IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester) 2021

Course Code	Course Name	L-1, ST-4	Int. : Ext.	Duration of Exam
BARCH101-21	Architectural Design & Theory – 1	Credits - 05	60:40	06 Hours

Course Objective:

The main objective of the course is to get the students interested in and to familiarize them with the basic concepts of Design. To enhance and promote visualization, expressional skills and sensitivity to surrounding environment and to develop the ability to translate principle of design into architecture solution.

Course Outcomes:

At the end of the course, the students will able to-

- Understand & will gain a fundamental knowledge of architecture design and its basic principles.
- To apply visual and formal analysis of architecture in their mind and they will be able to appreciate well-designed buildings.
- Understand the skill required to interpret a work of architecture and to evaluate, identify and analyse artistic expression of architectural forms.
- Understand the relationship between human activities of Space.

Detailed Syllabus:

UNIT-I (Theory)

- Introduction to Basic Design
- Objectives of Design
- Elements of Design
- Principles of Design
- Scale and proportion in Architecture.
- Anthropometrics (including norms for physically challenged persons)
- Human functions and their interactions for space requirements.
- Minimum and optimum areas for various human activities & functions.

UNIT-II (Design Exercise & Application)

- 2D compositions with basic geometric shapes, colour, texture and pattern.
 - Experience in 3D Design, compositions with simple forms like cube, cuboids, cylinder, cone, prism etc.
 - Compositions with 3-D Solids.
- Note - Stress is given to 2D, 3D exercise (**Black & white and colours.**)
- Functional furniture layout, circulation as anthropometric/Activity pattern

UNIT-III

- Gazebo/ rain shelter/ Milk booth/Florist kiosk/ park layout etc...

Evaluation Criteria for Exam / Question Paper Setting:

The examiner will set five questions from Unit- I and two from Unit-III & students are required to attempt any three question from Unit-I and only one from Unit-III during the six hour examination. No question to be set from Unit- II

Important Note:

The evaluation is to be done through Viva - voce conducted at the institute level by Internal / External jury members appointed in consultation with the university from the appointed panel list of examiners. The answer sheet shall be retained at the institute after the exam for the viva voce.

Instructions for the Faculty:

Design faculty should encourage and motivate the students for live projects of their immediate surrounding. (Identifying need, Framing requirements and solution for the same and it should be marked as an assignment.)

The stress should be given on making students grasp the concept and do the design assignment as a creative fun activity.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester) 2021

Course Code	Course Name	L - 1, ST- 3	Int. : Ext.	Duration of Exam
BARCH102-21	Architectural Drawing –I	Credits - 04	60:40	03 Hours

Course Objective:

The objective is to make the students familiarize with good drafting and lettering techniques use in architecture. To gain the basic knowledge for preparing the architectural drawings by learning about the orthographic projections of simple geometric forms and representation of 3-D & 2-D forms.

Course Outcomes:

At the end of the course, the students will able to –

- Gain the comprehensive understanding of the fundamental techniques of technical drawing and its architectural representation.
- Attain the knowledge to visualize the geometrical forms through plans, elevations and sections.

Detailed Syllabus:

UNIT- I

- Drafting – Technique & its Principles
- Line - Types of Lines and Dimensioning of line
- Lettering - free hand & block lettering
- Scales – Different types of scale and its uses in the Architectural Drawing.

UNIT- II

- Orthographic Projections - Point, Lines, Plane and Solid in various positions in the First Quadrant.

UNIT- III

- Section of Solids- Cube, Cuboids, Cone, Cylinder, Pyramid, Prism etc.

UNIT- IV

- Development of Surfaces - Simple Geometrical Solids (Cube, Cuboids, Cone, Cylinder, Pyramid, Prismatic)
- Interpenetration of Solids

Instructions for the Faculty:

Emphasis should be laid on learning by doing and students have to be encouraged to make proper models to understand the geometry of forms.

Evaluation Criteria for Exam / Question Paper Setting:

Total eight questions are to be set (two questions from each unit) and the students are required to attempt total four questions (one from each unit).

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	L - 1, ST - 2	Int. : Ext.	Duration of Exam
BARCH103-21	Architectural Graphics –I	Credits - 03	60:40	03 Hours

Course Objective:

The objective is to make the students familiar with visual arts and its basic principles and to explore the potential of Pencil of different grades and Coloured pencils as a powerful tool of Graphic Communication.

Course Outcomes:

At the end of the course, the students will able to –

- Gain a fundamental knowledge of architecture Graphics and its principles.
- Achieved a comprehensive understanding of architectural presentation techniques.

Detailed Syllabus:

UNIT- I (Pencil as fundamental tool of drawing)

- Free hand line-work with different strokes/grades in pencil.
- Effect of light and shade on simple geometrical solids.
- Textures of different building materials (such as bricks, stones, grass, glass, timber etc.) in pencil through shading and surface finishes of wall and floor.
- B/W Composition by using different geometric forms with charcoal pencil.

UNIT- II (Pencil as presentation medium)

- Freehand (proportionate) sketching of human figures, different types of vegetation, different transport modes and buildings etc.
- Indoor and outdoor furniture/antique items & Staircase-shading/role with light
- Sketches of scenes and activities from memory involving public spaces, markets, festivals, recreational spaces etc.
- Live sketching – indoor and outdoor area

UNIT-III (Rendering with coloured pencils/crayons/dry pastels)

- Colour rendering of human figures, different types of vegetation, different transport modes and buildings etc.
- Colour Rendering of various scenes such as Garden/Park Scene, Street Scene, Lake Scene, Village/Market Scene, etc.
- Live sketching – indoor and outdoor area
- Role of light in rendering co-relation with different shapes of geometry and some building elements.

UNIT-IV (Art & Illusion)

- Different exercises involving Logo Design, Collage making etc.
- Mural and Sculpture design in different materials like POP, Clay, ceramic/Mosaic etc.

Instructions for the Faculty:

- Workshops related to above stated units should be organised, highlighting its technique and style which can be organised indoor or outdoor. The students must be encouraged to appreciate the natural/man-made landscape and to understand the interrelationship of nature and architecture. Emphasis should be on enhancing the observation skills & aesthetics sensibility of the students.

Evaluation Criteria for Exam / Question Paper Setting:

Total four questions are to be set from all the units and students are required to attempt all the questions.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	P - 2	Int. : Ext.	Duration of Exam
BARCH104-21	Workshop – I	Credits - 01	100:0	No exam only Internal viva-voce

Course Objective:

The student will gain basic hands on experience and fundamental knowledge in carpentry, brick masonry and model making.

Course Outcomes:

At the end of the course, the students will able to –

- Gain the basics knowledge of the carpentry tools and its joints.
- Attain skill to work with different materials for making architectural model.

Detailed Syllabus:

UNIT-I 2D/ 3D composition

- Exercise in 2-D compositions (formal, informal, abstract or modern etc.)
- Block making of 3-D geometrical blocks (by choosing different forms and different materials).
- Soap carving for creating three dimensional forms in space

UNIT-II Carpentry

- Carpentry – Introduction to the types, use of carpentry Tools and various joints in Carpentry.

UNIT-III Model Making

- Model Making—making of different types of trees and other landscape elements like street lamps, pathways, plantation, water-bodies and different types of automobiles.
- Preparation of wooden base for model making.

UNIT-IV Masonry Construction

- Brick/Stone Masonry – Low height wall construction by using either bricks or stones for the understanding of various bonds, jallies etc.

Instructions for the Faculty:

- The Faculty is required to give a complete demonstration of brick work, stone work, textured & timber work and other various exterior finishes through audio-visual aids or through site visits.

Evaluation Criteria for Exam / Question Paper Setting:

In the end of the semester internal jury Viva-voce to be conducted (the jury comprises of the subject incharge and the HOD nominee)

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same In the department library, on

web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

Prasanna

Jyoti

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	L-1, ST-3	Int. : Ext.	Duration of Exam
BARCH105-21	Building Construction & Materials - Credits - 04 I	60:40	03 Hours	

Course Objective:

- The objective is to introduce the elementary building materials and their applications. To familiarize students with construction details of various basic components of construction.

Course Outcomes:

At the end of the course, the students will be able to –

- Understand the properties, types, uses and application of various building materials i.e. brick, lime, cement, mortar, sand, stones etc.
- Gain the fundamental knowledge of building Construction especially in brick and stone.

Detailed Syllabus (This subject consists of two Parts)

Part A: Building Materials

UNIT-I (Brick As A Construction Material)

- Brief introduction to mud, sand, clay, surkhi, aggregates, lime and cement etc.
- Different types of mortar like mud mortar, lime mortar, cement mortar etc.- their properties and uses
- Classification & types, uses, sizes and properties of bricks
- Cost-effective bricks, AAC blocks, Fly-ash bricks etc. – their properties and uses in construction industry.

