-------------------------	-----------------	------------------

Detailed contents:

UNIT 1:

The Java Environment: Installing Java, Java Program Development, Java Source File Structure, Compilation, Executions.

Basic Language Elements: Lexical Tokens, Identifiers, Keywords, Literals, Comments, Primitive Datatypes, Operators Assignments.

5 hrs., CO1, CO5

UNIT 2:

Object Oriented Programming: Class Fundamentals, Object & Object reference, Object Life time & Garbage Collection, Creating and Operating Objects, Constructor & initialization code block, Access Control, Modifiers, methods Nested, Inner Class & Anonymous Classes, Abstract Class & Interfaces Defining Methods, Argument Passing Mechanism, Method Overloading, Recursion, dealing with Static Members, Finalize() Method, Native Method. Use of “this

“reference, Use of Modifiers with Classes & Methods, Design of Accessors and Mutator Methods Cloning Objects, shallow and deep cloning, Generic Class Types.

Extending Classes and Inheritance: Use and Benefits of Inheritance in OOP, Types of Inheritance in Java, Inheriting Data members and Methods, Role of Constructors in inheritance, Overriding Super Class Methods, Use of “super”, Polymorphism in inheritance, Type Compatibility and Conversion Implementing interfaces.

10 hrs., CO2, CO5

UNIT 3:

Package: Organizing Classes and Interfaces in Packages, Package as Access Protection, Defining Package, CLASSPATH Setting for Packages, Making JAR Files for Library Packages Import and Static Import Naming Convention for Packages.

Exception Handling: The Idea behind Exception, Exceptions & Errors, Types of Exception, Control Flow in Exceptions, JVM reaction to Exceptions, Use of try, catch, finally, throw, throws in Exception Handling, In-built and User Defined Exceptions, Checked and Un-Checked Exceptions.

Array & String: Defining an Array, Initializing & Accessing Array, Multi –Dimensional Array, Operation on String, Mutable & Immutable String, Using Collection Bases Loop for String, Tokenizing a String, Creating Strings using StringBuffer.

Thread: Understanding Threads, Needs of Multi-Threaded Programming, Thread Life-Cycle, Thread Priorities, Synchronizing Threads, Inter Communication of Threads, Critical Factor in Thread –DeadLock,

10 hrs., CO3, CO5

UNIT 4:

GUI Programming: Designing Graphical User Interfaces in Java, Components and Containers, Basics of Components, Using Containers, Layout Managers, AWT Components, Adding a Menu to Window, Extending GUI Features Using Swing Components, Java Utilities (java.util Package) The Collection Framework : Collections of Objects , Collection Types, Sets , Sequence, Map, Understanding Hashing, Use of ArrayList & Vector.

10 hrs., CO4, CO5

UNIT 5:

Database Programming using JDBC: Introduction to JDBC, JDBC Drivers & Architecture, CRUD operation Using JDBC, Connecting to non-conventional Databases.

Java Server Technologies Servlet: Web Application Basics, Architecture and challenges of Web Application, Introduction to servlet, Servlet life cycle, Developing and Deploying Servlets, Exploring Deployment , Descriptor (web.xml), Handling Request and Response.

8 hrs., CO4, CO5

Course Outcomes: At the end of the course, students will be able to:

CO1: Analyze the necessity for Object Oriented Programming paradigm over structured programming and become familiar with the fundamental concepts in OOP like encapsulation, Inheritance and Polymorphism

CO2. Design and develop java programs, analyze, and interpret object oriented data and report results.

CO3. Design an object oriented system, AWT components and multithreaded processes as per needs and specifications.

CO4: Understand the database connectivity and design web based applications on client server model

CO5. Participate and succeed in competitive examinations like GATE, Engineering services, recruitment interviews etc.

BTAIML 510-20	Java Programming Lab	0L:0T:2P	1 Credits
----------------------	-----------------------------	-----------------	------------------

LIST OF EXPERIMENTS:

1. Write a Java program that implements Quick sort algorithm for sorting a list of names in ascending order
2. . Write a Java program that implements Bubble sort algorithm for sorting in descending order and also shows the number of interchanges required to sort the given set of integers.

3. Write a Java program that prompts the user for an integer and then prints out all the prime numbers up to that Integer?
4. Write a Java program that checks whether a given string is a palindrome or not. Ex: MADAM is a palindrome?
5. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result. Handle any possible exceptions like divided by zero.
6. Write a Java program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num 2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a Number Format Exception. If Num2 were Zero, the program would throw an Arithmetic Exception. Display the exception in a message dialog box.
7. Write a Java program for the following: Create a doubly linked list of elements. Delete a given element from the above list. Display the contents of the list after deletion.
8. a) Develop an applet in Java that displays a simple message.
b) Develop an applet in Java that receives an integer in one text field, and computes its factorial Value and returns it in another text field, when the button named “Compute” is clicked.
9. Write a Java program to create an abstract class named Shape that contains two integers and an empty method named print Area (). Provide three classes named Rectangle, Triangle, and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.
10. Suppose that a table named Table.txt is stored in a text file. The first line in the file is the header, and the remaining lines correspond to rows in the table. The elements are separated by commas. Write a java program to display the table using Labels in Grid Layout.
11. Write a Java program that handles all mouse events and shows the event name at the center of the window when a mouse event is fired (Use Adapter classes).
- 12 Write a Java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
13. Write a Java program that correctly implements the producer – consumer problem using the concept of interthread communication.

REFERENCE BOOKS

1. Java for Programmers, P. J. Deitel and H. M. Deitel, 10th Edition Pearson education.
2. Thinking in Java, Bruce Eckel, Pearson Education.
3. Java Programming, D. S. Malik and P. S. Nair, Cengage Learning.

4. Core Java, Volume 1, 9th edition, Cay S. Horstmann and G Cornell, Pearson.

Course Outcomes: At the end of the course, students will be able to:

CO1: Use Java compiler and eclipse platform to write and execute java program.

CO2: Understand and Apply Object oriented features and Java concepts.

CO3: Apply the concept of multithreading and implement exception handling.

CO4: Access data from a Database with java program.

CO5: Develop applications using Console I/O and File I/O, GUI applications

Note:

1. Use LINUX and MySQL for the Lab Experiments. Though not mandatory, encourage the use of Eclipse platform.

2. The list suggests the minimum program set. Hence, the concerned staff is requested to add more problems to the list as needed.

Course Code: BTAIML507-20	Course Title: User Interface development	3L:0T:0P	3 Credits	42 Hours
-------------------------------------	---	-----------------	------------------	-----------------

Detailed Contents:

UNIT 1:

The User Interface: Introduction & Overview, The importance of user interface – Defining the user interface, The importance of Good design, Characteristics of graphical and web user interfaces, Principles of user interface design. (8L)

UNIT 2:

The User Interface Design process: Obstacles, Usability, Human characteristics in Design, Human Interaction speeds, Business functions-Business definition and requirement analysis, Basic business functions, Design standards. (8L)

UNIT 3:

System menus and navigation schemes : Structures of menus, Functions of menus, Contents of menus, Formatting of menus, Phrasing the menu, Selecting menu choices, Navigating menus, Kinds of graphical menus (8L)

UNIT 4:

Windows: Characteristics, Components of window, Window presentation styles, Types of window, Window management, Organizing window functions, Window operations, Web systems, Characteristics of device based controls. (8L)

UNIT 5:

Screen based controls: Operable control, Text control, Selection control, Custom control, Presentation control, Windows Tests-prototypes, kinds of tests. (8L)

Text Book:

1. Wilbert O. Galitz, "The Essential Guide to User Interface Design", John Wiley & Sons, Second Edition 2002.

Reference Books:

1. Ben Sheiderman, "Design the User Interface", Pearson Education, 1998.
 2. Alan Cooper, "The Essential of User Interface Design", Wiley- Dream Tech Ltd.,2002
-

Course Code: BTAIML508-20	Course Title: User Interface Development Lab	0L:0T:2P	1 Credits
----------------------------------	---	-----------------	------------------

Design and Development of User Interfaces using HTML, CSS, Java script and Angular JS / Node JS technologies. The course instructor may assign tasks in lab .