UNIT-II (Stone As A Construction Material)

- Classification & types, uses, sizes and properties of Stone available in India
- Stone – dressing, and deterioration and preservation measures.
- Application properties and visual check for different types of stone.
- Properties and uses of artificial stone.

Part B: Building Construction

UNIT-III (Brick masonry)

- Introduction to various components of a building (sub-structure to super-structure), their structural and functional roles.
- Brick masonry –different types of bonds (English, Flemish, Rat trap, etc.) and junctions (L-junctions, T-Junctions, cross junction) of varying wall thickness (not more than 2 brick thick).
- Attached and detached brick Piers of varying thickness (~~not more than 3' 0"~~)
- Brick jalli-design and construction details

UNIT-IV (Stone masonry)

- Stone masonry of various types
- Lintels and sill level details
- Coping and threshold details.
- Arches-Flat, Segmental and Semi-circular

Instructions for the Faculty:

- The assigned Faculty is advised to undertake 2-3 site visits for better understanding of Brick/Stone bonds, Brick Jalli and different types of exterior finishes. Faculty is advised to read the preamble of the syllabus carefully.

Evaluation Criteria for Exam / Question Paper Setting:

Total eight questions are to be set two from each unit & students are required to attempt total four questions i.e. one from each unit. The distribution of marks for **Part A** (Unit I&II): **Part B** (Unit III&IV) is 12: 28 marks.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same In the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	L-2, T-1	Int. : Ext.	Duration of Exam
BARCH106-21	Theory of Structures - I	Credits - 03	40:60	03 Hours

Course Objective

Give introduction of basic principles governing structural systems. Make students understand basic properties of solids and sections, which influence their behaviour under the effect of various types of forces.

Course Outcomes:

At the end of the course, the students will able to –

1. Develop techniques for analysing forces in statically determinate structures.
2. Apply basic knowledge of Maths and Physics to solve real life problems related to structures.
3. Describe Hooke's law relationships and perform calculations

Detailed Syllabus:

UNIT I

- Various types of Gravitational and Lateral Loads (I.S. 875) such as Dead, Live, Wind, Earthquake etc.
- Type of Forces, Cause- Effect, Concurrent Forces, Coplanar Forces and Parallel Forces. Triangle Law of Forces, Parallelogram Law of Forces, Equilibrium of Forces, Concept of Resultant, Conditions of Equilibrium.
- Centre of Gravity, Definition, Centroid, Centre of Gravity of Plane Figures, Moment of Inertia; Radius of Gyration of simple cross-section of beams and columns, Theorem of Parallel and Perpendicular Areas.

UNIT II

- Classification of Frames, Type of stresses and strains, Analysis of determinate trusses by Method of Joints, Design examples.

UNIT III

- Moment of Resistance, Theory of Bending, Bending Stresses, Sectional Modulus of Rectangular and Circular Sections, bending and shear stress distribution across a section.

UNIT IV

- Types of Stresses & Strains, Hooke's law, Young Modulus, Shear Modulus, Bulk Modulus.

Instructions for the Faculty –

The student of architecture must be clear about the Basic structure design concepts.

Evaluation Criteria for Examination/ Question Paper Setting:

The examiner is required to set eight questions with minimum two from each unit. Students are required to attempt five questions with a minimum one from each unit.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	2 - L	Int. : Ext.	Duration of Exam
BTHU101-18	Communicative English	Credit - 2	40:60	03 Hours

Course Objective:

The student will gain basic hands on experience and fundamental knowledge English and become the independent users of English Language.

Course Outcomes:

At the end of the course, the students will able to –

- Have proficiency in reading & listening, comprehension, writing and speaking skills.
- Understand spoken and written English language, particularly the language of their *chosen technical field*.
- Converse fluently.
- Produce clear and coherent texts on their own.

Detailed Syllabus:

UNIT-I Vocabulary Building & Basic Writing Skills

- The concept of Word Formation
- Root words from foreign languages and their use in English
- Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives.
- Synonyms, antonyms, and standard abbreviations.
- Sentence Structures
- Use of phrases and clauses in sentences
- Importance of proper punctuation
- Creating coherence
- Organizing principles of paragraphs in documents
- Techniques for writing precisely

UNIT-II Identifying Common Errors in Writing

- Subject-verb agreement
- Noun-pronoun agreement
- Misplaced modifiers
- Articles
- Prepositions
- Redundancies
- Clichés

UNIT-III Mechanics of Writing

- Writing introduction and conclusion
- Describing
- Defining

- Classifying
- Providing examples or evidence

UNIT-IV Writing Practices

- Comprehension
- Précis Writing
- Essay Writing
- Business Writing-Business letters, Business Emails, Report Writing, Resume/CV, Architectural Report Writing

Evaluation Criteria for Exam Question Paper Setting:

One objective type compulsory question to be set covering the entire syllabus in addition to eight others (two from each unit). The students are required attempting total 05 questions i.e. compulsory question and one from other from each unit.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	P-2	Int : Ext	Duration of Exam
BTHU102-18	Communicative Skill Laboratory	Credit - 1	100:0	No exam only Internal viva-voce

Course Objective:

The objective of the course is to help the students become the independent users of English language.

Course Outcomes:

At the end of the course, the students will able to –

- Students will acquire basic proficiency in listening and speaking skills.
- Students will be able to understand spoken English language, particularly the language of their chosen technical field.
- They will be able to converse fluently
- They will be able to produce on their own clear and coherent texts.

Detailed Syllabus:

Interactive practice sessions in Language Lab on Oral Communication:

- Listening Comprehension
- Self-Introduction, Group Discussion and Role Play
- Common Everyday Situations: Conversations and Dialogues
- Communication at Workplace
- Interviews
- Formal Presentations

Instructions for the Faculty:

- The available software/ language lab must be put to use by the students.

Evaluation Criteria for Exam / Question Paper Setting:

In the end of the semester internal jury Viva-voce to be conducted (the jury comprises of the subject incharge and the HOD nominee)

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same In the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	L-2	Int : Ext	Duration of Exam
HSMC122-18	Human Values and Professional Ethics	Credits - 2	40:60	03 Hours

Course Outcomes:

To help the students to discriminate between valuable and superficial in the life. To help develop the critical ability to distinguish between essence and form, or between what is of value and what is superficial, in life - this ability is to be developed not for a narrow area or field of study, but for everyday situations in life, covering the widest possible canvas. To help students develop sensitivity and awareness; leading to commitment and courage to act on their own belief. It is not sufficient to develop the discrimination ability, it is important to act on such discrimination in a given situation. Knowingly or unknowingly, our education system has focused on the skill aspects (learning and doing) - it concentrates on providing to its students the skills to do things. In other words, it concentrates on providing "How to do" things. The aspects of understanding "What to do" or "Why something should be done" is assumed. No significant cogent material on understanding is included as a part of the curriculum. A result of this is the production of graduates who tend to join into a blind race for wealth, position and jobs. Often it leads to misuse of the skills; and confusion and wealth that breeds chaos in family, problems in society, and imbalance in nature. This course is an effort to fulfill our responsibility to provide our students this significant input about understanding. This course encourages students to discover what they consider valuable. Accordingly, they should be able to discriminate between valuable and the superficial in real situations in their life.

MODULE 1. Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

1. Purpose and motivation for the course, recapitulation from Universal Human Values-I
2. Self-Exploration—what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration.
3. Continuous Happiness and Prosperity- A look at basic Human Aspirations
4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority
5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario.
6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and coexistence) rather than as arbitrariness in choice based on liking-disliking

MODULE 2. Understanding Harmony in the Human Being - Harmony in Myself!

7. Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
8. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility

9. Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)
10. Understanding the characteristics and activities of 'I' and harmony in 'I'
11. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail
12. Programs to ensure Sanyam and Health.

Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease.

MODULE 3: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

13. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship.
14. Understanding the meaning of Trust; Difference between intention and competence
15. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.
16. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.
17. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.

Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

MODULE 4: Understanding Harmony in the Nature and Existence - Whole existence as Coexistence

18. Understanding the harmony in the Nature
19. Interconnectedness and mutual fulfilment among the four orders of nature - recyclability and self-regulation in nature
20. Understanding Existence as Co-existence of mutually interacting units in all pervasive space
21. Holistic perception of harmony at all levels of existence.

Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

MODULE 5: Implications of the above Holistic Understanding of Harmony on Professional Ethics

22. Natural acceptance of human values
23. Definitiveness of Ethical Human Conduct
24. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
25. Competence in professional ethics:
 - a. Ability to utilize the professional competence for augmenting universal human order
 - b. Ability to identify the scope and characteristics of people friendly and eco -friendly production systems,
 - c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
26. Case studies of typical holistic technologies, management models and production systems.
27. Strategy for transition from the present state to Universal Human Order:
 - a. At the level of individual: as socially and ecologically responsible architects, engineers, technologists and managers
 - b. At the level of society: as mutually enriching institutions and organizations.

28. Sum up.

Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions eg. to discuss the conduct as an engineer or scientist etc.

READINGS:

Text Book

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010.

Reference Books

1. Jeevan Vidya: EkParichaya, A. Nagaraj, Jeevan VidyaPrakashan, Amarkantak, 1999.

2. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.

3. The Story of Stuff (Book).

4. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi

5. Small is Beautiful - E. F Schumacher.

6. Slow is Beautiful - Cecile Andrews

7. Economy of Permanence - J CKumarappa

8. Bharat Mein Angreji Raj -PanditSunderlal

9. Rediscovering India - by Dharampal

10. Hind Swaraj or Indian Home Rule - by Mohandas K. Gandhi

11. India Wins Freedom - Maulana Abdul Kalam Azad

12. Vivekananda - Romain Rolland (English)

13. Gandhi - Romain Rolland (English)

OUTCOME OF THE COURSE:

By the end of the course, students are expected to become more aware of themselves, and their surroundings (family, society, nature); they would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they have understood (human values, human relationship and human society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction. This is only an introductory foundational input. It would be desirable to follow it up by a) Faculty -student or mentor-mentee programs throughout their time with the institution. b) Higher level courses on human values in every aspect of living. E.g. as a professional

Evaluation Criteria for Exam / Question Paper Setting:-

One objective type compulsory question to be set covering the entire syllabus in addition to ten others (two from each unit). The students are required attempting total 06 questions i.e. compulsory question and one from other from each unit.

Core References

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. Bachelor of Architecture (B. Arch. 1st Semester)

Course Code	Course Name	L-1	Int. : Ext.	Duration of Exam
BARCH108-21	Life skills	Non - Credits	S/US	Non Credit

Course Objective:

To enable students to cope with challenges of today's world and live a life which is socially and emotionally enriching.

Course Outcomes:

At the end of the course, the students will be able to develop an awareness of the self and apply well-defined techniques to cope with emotions and stress. Use appropriate thinking and problem solving techniques to solve new problems

Detailed Syllabus:

UNIT- I

Decision Making

UNIT- II

Critical thinking /lateral thinking

UNIT- III

Communication and Interpersonal skills

UNIT- IV

Self-awareness and empathy, Coping with emotions and stress

Instructions for the Faculty:

Read the preamble of the syllabus & take utmost care to discuss life issues with budding architects.

	Total		8	2	6	12			25	

*NOTE: Educational Tour of 1-2 week duration during or after the first year of studies must be undertaken and Summer Training/ Vacation assignment to be given based on BARCH-211/21. The marking of the same will done in the third semester BARCH-310/21

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L-1, Stu-4	Int. : Ext	Duration of Exam
BARCH-201/21	Architectural Design - II	Credits - 5	60:40	06 Hours + Ext viva-voce

Course Objective

Understand the Architectural design of a small building with reference to function, form and structures.

Course Outcomes - At the end of the course, the students will be able to:

Develop a basic understanding of function, form, structure in the design of small structures. Understand & gain a fundamental knowledge of the architecture design process and its principles.

Detailed Syllabus

UNIT-I

Design of small buildings - Security check post, Bus Queue Shelter, Kiosk cum Cafes, etc. (involving circulation, form structure, and function)

UNIT-II

Architect's Office, Doctor's Clinic, Lawyer office & such similar projects of small scale (Cycle stand, E-Rickshaw stand, Taxi stand & Parking layouts, etc.)

Minimum 2 -5 exercises to be taken. (01 major, 02 minor and 02 as time problem)

NOTE - All buildings should have accessibility to the physically challenged persons as per SC guidelines.

Instructions for the Faculty –

The Basic methodology of teaching should be based on

- Library study to understand the basic functions of building and anthropometry.
- Case Study to understand the similar buildings in similar context.
- The emphasis of design should be on the space organisation and built form.
- Stress should be given to new thoughts/ innovation in design.

Design faculty should encourage and motivate the students for live projects of their immediate surroundings.

Evaluation Criteria for Examination/ Question Paper Setting:

One compulsory question is to be set from the entire syllabus.

The answer sheet shall be retained at the institute after the exam for conduct of the viva voce which will be conducted at the institute level by Internal / External jury members appointed in consultation with the university from the approved panel list of examiners.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L-1, ST-3,	Int. :Ext.	Duration of Exam
BARCH-202/21	Architectural Drawing - II	Credits - 4	60:40	03 Hours

Course Objective

To make students learn the techniques to represent different objects through 3-D and developing skill for visualization of 3-D forms through isometric/axonometric views, perspective and sociography to enhance the designing skills.

Course Outcomes- At the end of the course, the students will be able to:

- Understand the fundamental techniques of technical drawing used in 3-D.
- Analyse the 3-dimensional drawings of the building with Sociography.

Detailed Syllabus

UNIT-I (Isometric/ Axonometric projections)

- Principle of Isometric projection, Isometric grid and Scale.
- Isometric /Axonometric Views of simple/complex forms.
- Fundamentals of Sociography (point, line, plane, solids etc.)
- Sociography in Plans and Elevations

UNIT-II (Perspective Drawing)

- Introduction to theory of Geometrical Perspective Drawing.
- Angular (Two Point Perspective) and Parallel (One Point Perspective)
- Perspective of different Solids and Building elements
- Sociography in Perspectives (both one point & two-point perspectives)
- Perspective of one design problem being done in semester with sociography.

Instructions for the Faculty

- The Faculty is required to give maximum examples of the perspective view to enable the students to draw the views by using thumb rules.
- Emphasis should be laid on learning by doing and students have to be encouraged to make proper models to understand the geometry of forms.

Evaluation Criteria for Examination/ Question Paper Setting:

Total four questions are to be set, two from each unit & students are required to attempt a total of two questions i.e. one from each unit. The distribution of marks for unit I: Unit II is 15: 25 marks

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L-1 , ST-2	Int. : Ext.	Duration of Exam
BARCH-203/21	Architectural Graphics - II	Credits-3	60 : 40	03 Hours

Course Objective

The objective of the course in Architectural Graphics is to make the students familiar with the basic potential of Pencil and colours as a powerful tool of Graphic Communication.

Course Outcomes - At the end of the course, the students will be able to:

- Gain a fundamental knowledge of architecture Graphics and its principles.
- Attain the knowledge about the role of colours in presentation drawing and rendering techniques used in architectural design.

Detailed Syllabus

UNIT-I (Poster Colours as an effective presentation tool and its use in architecture design)

- Colour theory, Understanding colour value and intensity
- Colour Wheel showing Primary, Secondary and Tertiary colours.
- Colour Schemes & Charts showing Tints and Shades of various colours.
- Effect of colours in relief compositions.

UNIT-II

(Oil Pastels, Charcoal and watercolours as presentation medium)

- Representation of different textures in colour (brick, stone, timber, marble, glass etc.)
- Outdoor/indoor sketching of buildings, huts, group of trees, different kinds of trees/shrubs/grass with varying foliage in colours
- Colour rendering of blocks/geometrical forms, human figures, different types of vegetation, different transport modes and buildings etc.
- Rendering of drawings (Plan, elevation, 3-D views) in oil pastels and water coloured medium of one design problem being done in semester in any one medium.

Instructions for the Faculty

- Workshops related to colour rendering will also be organised, highlighting its technique and style which can be organised indoor or outdoor. The students must be encouraged to appreciate the natural/man-made landscape and to understand the interrelationship of nature and architecture.

Evaluation Criteria for Examination/ Question Paper Setting:

Total four questions are to be set, two from each unit & students are required to attempt one from each unit.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L -2, T - 1	Int. : Ext.	Duration of Exam
BARCH-204/21	History of Architecture - I	Credits - 03	40:60	03 Hours

Course Objective

To appreciate the constraints in the Architectural design of an ancient building with reference to its function, form and structures. To make students understand how different Architectural solutions were evolved (in successive historic periods) within the limitations imposed by prevalent social and religious customs, available building materials, climate of region/topography, complex structural problems and the limited technology available at that time period.

Course Outcomes: At the end of the course, the students will be able to –

- Developing a holistic approach to architecture is an integral component of the built environment.
- Develop an understanding of architecture as an outcome of various social, political and economic influences and as a response to the cultural and climate conditions.
- Understand the physical experience of buildings in order to appreciate the complexity of the physical and metaphysical influences bearing on architecture.

Detailed Syllabus

UNIT-I

- Introduction, Definition and scope & importance of History of Architecture - Man's early/ prehistoric attempts to colonise and personalise space by taking the examples of early shelters, Stonehenge, tumuli etc. As an expression of man's physical and spiritual needs.
- Introduction to the river valley civilizations- the Origin and the Form of the civilization.
- Architecture and town planning of Harappan civilization such as towns of Lothal, Mohenjo- Daro, Dholavira, Kalibanga etc.