Sixth Semester

Course Code: BTCS 702-18	Course Title: Data Mining and Data Warehousing	3L: 0T: 0P	Credits: 3
---	---	-------------------	-------------------

Detailed Contents:

UNIT 1:

Data Warehousing Introduction: design guidelines for data warehouse implementation, Multidimensional Models; OLAP- introduction, Characteristics, Architecture, Multidimensional view Efficient processing of OLAP Queries, OLAP server Architecture ROLAP versus MOLAP Versus HOLAP and data cube, Data cube operations, data cube computation.

Data mining: What is data mining, Challenges, Data Mining Tasks, Data: Types of Data, Data Quality, Data Pre-processing, Measures of Similarity and Dissimilarity

[10hrs]

UNIT 2:

Data mining: Introduction, association rules mining, Naive algorithm, Apriori algorithm, direct hashing and pruning (DHP), Dynamic Item set counting (DIC), Mining frequent pattern without candidate generation (FP, growth), performance evaluation of algorithms

Classification: Introduction, decision tree, tree induction algorithms – split algorithm based on information theory, split algorithm based on Gini index; naïve Bayes method; estimating predictive accuracy of classification method

[10 hrs]

UNIT 3:

Cluster analysis: Introduction, partition methods, hierarchical methods, density based methods, dealing with large databases, cluster software

Search engines: Characteristics of Search engines, Search Engine Functionality, Search Engine Architecture, Ranking of web pages, The search engine history, Enterprise Search, Enterprise Search Engine Software. **[10 hrs]**

UNIT 4:

Web data mining: Web Terminology and Characteristics, Locality and Hierarchy in the web, Web Content Mining, Web Usage Mining, Web Structure Mining, Web mining Software. **[8 hrs]**

Suggested Readings / Books:

1. Carlo Verzellis, Business Intelligence: Data mining and Optimization for Decision Making, WILEY.
2. Han J., Kamber M. and Pei J. , b Data mining concepts and techniques, Morgan Kaufmann Publishers (2011) 3rd ed.

4. Adriaans P., Zantinge D., Data mining, Pearson education press (1996), 1st ed.
5. Pooniah P. , Data Warehousing Fundamentals, Willey interscience Publication, (2001), 1st ed.

Course Code: BTITCS 601-20	Course Title: Data Analytics using R	3L:0T:0P	3Credits
--------------------------------------	---	----------	----------

Detailed Contents:

Module 1: Introduction to Data Analysis

Overview of Data Analytics, Need of Data Analytics, Nature of Data, Classification of Data: Structured, Semi-Structured, Unstructured, Characteristics of Data, Applications of Data Analytics [05 hrs] (CO1)

Module 2: R Programming Basics

Overview of R programming, Environment setup with R Studio, R Commands, Variables and Data Types, Control Structures, Array, Matrix, Vectors, Factors, Functions, R packages

[8 hrs] (CO1)

Module 3: Data Visualization using R

Reading and getting data into R (External Data): Using CSV files, XML files, Web Data, JSON files, Databases, Excel files. Working with R Charts and Graphs: Histograms, Boxplots ,Bar Charts, Line Graphs, Scatterplots, Pie Charts [11 hrs] (CO1,CO2)

Module 4: Statistics with R

Random Forest, Decision Tree, Normal and Binomial distributions, Time Series Analysis, Linear and Multiple Regression, Logistic Regression , Survival Analysis.

[10 hrs] (CO1,CO2)

Module 5: Prescriptive Analytics

Creating data for analytics through designed experiments, Creating data for analytics through active learning, Creating data for analytics through reinforcement learning.

[04 hrs] (CO1,CO2)

Course Outcomes:

The student will be able to:

1 Ability to apply statistical techniques using R Programming for data analytics and decision making.

2.To become data analyst..

Suggested Books:

1. An Introduction to R, Notes on R: A Programming Environment for Data Analysis and Graphics. W. N. Venables, D.M. Smith and the R Development Core Team. Version 3.0.1 (2013-05-16). URL: <https://cran.r-project.org/doc/manuals/r-release/R-intro.pdf>

Reference Books:

8. Joseph F Hair, William C Black et al , “Multivariate Data Analysis” , Pearson Education, 7th edition, 2013.
9. Mark Gardener, “Beginning R - The Statistical Programming Language”, John Wiley & Sons, Inc., 2012.
10. W. N. Venables, D. M. Smith and the R Core Team, “An Introduction to R”, 2013.

Course Code: BTDS601-20	Course Title: : Data Mining and Data Warehouse Lab	0L:0T:2P	1Credits
--------------------------------	---	----------	----------

List of Experiments:

Task 1: Build Data Warehouse and Explore WEKA

Task 2: Perform data preprocessing tasks and demonstrate performing association rule mining on data sets

Task 3: Demonstrate performing classification on data sets

Task 4: Demonstrate performing clustering on data sets

Task 5: Demonstrate performing Regression on data sets

Task 6: Create Credit Risk Assessment Sample Programs using suitable Credit Data set

Task 7: Create Sample Programs using Hospital Management System

Task 8: Beyond the Syllabus -Simple Project on Data Preprocessing

COURSE OUTCOMES: The students will be able to:

1. Understand the various kinds of tools.
2. Demonstrate the classification, clustering and etc. in large data sets.
3. Ability to add mining algorithms as a component to the exiting tools.
4. Ability to apply mining techniques for realistic data.

Course Code: BTDS602-20	Course Title: : Data Analytics using R Lab	0L:0T:2P	1Credits
--------------------------------	---	----------	----------

List of Experiment:

R -BASICS

Task 1: Downloading, installing and setting path for R

Task 2: Give an idea of R Data Types.

Task 3: R as a calculator: Perform some arithmetic operations in R.

Task 4: Demonstrate the process of creating a user defined function in R. .

Task 5: Perform some logical operations in R .

Task 6: Write an R script to change the structure of a Data frame .

Task 7: Write an R script to demonstrate loops

Task 8: Write an R script to demonstrate conditional statements: if, if else, switch

Task 9: Write an R script to convert a vector to factors.

Task 10: Write an R script to expand a data frame.

R- INTERMEDIATE

Task 11: Write an R script to demonstrate R objects.

Task 12: Demonstrate the following aggregate functions in R: sum, mean, count, min, max..

Task 13: Write an R script to read and write different files.

Task 14: Write an R script to find subset of a dataset .

Task 15: Elucidate the process of data exploration in R using read(),summary(), nrow(), ncol(),str().

Task 16: Write an R script to handle missing values in a dataset..

Task 17: Write an R script to handle outliers.

Task 18: Write an R script to handle invalid values.

Task 19: Visualize iris dataset using mosaic plot.

Task 20: Visualize correlation between sepal length and petal length in iris data set using scatter plot.

R- Advance

Task 21: Linear Regression: Consider the following mice data:

Height:140,142,150,147,139,152,154,135,148, 147. Weight: 59, 61, 66, 62, 57, 68, 69, 58, 63, 62. Derive relationship coefficients and summary for the above data .

Task 22: Consider the above data and predict the weight of a mouse for a given height and plot the results using a graph..

Task 23: Logistic Regression: Analyse iris data set using Logistic Regression. Note: create a subset of iris dataset with two species..

Task 24: Perform Logistic Regression analysis on the above mice data(Task.No.21) and plot the results dataset .