UNIT-II

- Understanding of Vedic architecture, and settlements.
The Vedic village-Building typology and its construction details.
- **Buddhist Art and Architecture:** Beginning & origin of Buddhist architecture and the important Socio-political factors in selection of sites. Architectural examples of Mahayana and Hinayana Buddhism; Rock-cut and free standing. Study of caves, stupas, and viharas of places like Sanchi, Amravati, Karle, Ajanta etc.

UNIT-III

Introduction to architecture and planning of river valley civilizations of ancient Egypt, Mesopotamia. Study of palace, hypostyle hall, temple, tomb architecture.

Nile Valley Civilization

Salient building types: (Egyptian)

- Mastabas – development and typical components
- Pyramids –development and typical components , Complex of Zoser, Pyramid of Cheops and Cephren, Standard mortuary complex layout of pyramids
- Temples & temple complexes - Cult Temple and Mortuary Temple

Mesopotamian civilization

Salient building types : (Mesopotamian)

- Ziggurats and their development – White Temple, Ziggurat of Ur, Ur Nammu and Khorsabad
- Generic Temple Layout - Temple Oval and Khafaje
- Palace Complex/Citadel of Khorsabad

UNIT-IV

Introduction to architecture and planning of ancient Greece and Rome. Study of principles of design, proportion, optical corrections and classical orders.

- a) **Greek Architecture:-** Classical Order – Doric, Ionic, Corinthian
Salient building types:
- Temple types on basis of column layout – case example of Acropolis, Athens
 - Public Buildings and Square – Agora, Stoa, Theatres
- b) **Roman Architecture:-** Contribution in new materials and new construction/structural systems, eg, Pozzolana, Cementae, Stone Blocks, Stone Masonry, Arch, Vault, Dome.

Salient buildings types:-

Pantheon, Colosseum, Bath of Caracalla, Basilica of Trajan, Forums of Rome, Aqueduct

Instructions for the Faculty:

- The Faculty is advised to consider limited examples (not more than 05) of each type of Architecture emphasizing on the analysis of architecture style/building typology must include the functional, constructional/structural and ornamentation aspects.
- Educational trip will be organised to impart practical knowledge of the content.

Evaluation Criteria for Exam / Question Paper Setting: -

The examiner is required to set eight questions with minimum two from each unit. Students are required to attempt five questions with a minimum one from each unit.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	P - 2	Int. : Ext.	Duration of Exam
BARCH-205/21	Workshop - II	Credits-01	100	No Exam only Internal Viva-voce

Course Objective

The student will gain basic hands on experience and fundamental knowledge in model making, sculpture and clay modelling.

Course Outcomes: At the end of the course, the students will able to--

- Proficiency in handling clay as a material.
- Acquire skills in different types of architectural model making using various materials and get hold of skill in sculpture making in various mediums.

Detailed Syllabus

UNIT-I (Clay & Sculpture)

- Clay Modelling, Pinching, Coiling Techniques Slab Techniques
- Sculptures in Plaster of Paris, Wires, Scrap, Wood, Ceramic tiles etc.

UNIT-II (Product design)

- Design & Model Making of Furniture, Lamp shades and other Interior & Exterior Elements.

UNIT-III (Model Making in paper, cardboard and mount board)

- Prepare block model of the design project introduced in the semester along with site plan details such as parking area, green areas and landscape techniques etc.
- To prepare a detailed model of mixed materials for a major design project of one design problem being done in semester.

Instructions for the Faculty

- The Faculty is required to organize one or two Sculpture/Mural workshops to enable the students to understand the concept of “learning by doing”.

Evaluation Criteria for Examination/Question Paper Setting

In the end of the semester internal jury Viva-voce to be conducted (the jury comprises of the subject incharge and the HoD nominee)

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L-1, ST-3,	Int. :Ext.	Duration of Exam
BARCH-206/21	Building Construction & Materials - II	Credits-4	60:40	03 Hours

Course Objective

The main objective is to introduce the properties of timber as building material and to familiarize the students with traditional construction methods of a single storeyed building-in timber with sloping roofs-

Course Outcomes: At the end of the course, the students will be able to-

- Comprehend timber as a building material and its application in building components and gain knowledge on construction of Door, window, roof made out of it.
- Understand various surface finishes for single storey building and the fundamental knowledge for water proofing details in simple structures.

Detailed Syllabus (This subject consists of two Parts)

Part A: Building Materials

UNIT-I (Materials)

- Timber: Sources of timber, its classification & characteristics, defects of Timber, different Preservation and treatment measures and Uses of Timber in building construction.
- Industrial timber products and their applications-plywood, particleboard, laminated board, block board and batten board etc.

UNIT – II (Waterproofing and Surface finishes)

- Water proofing: - Water proofing materials (liquid, semi liquid and solid) – Composition, Properties, Applications.
- Surface finishes: -White wash, Distemper, Paints and Varnishes- Types, Applications, Suitability, Advantages and Disadvantages.

Part B: Building Construction

UNIT – III (Doors & Windows)

- Doors -Types of Doors, Design and construction details of Framed, Ledged, Braced & Battened Door, Flush Door, and Wire mesh Door, Panelled Door etc. (considering different types of Joints and Joinery details)
- Windows - Types of Windows, Design and Construction details of Casement, Bay, Clearstory, Corner window Dormer window etc. (considering different types of Joints and Joinery details)

UNIT – IV (Foundation, Walls and Roofs)

- Foundation – introduction and importance of foundations, Types of Foundations (brick and stone) and their design considerations for load bearing structures.
- Damp proof course – introduction and types of D.P.C., laying and maintenance of D.P.C. layers Roofs - Construction of R.B.C. roof, Jack Arch Roof, Tiled and Battened Roof and concepts of water proofing & Thermal Insulation of roofs.
- Section through a single storey building covering the foundation, D.P.C. layer, window with sill and lintel level, roof and wall junction, roof insulations and parapet wall details.
- Walls- various types of timber frame walls with details of joints and cladding
- Dhajji wall construction
- Foundation of timber post

Instructions to the Faculty

- The faculty should encourage the students to visit the construction site/conduct market survey w.r.t. the topics covered in the class.
- Audio-visual lectures should be presented.

Evaluation Criteria for Examination/ Question Paper Setting:

Total eight questions are to be set, two from each unit & students are required to attempt a total of four questions i.e. one from each unit. The distribution of marks for **Part A** (Unit I&II): **Part B** (Unit III & IV) is 12: 28 marks.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University
Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L-1 T-1	Int. : Ext.	Duration of Exam
BARCH-207/21	Theory of Design - I	Credits -2	40:60	03 Hours

Course Objective

The objective is to establish the role and importance of Theory of Design as a broad, comprehensive activity to help students to formulate a responsible opinion and a well-reasoned judgement by looking at the design in depth and in a critical way.

Course Outcomes: At the end of the course, the students will able to-

- Develop a basic understanding of spatial organisation
- Learn about the inter-dependence of function, structure and form in architectural design. .

Detailed Syllabus

UNIT-I

- Primary Elements of Design such as Point, Line, Planes and Volume with building examples.
- Proportion, scale, balance, rhythm, symmetry, hierarchy, pattern, axis with building examples
- Formal Collision of Geometry and Articulation of Forms.

UNIT-II

- Organization of Form and Space.
- Spatial relationships; space within space, interlocking space, adjacent space, space linked by common space.; influencing factors for spatial organization and their types; centralized, linear, radial, clustered etc.

UNIT – III

- Analysis and classification: space usage & inter-relationship of different spaces within a building.
- Form defining Space with Horizontal Elements and Vertical Elements.
- Spatial Organization and Circulation Elements including Approach, Entrance, Configuration of the Path (Path- Space Relation, Form of the Circulation Space).

UNIT – IV

- Proportion and Scales, Proportion System, Visual Scale and Human scales, scalar comparison.
- Aesthetic principles in Indian and western cultures.

Instructions for the Faculty

- The Faculty is required to guide the students with building examples (taken from Indian/world architecture) to understand the necessary relationship between indoor and outdoor space in context to the theory of design and must encourage the students to do in depth study of design theory.
- Audio-visual lectures should be presented and the subject must be taught in coordination to site visits or study tour for topics relating to theory of form, space and basic architectural forms.

Evaluation Criteria for Examination/ Question Paper Setting:

The examiner is required to set eight questions with minimum two from each unit. Students are required to attempt five questions with a minimum one from each unit.

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. The Faculty is also advised to keep on updating the reference list and submit the latest one in the Library & Academic department of the Campus.

IK Gujral Punjab Technical University

Bachelor of Architecture (B. Arch. 2nd Semester)

Course Code	Course Name	L-1 P-2	Int. : Ext.	Duration of Exam
BARCH-208/21	Computer Applications - I	Credits -2	60:40	No Exam, only Ext. jury / Viva-Voce

Course Objective: To make students aware of the role and importance of Computers in the field of Architecture.

Course Outcomes: At the end of the course, the students will be able to understand basics of Computers hardware, operating systems and operative languages, being a fundamental course the students will be introduced to the basics of hardware and software. They will be introduced to 2D presentations.

Detailed Syllabus: - Being an advanced learning course, students will be introduced to 2D drawing and rendering techniques.

UNIT-I

- Introduction to MS Office tools (PowerPoint presentation, word file/excel etc.)-basic templates for creating text documents, editing, formatting, spelling/grammar check, dictionary and thesaurus, page layout, fonts, indentation, inserting tables and images, document review and annotation in software like MS Word.
- Image processing: basic image sourcing, editing and insertion for desktop publishing in Adobe Photoshop or similar software.

UNIT-II

- Basic commands like copy, paste, stretch, offset, move fillet, extend, trim and other 2D commands.
- Basic Text writing and dimensioning of the Plans, Elevation and Sections.
- Basic hatching and filling of the Walls in the Plans, Elevations and Sections.
- Understanding of unit settings, scale, limits, line type, line weight, layers, colours, and print commands.
- Simple exercises in to 2D CAD software (AutoCAD/Revit) specifically for proficiency of, drawing/editing objects, text, dimensioning, making and inserting blocks,
- Drawing the basic Plans, Sections, and Elevations
- Basic rendering in the Auto Cad and in other Software's in 2D..

Evaluation Criteria for Exam

The evaluation of students shall be based on practical conducted based on a specific problem given to know the student's understanding of the computers in the field of Architecture.

Instructions for the Faculty –

Emphasis should be laid on developing the skill of 2-D drafting on the Software's

Core References:

The assigned Faculty is required to provide updated references/E-resources related to the content of the subject by ensuring the availability of the same in the department library, on web portals/online i.e. E-learning. Course Code	Course Name	P/FW-2	Int. : Ext.	Duration of Exam
BARCH-209/21	Mentoring & Professional Development-I	Non-Credit	S/US	No Exam

Guidelines regarding Mentoring and Professional Development

The objective of mentoring will be development of

- Overall Personality
- Aptitude (Technical & General)
- General Awareness (Current Affairs & GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. class activities and outdoor activities for achieving the above suggestive list of activities to be conducted are:

Part A (Class Activities)

- Expert and video lectures
- Aptitude Test
- Group Discussions
- Quiz (Technical & General)
- Presentation by the Students
- Team Building Exercises

Part B (Outdoor Activities)

- Sports: NSS/NCC
- Society activities in various student chapters i.e. NASA, ISTE, SCIE, SAF, CSI, Various Clubs such as Cultural, Hobby, Adventure etc.

Evaluation shall be based on rubrics for Part A & B

Mentors faculty incharge shall maintain a proper record student wise of each activity conducted and the same shall be submitted to the department.

Course Objective: To make students understand and appreciate the constraints in the designing of a building of a small scale with reference to function and form and to create awareness about the role and Importance of physical factors in Architectural Design. Study of climatic conditions of the site and aesthetics along with spatial attributes like orientation, ventilation, adequate protection from natural elements, and human dimensions in various postures (in applied form), their relation to everyday utilities including table, chair, bed etc.							
UNIT-I: Single family user/ Small cluster user							
Design of House, Primary School, without urban regulatory controls with emphasis on environmental and local ecological issues.							
UNIT-II: Multiple user/Multiple Functions							
Design of Post Office, Health Centre/ Dispensary, Community Centre, Restaurant etc.							
Course Outcomes:							
At the end of the course, the students will able to understand the nuances of house, school, cafeteria and post office design. They will also be well versed with various physical factors of architecture design and is able to take design decisions by considering various aspects of designs.							
Teaching Methodology							
Minimum two projects/ assignments to be handled by the students individually. Library and prototype studies should be carried out for other projects in groups. Model and perspective should be made integral part of project presentation. Stress should be laid on the understanding the basics of process of design.							
Guidelines for Paper Setter							
One compulsory question is to be set from the entire syllabus.							
Evaluation Methodology							
- Evaluation is to be done through viva voce by external jury appointed by the college. - Answer sheets should be retained at college level for the viva voce examination. - The topic of the project is to be displayed on College / Institute Notice Board ten days in advance.

BARCH303-21	History of Architecture-II	3	0	40	60	3	03 Hours
Course Objective: To appreciate the constraints in the Architectural design of an ancient building with reference to its function, form and structures. To make students understand how different Architectural solutions were evolved (in successive historical period) within the limitations imposed by prevalent social and religious customs, available building materials, climate of region/topography, complex structural problems and the limited technology available at that time period.							
UNIT-I: Hindu Architecture							
Early Hindu Architecture: Hindu temple Architecture: Gupta Period (A.D.350-650), Chalukyan Architecture (A.D. 450-650), at Aihole, Badami and Pattadakal, Evolution of temple form, Rathas at Mahabalipuram, Dravidian Architecture: Development of Settlement pattern and worship places. Study of Worshipping places of Dravidian Architecture -Chalukyan Phase (A.D. 600-750), Pallava(A.D. 600-900), Choloas (A.D. 900-1150) Pandyas (A.D.1100-1350), Vijanagara (A.D.1350-1560) and Madurai (A.D.1600) etc.							
UNIT-II: Islamic Architecture							
Architecture of Imperial Style or Delhi Sultanate: Mosques, Tombs and secular buildings: The Qutb Complex: Quwwat-UI-Islam Mosque, Qutb-Minar, Tomb of Iltutmish, extensions and additions by Allaudinkhilji. Arhai Din Ka jhompra, Khirkee Masjid, Jamaat khana Masjid, Sultan Ghari, Tombs of Ghiyasuddin Tughlaq, Firoz Shah Tughlaq, Balban, SikanderLodhi. Firoz Shah Kotla							
UNIT-III: Islamic Architecture							
Architecture of Provisional Style: Advent of Islam and its influence in India leading to the Indo-Islamic Style. Evolution of the Mosque & the Tomb design of Jaunpur, Mandu, Sher Shah Suri at Sasaram. Ahmedabad.							
UNIT-IV: World Architecture							
Early Christian Architecture: Study of Architecture Characteristics and evolution of church form, building typology and building elements. Early Basilica of St. Peter Rome. Byzantine Architecture: Study of Architecture Characteristics and evolution of church form, building typology and building elements. Pendentive domes construction and church of Hagia Sophia and construction of arches Romanesque Architecture: Study of Architecture Characteristics of Romanesque Period mainly of Italy, France and Central Europe. Focusing evolution of church form, building typology and building elements. Pointed Arches, Criss Cross arches							
Course Outcomes:							
At the end of the course, the students will be able to developing a holistic approach to architecture as an integral component of the built environment. Develop an understanding of architecture as							

an outcome of various social, political and economic influences and as a response to the cultural and climate conditions. Understand the physical experience of buildings in order to appreciate the complexity of the physical and metaphysical influences bearing on architecture
Teaching Methodology
For each period, stress is to be laid on the Architectural character and elements of Architecture with only one or two representative examples to highlight these features. Emphasis should be laid on understating of evolution of buildings and form. Continuous evaluation shall be made of students work based on various models, assignments and sketching
Guidelines for Paper Setter
• One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each part and students would be required to attempt minimum one question from each part • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

BARCH304-21	Building Construction- III	1	3	60	40	4	04 Hours
Course Objective: To develop a fundamental understanding of basic building elements, their functions and behaviour under various condition with specific reference to brick masonry construction. To understand basic principles of R.C.C construction with respect to cantilever slab and staircase To introduce students to flooring and cladding details							
UNIT-I: Masonry Structure Double Story							
Section of a Double Storied Building: Section of a double storied building through Toilet and Stair case showing the details of Foundation, D.P.C, Floor, Window, Lintel, Chhajja, R.C.C Roof, Terrace and Parapet							
UNIT-II: Staircases-RCC							
Types of Staircases- RCC only : Design and detailing of RCC staircases. Various types of Staircases in RCC, simply supported and cantilever staircase. Form work and Railing details for RCC Staircase.							
UNIT-III: Form work and Shuttering							
R.C.C. Form work and Shuttering: R.C.C. Form work and Shuttering details for- Column square, round, rectangle and hexagon. RCC form work for Slab and Beam, Wall, Staircase and basement etc.							
UNIT-IV: Flooring and Cladding							
Flooring and Cladding: Construction of PCC, Terrazzo, (Cast-in-situ and tiles) and various types of Stone flooring, tile flooring and Contemporary floor must also be studied. Cladding of interior and exterior facades in various commonly used materials like tiles, stones,							
Course Outcomes:							
At the end of the course student will expand a basic knowledge about building elements and construction techniques of R.C.C. staircases, shuttering of Columns, Beams and slab in R.C.C. and also develop the understanding of flooring and cladding details.							
Teaching Methodology							
Site Study of scaffolding and shuttering is to be conducted. Emphasis should be laid on making students understand complete construction details of double-storied structure. Field visit to study the complete process of lying of reinforcement and concreting. Preparing Construction sheets on above topics							
Guidelines for Paper Setter							
- Two questions are to be set from each part and students would be required to attempt minimum one question from each part. - Students would be required to attempt four questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.							
Evaluation Methodology