Task 25: Decision Tree: Implement ID3 algorithm in R.

Task 26: Implement C4.5 algorithm in R..

Task 27: Time Series: Write R script to decompose time series data into random, trend and seasonal data..

Task 28: Write R script to forecast time series data using single exponential smoothing method..

Task 29: Clustering: Implement K-means algorithm in R.

Task 30: Implement CURE algorithm in R

Lab Outcomes:

The student will be able to:

1. Develop classes incorporating object-oriented techniques;
2. Design and implement object-oriented concepts of inheritance and polymorphism;
3. Illustrate and implement STL class of containers and need for exceptions to handle errors for object oriented programs; &
4. Design and implement any real world based problem involving GUI interface using object-oriented concepts.

Reference Books:

1. Lecture Videos: <http://nptel.ac.in/courses/111106050/13>.
2. J. A. Bondy and U. S. R. Murty. Graph Theory with Applications.

ELECTIVE-II

Course Code: BTAIML601-20	Course Title: Graph Theory	3L:0T:0P	3Credits
-------------------------------------	-----------------------------------	----------	----------

Pre-requisites: An understanding of Mathematics in general is sufficient.

Detailed Contents:

Module 1: Introduction

Introduction-Discovery of graphs, Definitions, Subgraphs, Isomorphic graphs, Matrix representations of graphs, Degree of a vertex, Directed walks, paths and cycles, Connectivity in digraphs, Eulerian and Hamilton digraphs, Eulerian digraphs, Hamilton digraphs, Special graphs, Complements, Larger graphs from smaller graphs, Union, Sum, Cartesian Product, Composition, Graphic sequences, Graph theoretic model of the LAN problem, Havel-Hakimi criterion, Realization of a graphic sequence. [10 hrs] (CO1)

Module 2:

Connected graphs and shortest paths - Walks, trails, paths, cycles, Connected graphs, Distance, Cut-vertices and cut-edges, Blocks, Connectivity, Weighted graphs and shortest paths, Weighted graphs, Dijkstra's shortest path algorithm, Floyd-Warshall shortest path algorithm.

[8 hrs] (CO1, CO2)

Module 3:

Trees- Definitions and characterizations, Number of trees, Cayley's formula, Kircho-matrix-tree theorem, Minimum spanning trees, Kruskal's algorithm, Prim's algorithm, Special classes of graphs, Bipartite Graphs, Line Graphs, Chordal Graphs, Eulerian Graphs, Fleury's algorithm, Chinese Postman problem, Hamilton Graphs, Introduction, Necessary conditions and sufficient conditions.. [8 hrs] (CO3)

Module 4:

Independent sets coverings and matchings– Introduction, Independent sets and coverings: basic equations, Matchings in bipartite graphs, Hall's Theorem, König's Theorem, Perfect matchings in graphs, Greedy and approximation algorithms. [8 hrs] (CO3, CO4)

Module 5:

Vertex Colorings- Basic definitions, Cliques and chromatic number, Mycielski's theorem, Greedy coloring algorithm, Coloring of chordal graphs, Brooks theorem, Edge Colorings, Introduction and Basics, Gupta-Vizing theorem, Class-1 and Class-2 graphs, Edge-coloring of bipartite graphs, Class-2 graphs, Hajos union and Class-2 graphs, A scheduling problem and equitable edge-coloring. [10 hrs] (CO4)

Course Outcomes:

The student will be able to:

1. Know some important classes of graph theoretic problems.
2. Be able to formulate and prove central theorems about trees, matching, connectivity, colouring and planar graphs.
3. Be able to describe and apply some basic algorithms for graphs.
4. Be able to use graph theory as a modelling tool.

Suggested Books:

1. J. A. Bondy and U. S. R. Murty. Graph Theory, volume 244 of Graduate Texts in Mathematics. Springer, 1st edition, 2008.
2. J. A. Bondy and U. S. R. Murty. Graph Theory with Applications.

Reference Books:

1. Lecture Videos: <http://nptel.ac.in/courses/111106050/13>
2. Introduction to Graph Theory, Douglas B. West, Pearson .
3. Schaum's Outlines Graph Theory, Balakrishnan, TMH
4. Introduction to Graph Theory, Wilson Robin j, PHI
5. Graph Theory with Applications to Engineering And Computer Science, Narsing Deo, PHI
6. Graphs - An Introductory Approach, Wilson and Watkin

Course Code: BTAIML602-20	Course Title: Graph Theory Lab	0L:0T:2P	1Credits
-------------------------------------	---------------------------------------	----------	----------

List of Experiment:

- Task 1: Write a program to find the number of vertices, even vertices, odd vertices and number of edges in a Graph.
- Task 2: Write a program to Find Union, Intersection and ring-sum of 2 graphs.
- Task 3: Write a program to Find Minimum Spanning tree Using Prim's Algorithm.
- Task 4: Write a program to Find Minimum Spanning tree Using Kruskal's Algorithm.
- Task 5: Write a program to find Shortest Path between 2 Vertices using Dijkstra Algorithm.
- Task 6: Write a program to find Shortest Path between every pair of vertices in a graph using Floyd-Warshall's Algorithm.

Task 7: Write a program to find Shortest Path between 2 Vertices using Bellman Ford's Algorithm.

Task 8: Write a program for finding maximum Matching for bipartite graph

Task 9: Write a program for finding maximum Matching for General Path

Task 10: Write a program to find maximum flow from source node to sink node using Ford-Fulkerson Algorithm

Lab Outcomes:

The student will be able to:

1. Develop classes incorporating object-oriented techniques;
2. Design and implement object-oriented concepts of inheritance and polymorphism;
3. Illustrate and implement STL class of containers and need for exceptions to handle errors for object oriented programs; &
4. Design and implement any real world based problem involving GUI interface using object-oriented concepts.

Reference Books:

3. Lecture Videos: <http://nptel.ac.in/courses/111106050/13>.
4. J. A. Bondy and U. S. R. Murty. Graph Theory with Applications.

Course Code: BTAIML605-20	Course Title: Recommender System	3L:0T:0P	3Credits
-------------------------------------	---	----------	----------

Detailed Contents:

Module 1: Introduction

Introduction and basic taxonomy of recommender systems (RSs). Traditional and non-personalized RSs. Overview of data mining methods for recommender systems (similarity measures, classification, Bayes classifiers, ensembles of classifiers, clustering, SVMs, dimensionality reduction). Overview of convex and linear optimization principles

[3 hrs] (CO1)

Module 2: Content-based recommender systems

The long-tail principle. Domain-specific challenges in recommender systems. Content-based recommender systems. Advantages and drawbacks. Basic components of content-based RSs. Feature selection. Item representation Methods for learning user profiles

[3 hrs] (CO1, CO2)

Module 3: Collaborative Filtering (CF)-based RSs:

Mathematical optimization in CF RSs. Optimization objective. Baseline predictor through least squares. Regularization and overfitting. Temporal models. Step-by-step solution of the RS problem, Nearest-neighbor collaborative filtering (CF). User-based and item-based CF, comparison. Components of neighborhood methods (rating normalization, similarity weight computation, neighborhood selection). Hybrid recommender systems.

Module 4: Context awareness and Learning principles in RSs

Context-aware recommender systems. Contextual information models for RSs. Incorporating context in Rs. Learning to rank. Active learning in RSs. Multi-armed bandits and Reinforcement learning in RSs. Dynamic RSs.

[3 hrs] (CO4)

Module 5: User behaviour understanding in RSs

Foundations of behavioral science. User choice and decisions models. Choice models in RSs. Digital nudging and user choice engineering principles. Applications and examples for recommender systems.

[3 hrs] (CO4)

Module 6: Applications of RSs for content media, social media and communities

Music and video RSs. Datasets. Group recommender systems. Social recommendations. Recommending friends: link prediction models. Similarities and differences of RSs with task assignment in mobile crowd sensing. Social network diffusion awareness in RSs.

[3 hrs] (CO5)

Course Outcomes:

The student will be able to:

1. Understand the basic concepts of recommender systems .
2. Solve mathematical optimization problems pertaining to recommender systems .
3. Carry out performance evaluation of recommender systems based on various metrics.
4. Implement machine-learning and data-mining algorithms in recommender systems data sets.
5. Design and implement a simple recommender system.

Suggested Books:

1. C.C. Aggarwal, Recommender Systems: The Textbook, Springer, 2016.

Reference Books:

1. F. Ricci, L Rokach, B. Shapira and P.B. Kantor, Recommender systems handbook, Springer 2010.
2. J. Leskovec, A. Rajaraman and J. Ullman, Mining of massive datasets, 2nd Ed., Cambridge, 2012. (Chapter 9).

Course Code: BTAIML606-20	Course Title: Recommender System Lab	0L:0T:2P	1Credits
-------------------------------------	---	----------	----------

List of Experiment:

Part 1. Getting ready for recommender systems

Task1:What is a recommender?

Task 2: Taxonomy of recommender systems

Task 3: Machine learning and the Netflix Prize.

Task 4: The MovieGEEKs website.

Task 5: Building a recommender system.

Task 6: User behavior and how to collect it.

Task 7: Monitoring the system.

Task 8: Ratings and how to calculate them.

Task 9: Non-personalized recommendations.

Task 10: The user (and content) who came in from the cold.

Part 2. Recommender algorithms

Task11: Finding similarities among users and among content.

Task 12: Collaborative filtering in the neighbourhood.

Task13: Evaluating and testing your recommender.

Task14: Content-based filtering.

Task15: Finding hidden genres with matrix factorization.

Task 16: Taking the best of all algorithms: Implementing hybrid recommenders.

Task17: Ranking and learning to rank.

Task 18: Future of recommender systems.

Lab Outcomes:

The student will be able to:

1. How to collect data and how to use it when you add a recommender system to your application.
2. Learn the difference between a recommendation and an advertisement, and between a personal recommendation and a non-personal one.
3. Learn how to gather data to build your own recommender system.
4. Learned about the ecosystem and infrastructure around recommender systems.

Reference Books:

Practical Recommend Systems by Kim Falk.

Course Code: BTDS 603-20	Course Title: Big Data Analytics	L:3 T:0 P:0	3 Credits
---------------------------------	---	--------------------	------------------

Detailed Contents:

Module I

Introduction: Big Data Overview, The rising and importance of data sciences, Big data analytics in industry verticals

Hadoop Architecture: Hadoop Architecture, Hadoop ecosystem components, Hadoop Storage: HDFS, Hadoop Processing: MapReduce Framework, Hadoop Server Roles

Module II

Data Analytics Lifecycle and methodology: Business Understanding, Data Understanding, Data Preparation, Modeling, Evaluation, Communicating results, Deployment, Data exploration & preprocessing

Module III

Data Analytics - Theory & Methods: Measures and evaluation, Supervised learning, Linear/Logistic regression, Decision trees, Naïve Bayes, Unsupervised learning, K-means clustering, Association rules, Unstructured Data Analytics, Technologies & tools, Text mining, Web mining

Module IV

The Endgame: Operationalizing an Analytics project, Data Visualization Techniques, Creating final deliverables

Course Outcomes

1. Describe Big Data and its importance with its applications
2. Differentiate various big data technologies like Hadoop MapReduce, Pig, Hive, Hbase and No-SQL.
3. Apply tools and techniques to analyze Big Data.
4. Design a solution for a given problem using suitable Big Data Techniques

Text Books:

1. Hadoop: The Definitive Guide by Tom White
2. Big Data Analytics: From Strategic Planning to Enterprise Integration with Tools, Techniques, NoSQL, and Graph by David Loshin

3. Machine Learning by Tom M. Mitchell

Course Code: BTDS 604-20	Course Title: Big Data Analytics Lab	L:0 T:0 P:2	1 Credits
---------------------------------	---	--------------------	------------------

List of Experiments:

1. Hands-on with Map Reduce: Hadoop, Hive, MapR
2. Hands-on with NoSQL Databases: S3, Hadoop Distributed File System(HDFS)
3. Hands-on with Statistical Packages
4. Hands-on with Visual Data Analysis tools

Lab Outcomes:

- CO1: Perform data gathering of large data from a range of data sources.
- CO2: Critically analyse existing Big Data datasets and implementations, taking practicality, and usefulness metrics into consideration.
- CO3: Select and apply suitable statistical measures and analyses techniques for data of various structure and content and present summary statistics
- CO4: Employ advanced statistical analytical skills to test assumptions, and to generate and present new information and insights from large datasets

ELECTIVE –III

Course Code: BTDS605-20	Course Title: No SQL using MongoDB	3L:0T:0P	3Credits
--------------------------------	---	----------	----------

Detailed Contents:

Module 1: Introduction and Basic concepts

Introduction to NoSQL Databases, NoSQL features, Different types of NoSQL databases, Difference between NOSQL and RDBMS, Benefits of NoSQL

Introduction to MongoDB, MongoDB architecture, Data modelling in MongoDB, Advantages of MongoDB over RDBMS [8 hrs] (CO1)

Module 2: Overview and Installation of MongoDB

Installation of MongoDB, Objectives, Design Goals, The Mongo Shell, JSON Introduction, JSON Structure, Configuration file in MongoDB, Creating a connection string, Hosting MongoDB, Authenticating into a DB

Schema development: Creating the model, Filtering data

Data Modeling: Schema Design Patterns, Case studies and Tradeoffs [8 hrs] (CO2)

Module 3: Operations on MongoDB

CRUD (Creating, Reading & Updating Data) Mongo Shell, Query operators, Introduction to Documents, Collections, Database Commands in MongoDB, Inserting and Saving Documents, Inserting multiple documents

Update Operators , Updating Documents Removing Documents, Document Replacement, Operator and Modifiers, JSON File format for storing documents Indexing in MongoDB, Single index, Finding index, Multikey index

Aggregation Framework Goals, Use of Pipeline, Pipeline Operations- \$match, \$sort, \$group, \$project,, \$unwind, \$limit, \$skip, MapReduce, Comparison with SQL facilities. [8 hrs] (CO3)

Module 4: MongoDB Replication

Replication, Advantages of replication, Implementation of replication, Managing Configuration File in MongoDB, Setting up replica set in MongoDB

Replication configuration , Checking the Configuration, Change replication configuration, Replication status, Remove members, Adding new port in replica set

Terminologies used in replication, Help on replication, Adding arbitrator, Stepping down a member, Impact Of Replication And Sharding On Design And Development. [8 hrs] (CO4)

Module 5: MongoDB Handling

Storage Classes, Backup and restore, Export and import of data, Importing from JSON file, Choosing the right database , Database era ,Taking decisions on database, Strengths and

weakness of database Free and open source database, Indexing and Performance Considerations, Performance Using Indexes, Monitoring And Understanding Performance, Performance In Sharded Environments, Next Generation Databases. [10 hrs] (CO5)

Course Outcomes:

The student will be able to:

1. Differentiate between traditional and latest databases and can understand MongoDB.
2. Learn how to install and configure MongoDB .
3. Learn to implement and work with NoSQL Databases.
4. Demonstrate the concept of data replication.
5. Understand the basic storage architecture.