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Tutorial	int	ext		
BARCH305-21	Structure Design - I	2	1	40	60	3	03 Hours
Course Objective: The aim and objective of the course on structure design-I is to get introduced to basic structural members in masonry and timber, to give knowledge of design of timber beams in buildings and to enable understanding of basic concepts of shear force and bending moment.							
UNIT-I: Masonry Foundation and Retaining wall							
<i>Design of Foundations in Masonry work--</i> Safe Bearing Capacity, Load on Foundations, Depth of Foundation, Rankine's formula, Footing Sections. <i>Design of Retaining Walls in Masonry--</i> Loads, Resultant Pressure, Stability of Structure, Middle Third Rule, Design examples.							
UNIT-II: Analysis of Frame							
Bending Moment/ Shear Force, Type of Supports, Loads and Beams, BM and SF diagram for Simply Supported Beams with Point Load and Uniformly Distributed Load--Design examples							
UNIT-III: Frame design							
Design of Simple Timber Beam, Bending Stress Check, Shear Check, Deflection Check, Bearing Check, Design examples with UDL and Concentrated load.							
UNIT-IV: Portal Frame							
Analysis of portal frame by slope deflection method (Non-sway)							
Course Outcomes:							
At the end of the course, the students will able to Design timber beams by applying codal provisions, Design Masonry foundation and retaining walls, Analyse indeterminate structures and to calculate shear force and bending moment in determinate structures.							
Teaching Methodology							
Structural design shall be supplemented by structural drawings.							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.							
Evaluation Methodology

		Lecture	Studio	int	ext		
BARCH306-21	Structure System -I	2	0	100	0	2	No Exam
Course Objective: To make students learn basics principles of structure systems with emphasis on learning by doing and making 3-D models to provide the student with different spatial experience.							
UNIT-I: Cellular Structure System, Cell as a natural unit of space, Cell transformation, Polygonal Cellular Systems leading to evolution of Geodesic Domes. Understanding the geometry of Platonic Solids and its duality in nature. Applications of Cellular System in Building.							
UNIT-II: Bulk Active Structure System Structure acting mainly through material bulk and continuity i.e. Bulk active structure system / structure systems in bending involving: Slabs (One way & Two way), Beams (Simply supported, Cantilever, Continuous, Vierendeel Girders), Columns, Grid (Skew & Square Grid)							
UNIT-III: Vector Active Structure System Structures acting mainly through Composition of Compression and Tension members such as, Space frames, Trusses (Timber & Steel), Domes (Ribbed & Geodesic)							
UNIT-IV: Application of Structure System in Architecture Application of platonic solids. Application of bulk and Vector active structure system in the building by making different models.							
Course Outcomes: At the end of the course, the students will be able to gain ability to comprehend the Design erection process and application of large span structures. To understand the need and importance of prefabricated components and structures as an alternative to cast in situ construction process. To understand the needs, requirements, and selection for various types of structures systems.							
Teaching Methodology Emphasis shall be on making students understand the principles and systems involved in various topics. The students should be made to Coordinate the fabrication of at least four models to demonstrate the various structural system. Students be encourage to visit Pragati Maidan & other Building centres in New Delhi for better exposure. Students be encourage to present a PPT on the topics assigned and submit its report for external evaluation.							
Guidelines for Paper Setter No Exam							
Evaluation Methodology Evaluation is through Internal Viva Voce of the work done by the student during the end of semester with internal faculty and HOD Architecture/Principal.

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Tutorial	int	ext		
BARCH307-21	Theory of Design- II	2	1	40	60	3	03 Hours
Course Objective: To understand different design processes and strategies that can be applied in Architecture and to introduce students the development in architecture with specific reference to form, technology and ornament							
UNIT-I: Pre industrial and Industrial revolution							
Pre industrial and Industrial revolution: Neo Classical and Pre-Industrial, Developments and building examples from Italy. Industrial Revolution and its impact on the development of new towns. e.g. Tony Garnier's Industrial city. Influence of new construction materials, industrial techniques and functional needs on building typology and architectural form through building examples.							
UNIT-II: Early modern movement and Art Nouveau							
Early modern movement and Art Nouveau: Advances in steel construction like the Great Exhibition. Modern Architecture up to Second World War. Development of the high-rise building. Chicago School of Architecture (1880-1910)- Dankmar Adler and Louis Sullivan. Art Nouveau Architecture (1890-1920) - Antoni Gaudi, Joseph Maria Olbrich. International style and expressionist.							
UNIT-III: Master Architects							
Walter Gropius : Philosophy and Buildings with Minimum 4- 5 famous works of different era Frank Lloyd Wright : Philosophy and Buildings with Minimum 4- 5 famous works of different era							
UNIT-IV: Master Architects							
Le- Corbusier India and abroad: Philosophy and Buildings Minimum 4- 5 famous works of different era. The works in India should be given preferences. Ludwig Mies van der Rohe: Philosophy and Buildings Minimum 4- 5 famous works of different era							
Course Outcomes:							
Student will able to understand the architecture as formal, stylistic and structural development.							
Teaching Methodology							
Study of Master Architect shall focus on his life, approach, philosophy and Architectural works including character and elements of Architecture developed with representative examples to highlight those features. Emphasis should be laid on understating of evolution of buildings and form. Continuous evaluation shall be made of students work based on various assignments and sketching.							
Guidelines for Paper Setter							
One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus.							

- Two questions are to be set from each part and student would be required to attempt minimum one question from each part.
- Student would be required to attempt five questions in all including compulsory question.
- Question paper is to be set covering entire syllabus by making parts and mixing the topics specially form Unit -III and Unit -IV.

Evaluation Methodology

BARCH308-21	Climate and Architecture- I	2	0	40	60	2	03 Hours
Course Objective: To acquaint the students and make them aware of the concept of climate as a significant determinant of built forms and to familiarize them with various climate control devices.							
UNIT-I: Introduction to Climatology							
Fundamentals of Climatology, Introduction to climatology, Importance of studying Building climatology, Elements of climate, Global climate factors, Interrelationship of climatic elements and Psychometric chart.							
UNIT-II: Thermal Comfort for Human							
Thermal Comfort, Definition and explanation of Thermal Comfort, Human Heat Balance and Physical Comfort, Relationship of Climatic Elements with Thermal Comfort, Thermal Stress Index, Bio-climatic Chart, Effective Temperature and Corrected Effective Temperature, Histogram with their uses, Wind Movement and Natural Ventilation.							
UNIT-III: Sun Path and Building orientation							
Movement of Sun, Understanding the movement of Sun, Solar Chart and its importance. Importance of understanding the optimum orientation of buildings and their forms in relation to Sun, Concept and Design of Shading Devices.							
UNIT-IV: Climatic Zones							
Climatic Zones, Tropics and its Climatic zones, Macro and Micro Climate (site climate). Role of Climate with respect to Shelter, Principles of Architectural Design and Study of various Indigenous Shelters in response to various design solutions of Climate Zones in the Tropical belt of India.							
Course Outcomes:							
At the end of the course, the students will able to understand climatology in Architecture as an important consideration.							
Teaching Methodology							
Emphasis should be given to understand the climate is affecting the various shelters and form.							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.

		Lecture	Practical	int	ext		
BARCH309-21	Computer Application-II	1	2	60	40	3	No exam. Internal Viva Voce.
Course Objective: The objective of the subject is to enable students to understand and apply Basic CAD skills to create simple and complex three dimensional objects and skill to render and animate the building models.							
UNIT-I: Creating Three Dimensional objects							
Introduction to computer aided 3d drafting. Understanding tool, command and basic set up for 3D. introduction to 3d modelling techniques and construction planes, drawing objects, 3D surfaces, setting up elevation thickness and use of dynamic projections. Application of various tool bars for three dimensional modelling. Creating and editing simple and complex geometric meshes, surfaces and solids with their combination etc.							
UNIT-II: 3D model of Buildings							
Understanding and converting plan elevation and section of drawing to three dimensional building model using 3 dimensional tools. Creating building models using building software's by orthographic projections.							
UNIT-III: Photorealistic rendering							
Making Models photorealistic using materials, lighting, textures, background, etc. creating new materials and environments attributes.							
UNIT-IV: Walk through of Interior / Exteriors							
Create Interiors walk through for small spaces such as bed room, office, etc. by adding scenes, furniture, textures, finishes, with lighting effects and camera angles. Create building exteriors walk through by adding scenes, trees, human figures, cars, sun light effects, and camera angles.							
Course Outcomes:							
At the end of the courses students should have capability to visualise the building Visualise the building and transform sketches from 2 dimensional CAD drawing to 3 dimensional building model and walk through.							
Teaching Methodology							
Making three dimensional photorealistic rendered architectural model for any one of the architectural design assignment completed in previous semester and to create walk through the same.							
Guidelines for Paper Setter							
No Exam							
Evaluation Methodology							
Internal Viva voce is conducted on the portfolio submission at the end of semester with the internal faculty and Head of Department/Principal