Suggested Books:

1. Kristina Chodorow and Michael Dirolf, MongoDB: The Definitive Guide 1st Edition, O'Reilly Media, Inc.
2. Banker, Kyle, et al. MongoDB in action: covers MongoDB version 3.0. Simon and Schuster, 2016.

Course Code: BTDS606-20	Course Title: No SQL using MongoDB Lab	0L:0T:2P	1Credits
--------------------------------	---	----------	----------

List of Experiment:

- Task 1: Installation of MongoDB on Windows.
- Task 2: How to Create Database & Collection in MongoDB
- Task 3: Write a program to demonstrate Add MongoDB Array using insert().
- Task 4: Write a program to demonstrate MongoDB Query Document.
- Task 5: Write a program to demonstrate MongoDB Cursor.
- Task 6: Write a program to demonstrate order with MongoDB **Sort() & Limit() methods**.
- Task 7: Write a program to demonstrate MongoDB **Count() & Remove() functions**.
- Task 8: Write a program to demonstrate MongoDB Update() Document.
- Task 9: Write a program to demonstrate MongoDB Backup Methods like MongoDB Security, Monitoring & Backup.

Task 10: Write a program to demonstrate how to create users and add their roles.

Task 11: Write a program to demonstrate MongoDB Replication.

Task 12: Write a program to demonstrate MongoDB Sharding .

Task 13: Write a program to demonstrate MongoDB Indexing using createIndex() & dropindex().

Task 14: Write a program to demonstrate MongoDB Regular Expression using \$Regex.

Task 15: Differentiate between MongoDB Vs. MySQL.

Lab Outcomes:

The student will be able to:

1. Develop databases with NoSQL.
2. Design and implement concepts of replication and sharding.
3. Illustrate and implement Backup and recovery methods.
4. Design and implement any real world based data and can implement different queries.

Reference Books:

1. Kristina Chodorow and Michael Dirolf, MongoDB: The Definitive Guide 1st Edition, O'Reilly Media, Inc
2. Banker, Kyle, et al. MongoDB in action: covers MongoDB version 3.0. Simon and Schuster, 2016.

Course Code: BTCS 618-18	Course Title : Machine Learning	3L:0T:0P	3Credits
---------------------------------	--	-----------------	-----------------

Detailed Contents:

UNIT 1: Introduction: Well-Posed learning problems, Basic concepts, Designing a learning system, Issues in machine learning. Types of machine learning: Learning associations, Supervised learning, Unsupervised learning and Reinforcement learning.

[4hrs] (CO 1)

UNIT 2: Data Pre-processing: Need of Data Pre-processing, Data Pre-processing Methods: Data Cleaning, Data Integration, Data Transformation, Data Reduction; Feature Scaling (Normalization and Standardization), Splitting dataset into Training and Testing set.

[4hrs] (CO 2)

UNIT 3: Regression: Need and Applications of Regression, Simple Linear Regression, Multiple Linear Regression and Polynomial Regression, Evaluating Regression Models Performance (RMSE, Mean Absolute Error, Correlation, RSquare, Accuracy with acceptable error, scatter plot, *etc.*)

[6hrs] (CO 3)

UNIT 4 Classification: Need and Applications of Classification, Logistic Regression, Decision tree, Tree induction algorithm – split algorithm based on information theory, split algorithm based on Gini index; Random forest classification, Naïve Bayes algorithm; K-Nearest Neighbours (K-NN), Support Vector Machine (SVM), Evaluating Classification Models Performance (Sensitivity, Specificity, Precision, Recall, *etc.*). **Clustering:** Need and Applications of Clustering, Partitioned methods, Hierarchical methods, Density-based methods.

[12hrs] (CO 4)

UNIT 5 Association Rules Learning: Need and Application of Association Rules Learning, Basic concepts of Association Rule Mining, Naïve algorithm, Apriori algorithm. **Artificial Neural Network:** Need and Application of Artificial Neural Network, Neural network representation and working, Activation Functions. **Genetic Algorithms:** Basic concepts, Gene Representation and Fitness Function, Selection, Recombination, Mutation and Elitism.

[14hrs] (CO 5)

Course Outcomes:

After undergoing this course, the students will be able to:

CO1: Analyse methods and theories in the field of machine learning

CO2: Analyse and extract features of complex datasets

CO3: Deploy techniques to comment for the Regression

CO4: Comprehend and apply different classification and clustering techniques

CO5: Understand the concept of Neural Networks and Genetic Algorithm

Suggested Readings/ Books:

Text Books:

1. Mitchell M., T., Machine Learning, McGraw Hill (1997) 1stEdition.
2. Alpaydin E., Introduction to Machine Learning, MIT Press (2014) 3rdEdition.
3. Vijayvargia Abhishek, Machine Learning with Python, BPB Publication (2018)

Reference Books:

1. Bishop M., C., Pattern Recognition and Machine Learning, Springer-Verlag (2011) 2ndEdition.
2. Michie D., Spiegelhalter J. D., Taylor C. C., Campbell, J., Machine Learning, Neural and Statistical Classification. Overseas Press (1994).

Course Code: BTCS619-18	Course Title: machine Learning Lab	L:0;T:0;P:1	Credits
--------------------------------	---	--------------------	----------------

Detailed List of Tasks:

1. Implement data pre-processing
2. Deploy Simple Linear Regression
3. Simulate Multiple Linear Regression
4. Implement Decision Tree
5. Deploy Random forest classification
6. Simulate Naïve Bayes algorithm
7. Implement K-Nearest Neighbors (K-NN), k-Means
8. Deploy Support Vector Machine, Apriori algorithm
9. Simulate Artificial Neural Network
10. Implement the Genetic Algorithm code

Suggested Tools Python/R/MATLAB

Course Code: BTAIML701-20	Course Title : Computer Vision	3L:0T:0P	3Credits
----------------------------------	---------------------------------------	-----------------	-----------------

Detailed Contents:

- UNIT 1 Introduction to Digital Image Processing:** The Origins of Digital Image Processing, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Relationships between pixels.
Intensity transformation and Spatial Filtering: Image negation, Log transformations, Power law transformation, Smoothing Spatial Filters, Sharpening Spatial Filters. **6 hrs., CO1,2**
- UNIT 2 Filtering in Frequency Domain:** Preliminary Concepts, The Discrete Fourier Transform (DFT) of One Variable, The Discrete Fourier Transform of Two Variables, Properties of 2-D DFT, Smoothing Spatial Filters, Sharpening Spatial Filters, Fast Fourier Transform.
Image Restoration: Model for Image Degradation/Restoration Process, Noise Models, Restoration by Spatial Filtering, Restoration by Frequency Domain Filtering, Homographies. **10 hrs., CO2**
- UNIT 3 Color Image Processing:** Color Models, Pseudo color Image Processing, Color Transformations, Color Image Smoothing and Shapening.
Wavelets and Multiresolution Processing: Image Pyramids, Haar Transform, Multiresolution Expansion, Wavelet Transform in 1-D.
Morphological Image Processing: Erosion and Dilation, Opening and Closing, Hit or Miss Transformation, Basic Morphological Algorithms. **12hrs. CO2,3**
- UNIT 4 Stereo and multi-view reconstruction, Structure-from-Motion**
 projection matrices, camera calibration, epipolar geometry, fundamental and essential matrices, disparity maps, optical flows, volumetric shape reconstruction from window-based towards regularization-based stereo, loss functions **10 hrs., CO4**
- UNIT 5 Object Recognition:** Pattern and Pattern Classes, Object recognition methods. **4 hrs., CO4**

Course Outcomes: At the end of the course, students will be able to:

1. Design and implement spatial domain filters.
2. Implement smoothing and sharpening operators.
3. High pass and low pass filters for smoothing and sharpening of images.
4. Learn multi view and motion structure

Suggested Books:

Name of Book/ Authors/ Publisher	Year of Publication/ Reprint
Digital Image Processing /Gonzalez Rafael C. and Woods Richard E./ Prentice–Hall of India	2011
Digital Image Processing/ Pratt William K./ PIKS Inside(3rd ed.), New Jersey: John Wiley & Sons, Inc.	2001
Digital Image Processing/ Bernd Jahne/ Springer	2002
Fundamentals of Digital Image Processing/ Annadurai S. and Shanmuga lakshmi R./ New Delhi: Pearson Education	2007
Digital Image Processing: An Algorithmic Approach,/ Joshi M.A./ New Delhi: Prentice Hall of India	2006

Course Code: BTAIML702-20	Course Title : Computer Vision Lab	0L:0T:2P	1Credits
----------------------------------	---	-----------------	-----------------

Note: The implementation can be performed in MATLAB/C/C++/Java/Python on binary/grayscale/color images.

1. Implementation of basic image transformations:
 - a. Log
 - b. Power law
 - c. Negation
2. Implementation the following:
 - a. Histogram processing
 - b. Histogram equalization/matching
3. Implementation of piecewise linear transformations
 - a. Contrast stretching
 - b. Grey level slicing
 - c. Bit plane slicing
4. Implementation of image enhancement/smoothing using
 - a. Linear (weighted and non weighted filters)
 - b. Order statistics filters (Non linear filters)
 - i. Mean
 - ii. Median
 - iii. Min
 - iv. Max
 - v. Average
5. Implementation of image enhancement/sharpening using
 - a. Laplacian operators
 - b. Sobel's operators
 - c. Robert's cross operators
6. Implement the 2D-DFT to obtain Fourier coefficients and reconstruct the image, i.e., IDFT.
7. Image enhancement using Fourier low pass filters
 - a. Ideal
 - b. Butterworth
 - c. Gaussian
8. Image enhancement using Fourier high pass filters
 - a. Ideal
 - b. Butterworth
 - c. Gaussian
9. Implement algorithms to detect the following in an image
 - a. Point
 - b. Line
 - c. Boundary
10. Implement 2D wavelet transform and IDFT.

Seventh/ Eighth Semester

Course Code: BTCS601-18	Course Title : Compiler Design	3L:0T:0P	3Credits
--------------------------------	---------------------------------------	-----------------	-----------------

Detailed Contents:

UNIT 1: Unit I Introduction to Compilers:

Structure of a compiler – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens – Recognition of Tokens – Lex – Finite Automata – Regular Expressions to Automata – Minimizing DFA.

[8 hrs., CO 1]

Unit II :Syntax Analysis:

Role of Parser – Grammars – Error Handling – Context-free grammars – Writing a grammar, Top-Down Parsing – General Strategies Recursive Descent Parser – Predictive Parser-LL(1) Parser-Shift Reduce Parser-LR Parser-LR (0) Item Construction of SLR Parsing Table - Introduction to LALR Parser – Error Handling and Recovery in Syntax Analyzer-YACC.

[8 hrs., CO 2]

Unit III : Intermediate Code Generation:

Syntax Directed Definitions, Evaluation Orders for Syntax Directed Definitions, Intermediate Languages: Syntax Tree, Three Address Code, Types and Declarations, Translation of Expressions, Type Checking.

[8 hrs., CO 3]

Unit IV: Run-Time Environment and Code Generation:

Storage Organization, Stack Allocation Space, Access to Non-local Data on the Stack, Heap Management – Issues in Code Generation – Design of a simple Code Generator.

[6 hrs., CO 4]

Unit V: Code Optimization:

Principal Sources of Optimization – Peep-hole optimization – DAG- Optimization of Basic Blocks-Global Data Flow Analysis – Efficient Data Flow Algorithm.

[6 hrs., CO 5]

Course Outcomes:

After undergoing this course, the students will be able to:

CO1: Build concepts on lexical analysis.

CO2: Understand strategies of syntax analysis.

CO3: Learn techniques of Intermediate code generation.

CO4: Understand code design issues and design code generator.

CO5: Design and develop optimized codes.

Suggested Readings/ Books:

1. A.V. Aho, Monica, R.Sethi, J.D.Ullman, “Compilers, Principles, Techniques and Tools”, Second Edition, Pearson Education/Addison Wesley, 2009.
2. Andrew W. Appel, “Modern Compiler Implementation in Java”, Second Edition, 2009.
3. J.P. Tremblay and P.G. Sorrenson, “The Theory and Practice of Compiler Writing”, McGraw Hill, 1985.

Course Code: BTCS 504-18	Course Title: Computer Networks	3L:0T:0P	3 Credits
------------------------------------	--	-----------------	------------------

Detailed Contents:**Module 1: Data Communication Components**

Representation of data and its flow Networks, Various Connection Topology, Protocols and Standards, OSI model, Transmission Media, LAN: Wired LAN, Wireless LANs, Connecting LAN and Virtual LAN, Techniques for Bandwidth utilization: Multiplexing - Frequency division, Time division and Wave division, Concepts on spread spectrum.

[8hrs] (CO1)

Module 2: Data Link Layer and Medium Access Sub Layer

Error Detection and Error Correction - Fundamentals, Block coding, Hamming Distance, CRC; Flow Control and Error control protocols - Stop and Wait, Go back – N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Random Access, Multiple access protocols - Pure ALOHA, Slotted ALOHA, CSMA/CD, CDMA/CA.

[10 hrs] (CO2)

Module 3: Network Layer

Switching, Logical addressing – IPV4, IPV6; Address mapping – ARP, RARP, BOOTP and DHCP – Delivery, Forwarding and Unicast Routing protocols.

[8 hrs] (CO3)

Module 4: Transport Layer

Process to Process Communication, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP Congestion Control; Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.

[8 hrs] (CO3)

Module 5: Application Layer

Domain Name Space (DNS), DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls, Basic concepts of Cryptography.

[8 hrs] (CO4)

Course Outcomes: The student will be able to:

CO1: Explain the functions of the different layer of the OSI Protocol;

CO2: Describe the function of each block of wide-area networks (WANs), local area networks(LANs) and Wireless LANs (WLANs);

CO3: Develop the network programming for a given problem related TCP/IP protocol; &

CO4: Configure DNS DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP,SNMP, Bluetooth, Firewalls using open source available software and tools.

Text Books:

1. Data Communication and Networking, 4th Edition, Behrouz A. Forouzan, McGraw-Hill.
2. Data and Computer Communication, 8th Edition, William Stallings, Pearson PrenticeHall India.

Reference Books:

1. Computer Networks, 8th Edition, Andrew S. Tanenbaum, Pearson NewInternational Edition.
 2. Internetworking with TCP/IP, Volume 1, 6th Edition Douglas Comer, Prentice Hall ofIndia.
-

ELECTIVE IV

Course Code: BTDS701-20	Course Title: Social Network Analysis	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Detailed Contents:

Module 1: Social Network Analysis: Preliminaries and definitions, Erdos Number Project, Centrality measures, Balance and Homophily.

Random graph models: Random graphs and alternative models, Models of network growth, Navigation in social Networks.

CO1 [8 hrs]

Module 2: Network topology and diffusion, Contagion in Networks, Complex contagion, Percolation and information, Epidemics and information cascades. Cohesive subgroups, Multidimensional Scaling, Structural equivalence, roles and positions, Ego networks, Weak ties, Structural holes.

CO1,2 [10 hrs]

Module 3: Small world experiments, small world models, origins of small world, Heavy tails, Small Diameter, Clustering of connectivity. The Erdos Renyi Model, Clustering Models, Preferential Attachment.

CO1,4 [8 hrs]

Module 4: Navigation in Networks Revisited, Important vertices and page rank algorithm, towards rational dynamics in networks, basics of game theory.