BARCH310-21	Summer Training-	-	-	50	0	s/ns no credit	No Exam
Course Objective: The training is compulsory and is for the orientation of the students of the B. Architecture so that they are aware of/can identify the industrial, departmental, environmental, societal and other issues that are a challenge in the society and develop the ability to find solutions.							
UNIT-I: Building Terminology							
Assignment on Building Terminology, to be covered as an assignment and submit the report.							
UNIT-II: Study of Single Dwelling House							
Making Building Layout Plans with measurements of any (Own) Existing House and making Layout of Ground Floor Plan, Layout of First Floor Plan, Kitchen Detail, Toilet Detail. Student can use auto cad or draw manually. Submit the drawing at the end of training.							
UNIT-III: Market Survey of Material							
Student shall do Market Survey for availability and rates of Construction materials available in the market along with samples. Submit the report at the end of training.							
UNIT-IV: Visit to BrickKiln.							
Visit to Construction Site, Study and Visit to Brick Kiln and submit the report.							
Course Outcomes:							
Teaching Methodology							
Four (04) weeks Institutional Summer Vacation Training after 2 nd semester is a compulsory. The students are required to maintain a daily dairy and submit it along with the “Problem formulation report”. Student falling short of 75% attendance criterion is required to repeat the training with next batch. Continuous evaluation to be done and proper record to be maintained.							
Guidelines for Paper Setter							
Evaluation Methodology							
The students need to submit a summary report along with sheets of the institutional training of Module I-II.A detailed report/ scrapbook of inventory and market survey done in Module III. The viva exam for the subject will be conducted along with the practical exams of the End-Semester Examination of Third Semester

BARCH401-21	Architectural Design - IV	1	5	60	40	6	06 Hours + Ext viva-voce
Course Objective: To make students appreciate the elements of vernacular/rural Architecture of a particular region of the state of Punjab and understand the role of vernacular/traditional in relative thermal comfort.							
UNIT-I: Rural Architecture of Local Area							
Study of Rural, Vernacular, Historical Settlements/buildings of distinct Architectural characteristics including detailing with physical planning, measured drawings and other related systems.							
UNIT-II: Multiple user/Multiple Functions							
Community Buildings Panchayat Ghar, Rural Dispensary or hostel Farmer's House, Village Dairy Farmhouses, Rural School, etc.							
Course Outcomes:							
At the end of the course, the students will able to Study Social and Physical environment and methods of construction in Vernacular/Rural Architecture, emerging out of the traditional way of life of the people in a given place with special reference to Punjab and understand the principles of design in vernacular/ traditional architecture w.r.t to thermal comfort, climate, and topography.							
Teaching Methodology							
Minimum two projects/ assignments to be handled by the students individually. Library and prototype studies should be carried out for other projects in groups. Model and perspective should be made integral part of project presentation. Stress should be laid on the understanding the basics of process of design. <i>Documentation of the project of village study or Vernacular budling to be present at the end of the semester.</i>							
Guidelines for Paper Setter							
One compulsory question is to be set from the entire syllabus, specially from vernacular/rural background.							
Evaluation Methodology							
- Evaluation is to be done through viva voce by external jury appointed by the college. - Answer sheets should be retained at college level for the viva voce examination. - The topic of the project is to be displayed on College / Institute Notice Board ten days in advance.

BARCH402-21	Building Construction- IV	1	3	60	40	4	04 Hours
Course Objective: To make students understand and appreciate, various methods of building construction in coordination with the building materials and science related to Timber construction. Students will gain knowledge on the various applications of the timber roof construction system and other timber construction.							
UNIT-I: Types of Roofs, Single and Double roofs							
Introduction to different types of Roofs: Principles and Construction of Single Roofs: Flat Roof, Single Lean-to roof, Double lean-to roof, Collar roof, Couple roofs. Detail of Gutters, Eaves, and Ridge Details with/without Soffit and Roof Covering. Principle and construction of Double Roofs in timber.							
UNIT-II: Triple Roofs							
Principles of Construction and Details of King Post and Queen Post roof Trusses with Gutters, Eaves, and Ridge Details with/without Soffit and Roof Covering							
UNIT-III: Built Up trusses							
Timber Built-up Trusses of various Spans of 6M, 7M, 9M, 10M and 12M.							
UNIT-IV: Special Purpose timber products							
Design and Details of special-purpose door – Sliding door, Sliding and folding door, Timber partition, glass block partition, timber panelling Timber Staircase-Design and Details, Dhajji Wall Construction							
Course Outcomes:							
At the end of the course student will be able to become aware of the timber roof covering and other timber product construction system. Understand details for trusses, staircases, sliding doors, sliding folding doors, partitions, panelling, work out and apply appropriate details for building construction of the same.							
Teaching Methodology							
Teaching in the subject shall be made combination of: Field/ Project visits-to study the uses of various materials in construction industry and process of lying. Roof Coverings, Staircases and Doors and Windows of timber. Preparing Construction plates. Visit to Forest Research Institute, Dehradun or similar placed institutions. Models of Trusses with roof coverings.							
Guidelines for Paper Setter							
- Two questions are to be set from each part and students would be required to attempt minimum one question from each part. - Students would be required to attempt four question in total. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.							
Evaluation Methodology

BARCH403-21	History of Architecture-III	2	1	40	60	3	03 Hours
Course Objective: To appreciate the constraints in the Architectural design of an ancient building with reference to its function, form and structures. To make students understand how different Architectural solutions were evolved (in successive historical period) within the limitations imposed by prevalent social and religious customs, available building materials, climate of region/topography, complex structural problems and the limited technology available at that time period.							
UNIT-I: Hindu Architecture							
Northern or Indo-Aryan Style: Orissa A.D. 800-1250 Orissian style temple, its parts, basic elements and development of temple, sun temple at Konark, Linga raja Temple, Mukteswar temple, Raja Rani temple of Orissa. Indo Aryan Gujarat 940-1300 Gujarat style temple, its parts basic elements and development of temple, Sun temple at Modhera, Gujarat							
UNIT-II: Hindu and Jain Architecture							
Northern Indo Aryan : Khajuraho A.D.950-1050 Khajuraho style temple its parts and development of temple, development of shikara, Khandariya Mahadev temple, Laxman temple and Khajuraho group of temple. Jain Architecture: introduction to Chaumukh temple, Chaumukh temple of Adinatha at Ranpur, Jodhpur, Jain temple at Mount. Abu.							
UNIT-III: Islamic Architecture							
Architecture of Mughal Period 1526 AD to 1707 AD: Architecture of Mughal period, Elements of Mosques, Mughal Architecture of Delhi, Agra and Fatehpur Sikri. Red fort Delhi, Jami masjid at Delhi, Humayun Tomb at Delhi, Fatehpur Sikri Palace, Jami Masjid at Fatehpur Sikri, Bulunad Darwaja at Fatehpur Sikri, Taj Mahal at Agra,							
UNIT-IV: World Architecture							
Gothic Architecture: Study of Architecture Characteristics and evolution of church form, building typology and building elements. Gothic in France,- Notre Dame church, Reims Cathedral, Gothic In central Europe and other area- Westminster Abbey. Gothic In Italy- Milan Cathedral, S. Marai Del Flore, Florence, Renaissance Architecture: Study of Architecture Characteristics and evolution of church form, building typology and building elements. Early Renaissance in Italy: Pazzi Chapel: Florence, S. Lorenzo, Florence, S. Andrea, Mantua, Palazzo Pitti, Florence, Palazzo Riccardi, Florence, Palazzo Strozzi, Florence, France, High renaissance and Mannerism:- S.Pietro in Montorio, Rome, St. Peter Rome, Villa Capra, The Capitol at Rome. Baroque and Rococo period- St. Peter Rome.							
Course Outcomes:							

At the end of the course, the students will be able to developing a holistic approach to architecture as an integral component of the built environment. Develop an understanding of architecture as an outcome of various social, political and economic influences and as a response to the cultural and climate conditions. Understand the physical experience of buildings in order to appreciate the complexity of the physical and metaphysical influences bearing on architecture
Teaching Methodology
For each period, stress is to be laid on the Architectural character and elements of Architecture with only one or two representative examples to highlight these features. Emphasis should be laid on understating of evolution of buildings and form. Continuous evaluation shall be made from students work based on various models, assignments and sketching
Guidelines for Paper Setter
• One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each part and students would be required to attempt minimum one question from each part • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