CO3 [6 hrs]

Module 5: Coloring and consensus, biased voting, network formation games, network structure and equilibrium, behavioral experiments, Spatial and agent-based models.

CO1,4 [8 hrs]

Course Outcomes:

The student will be able to:

1. Understand a broad range of network concepts and theories.
2. Appreciate how network analysis can contribute to increasing knowledge about diverse aspects of society.
3. Analyse social network data using various software packages.
4. Present results from social network analysis, both orally and in writing.

Text Books:

1. S. Wasserman and K. Faust. Social Network Analysis: Methods and Applications (Cambridge, Cambridge University Press, 1994).

Suggested Books:

2. D. Easley and J. Kleinberg, Networks, Crowds and Markets: Reasoning about a highly connected world.
-

Course Code: BTDS702-20	Course Title: Social Network Analysis	0L:0T:2P	1Credits
	lab		

The Laboratory assignments may be given by the instructor in consonance with theory topics.

Course Code: BTCS 704-18	Course Title : Deep Learning	3L:0T:0P	3Credits
---------------------------------	-------------------------------------	-----------------	-----------------

Detailed Contents:

UNIT 1: Machine Learning Basics: Learning, Under-fitting, Overfitting, Estimators, Bias, Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning, Unsupervised Learning and Stochastic Gradient Decent.

[4hrs] (CO 1)

UNIT 2: Deep Feedforward Network: Feed-forward Networks, Gradient-based Learning, Hidden Units, Architecture Design, Computational Graphs, Back-Propagation, Regularization, Parameter Penalties, Data Augmentation, Multi-task Learning, Bagging, Dropout and Adversarial Training and Optimization.

[4hrs] (CO 2)

UNIT 3: Convolution Networks: Convolution Operation, Pooling, Basic Convolution Function, Convolution Algorithm, Unsupervised Features and Neuroscientific for convolution Network.

[6hrs] (CO 3)

UNIT 4: Sequence Modelling: Recurrent Neural Networks (RNNs), Bidirectional RNNs, Encoder- Decoder Sequence-to-Sequence Architectures, Deep Recurrent Network, Recursive Neural Networks and Echo State networks.

[12hrs] (CO 4)

UNIT 5: Deep Generative Models: Boltzmann Machines, Restricted Boltzmann Machines, Deep Belief Networks, Deep Boltzmann Machines, Sigmoid Belief Networks, Directed Generative Net, Drawing Samples from Auto – encoders.

[14hrs] (CO 5)

Course Outcomes:

After undergoing this course, the students will be able to:

CO1: Comprehend the advancements in learning techniques

CO2: Compare and explain various deep learning architectures and algorithms.

- CO3: Demonstrate the applications of Convolution Networks
- CO4: Apply Recurrent Network for Sequence Modelling
- CO5: Deploy the Deep Generative Models

Suggested Readings/ Books:

Text Books:

1. Goodfellow L., Bengio Y. and Courville A., *Deep Learning*, MIT Press (2016).
2. Patterson J. and Gibson A., *Deep Learning: A Practitioner's Approach*, O'Reilly (2017), 1st ed.

Reference Books:

1. Haykin S., *Neural Network and Machine Learning*, Prentice Hall Pearson (2009), 3rd ed.
2. Geron A., *Hands-on Machine Learning with Sci-kit and TensorFlow*, O'Reilly Media (2017)

.....

Course Code: BTCS 705-18	Course Title: Deep Learning Lab	L:0;T:0; 2P:	Credits;1
---------------------------------	--	---------------------	------------------

Detailed List of Tasks:

- Creating a basic network and analyze its performance
- Deploy the Confusion matrix and simulate for Overfitting
- Visualizing a neural network
- Demo: Object Detection with pre-trained RetinaNet with Keras
- Neural Recommender Systems with Explicit Feedback
- Backpropagation in Neural Networks using Numpy
- Neural Recommender Systems with Implicit Feedback and the Triplet Loss
- Fully Convolutional Neural Networks
- ConvNets for Classification and Localization
- Text Classification and Word Vectors
- Character Level Language Model (GPU required)

Suggested Tools Python/R/MATLAB

.....

Course Code: BTDS703-20	Course Title : Sentiment Analysis	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Course Details:

Module I: Introduction (15 Hrs) CO1

Introduction, Sentiment analysis applications, Sentiment analysis research, Sentiment analysis as mini-NLP, The Problem of Sentiment Analysis, Definition of opinion, Definition of opinion summary, different types of opinions, Document Sentiment Classification, Supervised sentiment classification, Unsupervised sentiment classification, Sentiment rating prediction

Module II: Sentence Subjectivity and Sentiment Classification (15 Hrs) CO1,2

Sentence Subjectivity and Sentiment Classification, Subjectivity, Sentence Subjectivity Classification, Sentence Sentiment Classification, Aspect Sentiment Classification, Rules of Sentiment composition, Negation and Sentiment, Aspect and Entity Extraction, Frequency based aspect extraction, Exploring syntactic relations, Using supervised learning

Module III: Sentiment Lexicon Generation (15 Hrs) CO2

Sentiment Lexicon Generation, Dictionary based approach, Corpus based approach, Sentiment word embedding, Analysis of Comparative Opinions, Problem definition, Identifying comparative sentences, Identifying the preferred entity set, Special types of comparison, Opinion Summarization and Search, Aspect based opinion summarization, enhancements to aspect based summaries, Traditional summarization

Module IV: Analysis of Debates and Comments (15 Hrs) CO3

Analysis of Debates and Comments, Recognizing stances in debates, Modeling debates/Discussions, Modeling comments, Mining Intents, Problem of intent mining, Intent classification, Fine grained mining of intent, Detecting Fake or Deceptive Opinions, Different types of Spam, Supervised fake review detection, Automated discovery of abnormal patterns, Model based behavioral analysis, Group spam detection, Quality of Reviews, Quality prediction as a regression problem

Course Outcomes:

CO1: To understand the underlying structure of the problem and the language constructs commonly used to express opinions, sentiments, and emotions

CO2: To understand core areas of sentiment analysis

CO3: To understand debate analysis, intention mining, and fake-opinion detection

Textbook: Sentiment Analysis: Mining Opinions, Sentiments, and Emotions, by Bing Liu

References:

1. Sentiment Analysis in Social Networks By Federico Pozzi, Elisabetta Fersini, Enza Messina, Bing Liu · 2016
2. Sentiment Analysis for Social Media, Antonio Moreno, Carlos A. Iglesias, MDPI 2020
3. New Opportunities for Sentiment Analysis and Information Processing, Aakansha Sharaff, G.

R. Sinha, Surbhi Bhatia, IGI Global, 2021

4. Sentiment Analysis and Knowledge Discovery in Contemporary Business, Dharmendra Singh Rajput, Ramjeevan Singh Thakur, S. Muzamil Basha, IGI Global, 2018

Course Code: BTDS704-20	Course Title : Sentiment Analysis	0L:0T:2P	1Credits
--------------------------------	--	-----------------	-----------------

Lab work will be given by instructor in consonance with the topics in theory.

ELECTIVE V

Course Code: BTDS705-20	Course Title: Business Intelligence	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Pre-requisites:

Detailed Contents:

Module 1: Business Intelligence:

Effective and timely decisions – Data, information and knowledge – Role of mathematical models – Business intelligence architectures: Cycle of a business intelligence analysis – Enabling factors in business intelligence projects – Development of a business intelligence system – Ethics and business intelligence.

[10 hrs]

Module 2: Knowledge delivery:

The business intelligence user types, Standard reports, Interactive Analysis and Ad Hoc Querying, Parameterized Reports and Self-Service Reporting, dimensional analysis, Alerts/Notifications,

[10 hrs]

Module 3: Visualization:

Charts, Graphs, Widgets, Scorecards and Dashboards, Geographic Visualization, Integrated Analytics, Considerations: Optimizing the Presentation for the Right Message.

[12 hrs]

Module 4: Efficiency measures – The CCR model: Definition of target objectives- Peer groups – Identification of good operating practices; cross efficiency analysis – virtual inputs and outputs – Other models. Pattern matching – cluster analysis, outlier analysis.

[10 hrs]

Course Outcomes:

The student will be able to:

1. Explain the fundamentals of business intelligence.
2. Link data mining with business intelligence.
3. Apply various modelling techniques.
4. Explain the data analysis and knowledge delivery stages.
5. Apply business intelligence methods to various situations.
6. Decide on appropriate technique.

Suggested Books:

Text books:

1. Efraim Turban, Ramesh Sharda, Dursun Delen, “Decision Support and Business Intelligence Systems”, 9th Edition, Pearson 2013.

Reference books:

 - 3 David Loshin Morgan, Kaufman, “Business Intelligence: The Savvy Manager’s Guide”, Second Edition, 2012.
 - 4 Cindi Howson, “Successful Business Intelligence: Secrets to Making BI a Killer App”, McGraw-Hill, 2007.
 - 5 Ralph Kimball , Margy Ross , Warren Thornthwaite, Joy Mundy, Bob Becker, “The Data Warehouse Lifecycle Toolkit”, Wiley Publication Inc.,2007.
-

Course Code: BTDS706-20	Course Title: Business Intelligence lab	0L:0T:2P	1Credits
--------------------------------	--	-----------------	-----------------

Lab work using business intelligence tools viz. advanced ms-excel, BI- tools etc. based on theory topics will be covered by the instructor

Course Code: BTDS707-20	Course Title : Interoperable Web Technologies	3L:0T:0P	3Credits
--------------------------------	--	-----------------	-----------------

Course details: s

Unit 1

Web Development Fundamentals: Fundamentals of Web Design, Webpage and Website, Web application, HTML Typography, Images, Tables, Lists, Hyperlinks etc., CSS Syntax and usage, CSS Selectors, CSS on body, CSS on Text, CSS on Links, CSS on Tables, CSS on Lists, CSS on Forms, CSS on Images, CSS on DIV, A Template, W3.CSS Framework.

Unit 2

JavaScript and ECMA Script 6: JavaScript Fundamentals, Grammar and types, Control flow and error handling, Loops, Function, Objects, Arrays, Promises, ES6 Let and const, Template literals, Arrow Function, Default parameter, Async Await.

Unit 3

Node JS and Express JS Module : Node.js overview, Node.js - basics and setup, Node.js console, Node.js command utilities, Node.js modules, concepts, Node.js events, database access, Node.js with Express.js, Express.js Request/Response, Express.js Get, Express.js Post, Express.js Routing, Express.js Cookies, Express.js File Upload, Middleware, Express.js Scaffolding, Template.

Unit 4

MySQL and MongoDB: MySQL Concepts, Create, Read, Update, Delete Operation, SQL and

NoSQL concepts, Create and manage MongoDB, Migration of data into MongoDB, MongoDB with NodeJS, Services offered by MongoDB.

Unit 5

ReactJS: Introduction and overview, ReactJS installation and environment setup, Introducing JSX, Rendering Elements, Components and Props, State and Lifecycle, Handling Events, Conditional Rendering, Lists and Keys, Forms, Lifting State Up, Redux for state management, Redux Saga or Thunk.

Course outcomes (COs):

After the completion of the course, the student will be able to:

1. Recall the fundamentals of web design and explain different frontend and backend technologies for web development.
2. Apply and analyze HTML elements and CSS for webpage development.
3. Develop proficiency in JavaScript and Node js as frontend platform and compare SQL and NOSQL concepts for managing MongoDB backend database.

Text Books: -

1. Deitel, Deitel and Nieto, “*Internet and Worldwide Web -How to Program*”, 5th Edition, PHI, 2011.
2. Jeffrey C Jackson, “*Web Technology – A computer Science perspective*”, Pearson Education, 2007.
3. Kyle Simpson, “*You Don't Know JS – ES6 & Beyond*”, January 2016
4. Zakas, Nicholas C, “*Understanding ECMAScript 6: The Definitive Guide for JavaScript Developers*”.
5. Greg Lim, “*Beginning Node.js, Express & MongoDB Development*”.
6. Robin Wieruch, “*The Road to React: Your journey to master React.js in JavaScript*”, 2021 Edition.

3. <https://reactjs.org/docs/getting-started.html>

Course Code: BTDS708-20	Course Title : Interoperable Web Technologies lab	0L:0T:2P	1Credits
--------------------------------	--	-----------------	-----------------

List of Experiments:

1. Create a simple webpage using HTML that includes images, tables, and hyperlinks.

2. Use CSS to style the webpage created in exercise 1 by adding selectors, applying styles to text, links, tables, and lists.
 3. Create a form in HTML and use CSS to style it.
 4. Use JavaScript to create a program that prompts the user for their name and then displays a personalized greeting.
 5. Create a program in JavaScript that calculates the area of a circle based on user input.
 6. Use Node.js and Express.js to create a simple web application that displays data from a database.
 7. Create a program in JavaScript that uses loops and arrays to generate a multiplication table.
 8. Use MongoDB to create a database of users and allow users to create, read, update, and delete their data.
 9. Use ReactJS to create a simple component that displays a list of items with conditional rendering.
 10. Use Redux to manage the state of a ReactJS application and implement middleware to handle asynchronous actions.
-

Course Code: BTDS709-20	Course Title : Optimization Techniques	0L:0T:2P	1Credits
--------------------------------	---	-----------------	-----------------

Course details:

MODULE - I

DEVELOPMENT OF O.R AND ALLOCATION

Classes: 09

Development, definition, characteristics and phases, types of operation research models, applications; Allocation: linear programming, problem formulation, graphical solution, simplex method, artificial variables techniques, two-phase method, big-M method.

MODULE - II

TRANSPORTATION AND ASSIGNMENT PROBLEM

Classes: 09

Transportation problem: Formulation, optimal solution, unbalanced transportation problem, Degeneracy; Assignment problem, formulation, optimal solution, variants of assignment problem, traveling salesman problem

MODULE - III

SEQUENCING AND REPLACEMENT

Classes: 09

Sequencing: Introduction, flow, shop sequencing, n jobs through two machines, n jobs through three machines, job shop sequencing, and two jobs through “m” machines. Replacement:

Introduction: Replacement of items that deteriorate with time, when money value is not counted and counted, replacement of items that fail completely, group replacement.

MODULE - IV

THEORY OF GAMES AND INVENTORY

Classes: 09

Theory Of Games: Introduction – Terminology, Solution of games with saddle points and without saddle points, 2×2 games, dominance principle, m X 2 & 2 X n games, Graphical method. Inventory: Introduction, Single item, Deterministic models, Purchase inventory models with one price break and multiple price breaks, Stochastic models, demand may be discrete variable or continuous variable, Single period model and no setup cost.

MODULE - V

WAITING LINES, DYNAMIC PROGRAMMING AND SIMULATION

Classes: 09

Waiting Lines: Introduction, Terminology, Single Channel, Poisson arrivals and exponential service times with infinite population and finite population models, Multichannel, Poisson arrivals and exponential service times with infinite population. Dynamic Programming: Introduction, Terminology, Bellman's Principle of optimality, Applications of dynamic programming, shortest path problem, linear programming problem.

Simulation: Introduction, Definition, types of simulation models, steps involved in the simulation process - Advantages and Disadvantages, Application of Simulation to queuing and inventory.