Course Objective: To make students learn basics principles of structure systems with emphasis on learning by doing and making 3-D models to provide the student with different spatial experience.							
UNIT-I: : Form Active Structure System							
Form Active Structural System: Definition and Spans, Structural System in Simple Stress Conditions: Cable Structures, Tents Structures, Pneumatics Structures, Arch Structures: Funicular Arch, Thrust Lattice.							
UNIT-II Surface Active Structure System							
Surface active Structure System: Definition and Spans, Plate Structures, Folded Plate Structures, Shells Structure: Cylindrical Shells, Dome Shells, Saddle Shells.							
UNIT-III: Vertical Active Structure System and Geometry Structure Form							
Vertical/Height Active Structure System: Definition, deformation and stabilizations, System of vertical load transfer, Typical Structural Forms, Elevation Geometries. Geometry Structure Forms: Folding and Flat Surfaces, Singly Curved Surfaces, Dome Surfaces, Saddle Surfaces.							
UNIT-IV: Application of Structure System in Architecture							
Application of Form Active, Surface Active, vertical active structure system and Geometrical Structure Form in the building by making different models.							
Course Outcomes:							
At the end of the course, the students will be able to gain ability to comprehend the Design erection process and application of large span structures. To understand the need and importance of prefabricated components and structures as an alternative to cast in situ construction process. To understand the needs, requirements, and selection for various types of structures systems.							
Teaching Methodology							
Emphasis shall be on making students understand the principles and systems involved in various topics. The students should be made to Coordinate the fabrication of at least four models to demonstrate the various structural system. Students be taken to Pragati Maidan & other Building centres in New Delhi for better exposure. Course Objective: The aim and objective of the course on structure design-II are to get introduced to the design of reinforced concrete structures and to make the building structurally safe.							
UNIT-I: Beams							
Design of Single Reinforced Beams, Doubly Reinforced Beams, Depth/ Thickness of Section Area of reinforcement, Shear Check, Shear Reinforcement, Introduction to Cantilever beam, T-Beams and L- Beams							
UNIT-II: Slabs							
Design of One-Way Slab, Depth/Thickness of Section Area of Reinforcement, Shear Check, I S 456 Code- provisions, Introduction to Two Way Slab, l_y/l_x ratio.							
UNIT-III: Column							
Design of Columns, Long /Short Columns, Basic Equation of Design, IS 456 Code Provisions, Section of Column, Longitudinal and Lateral Reinforcement.							
UNIT-IV: Footing							
Design of Isolated Square Footings, Consideration of Bending Moment, One Way Shear, and Two-Way Shear, Area of reinforcement							
Course Outcomes:							
At the end of the course, the students will able to – design RCC Beams, Slabs, Columns, and footings with different loads for one-story simple buildings.							
Teaching Methodology							
Structural design shall be supplemented by structural drawings.							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.							
Evaluation Methodology

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Studio	int	ext		
BARCH406-21	Building Services-I	2	0	40	60	2	03
Course Objective: To make students learn and understand the requirements of Building Services and their application to buildings with a focus on Water Supply, Drainage, and Sanitation.							
UNIT-I: Water Supply,							
Water- Role & Importance, Sources, Quality, Impurities, Water Supply- Introduction, Basic Principles, Systems of Water Supply, Water Storage – Systems, Capacity and Location, Calculation of Water consumption, Domestic, hot and cold water supply systems, Pipes materials- Size and their jointing details, Fittings- sanitary fittings like Ferrule, Stopcock, Bibcock, etc, Metering- Various kinds of Water Meters and connections.							
UNIT-II: Sanitation							
Sanitation- Role, Importance, Basic principles of disposal of waste from buildings, Dry and Wet Carriage Systems, Sanitary Fittings-- Washbasins, WC's, Bath Tubs, Sink, Urinals, Bidets, Flushing Cistern, Traps, etc. Various types of joints, Pipe materials- Size and their jointing details, Septic Tanks, Treatment Plants, Manholes, Chambers- Purpose, Location, Structure and Ventilation, Drainage Systems- Types, Advantages/Disadvantages -- separate, combined and partially combined systems, Stack system--One pipe and two pipe systems, Testing of Drains, Gradients-- Purpose and Principle for laying Drains and Sewers. Self -cleansing and non-scouring velocities, Size of Drain Pipes, and Materials used.							
UNIT-III: Stormwater Disposal							
Types of Roads-WBM (water-bound macadam) Road-Tar, Bitumen, Asphalt and RCC roads, Description and Suitability of Roads for Storm Water Drainage with Comparative Cost Analysis, Pavements- Types (Soil stabilized, Brick and Stone paving, interlock tiles), Use, Advantages/Disadvantages, Drainage- Sub- drains, Culverts, Ditches, Gutters, Drop inlets and Catch Basins, Rain Water Disposal for individual buildings. Rain Water Harvesting							
UNIT-IV: Services Drawing							
Preparation of the drawings/ layouts of the building services in the design project of 3 and 4 semesters by the student. Kitchen and bathroom layout must be highlighted.							
Course Outcomes:							
At the end of the course, the students will able to: Understand the terminology and basic principles of water supply, stormwater drainage, and sanitation. Understand water requirements in various types of buildings, types of water storage and distribution systems, sanitary & drainage system requirements, and their integration in architectural design. Understand the functions of various sanitary fittings and fixtures and be aware of the different types of materials and specifications of the same. Develop design skills for water supply and drainage systems in buildings and prepare architectural drainage layouts.							
Teaching Methodology							

Subject shall be taught through the combination of Guest Lectures, Field visits, Visits to the Project Sites, actual display of Fittings, Pipes, Joints used and by carrying out exercises in layout of simple drainage, systems for small buildings, Planning of Bathrooms and Lavatory Blocks in Domestic and Multi-storied buildings.

- Provision of Water Supply, Sewerage and Storm Water Disposal services shall be made integral part of the Design Studio Project.
- Site visit for STP.

Guidelines for Paper Setter
One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each part and student would be required to attempt minimum one question from each part. • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology
Market survey to be done for the materials available. The subject shall be taught through the combination of Guest Lectures, Field visits, Visits to the Project Sites, the actual display of Fittings, Pipes, Joints used, and by carrying out exercises in the layout of simple drainage systems for Small buildings, Planning of Bathrooms and Lavatory Blocks in Domestic and Multi-storied buildings Exercises shall be clubbed with Design Studio Project.

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Tutorial	int	ext		
BARCH407-21	Climate and Architecture -II	2	0	40	60	2	03 Hours
Course Objective: : To acquaint the students and make them aware of the concept of climate as a significant determinant of built forms and to familiarize them with various climate control devices							
UNIT-I: Ventilation in Buildings							
Ventilation - Introduction and its mechanism, Wind Movement, Air movement within and around buildings, effect of surrounding elements and pattern of wind flow, Guidelines for designing well ventilated buildings, Optimum Orientation of Building—Importance, Form and Placement of Building.							
UNIT-II: Solar Radiation							
Introduction to basic Thermal Units, Theory of Heat Flow, Heat Transmission etc. Thermal Properties of various Building Materials, Solar Radiations- Movement of Sun, Method of Recording, Radiation Gains by various Materials, Study of various Landscape Elements and Solar Passive Devices for Climatic Control within Buildings.							
UNIT-III: Sustainability and Energy conservation							
Sustainability - Concept, Definition, Importance and Scope , Sustainable Buildings- Concept, Importance, Approach ,Design Principles and Advantages, Introduction to ECBC Codes, Introduction to GRIHA. Introduction to Energy Demand and Consumptions. Energy Saving Technique in Buildings. Alternate Energy Sources in India. Introduction of energy software's.							
UNIT-IV: Sustainable development and Software's for energy conservation and sustainable development.							
Introduction to Ecotec and Design Builder Software, Sustainable Development- Introduction, definitions, objectives and scope, Man and Environment- Introduction, issues and options, Human Settlements- Planning, Growth, Development, Problems, Global warming – Introduction, Causes, Effects and Remedies, Carbon Credits., Architect-Role in Sustainable Development.							
Course Outcomes:							
At the end of the course, the students will able to understand climatology in Architecture as an important consideration.							
Teaching Methodology							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics specially from Unit -III and Unit -IV.

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Practical	int	ext		
BARCH408-21	Building Materials-I	2	0	40	60	2	3 Hours
Course Objective: To make students understand and appreciate the building materials and science related to them. Students will gain knowledge on the various applications of the roof covering materials, timber, Natural and commercial, floor coverings, Glass and PVC in building construction.							
UNIT-I Glass, PVC & UPVC, Steel and Aluminium							
Glass Glass as a building material, Classification, Composition and Properties of Glass. Characteristic and uses of various types of Glass and their application in buildings. PVC and UPVC PVC and UPVC as a building material, Classification, Composition, and Properties. Characteristics and uses of various types of PVC and UPVCs and their application in buildings Aluminium Aluminium as a building material, Classification, Composition, and Properties. Characteristics and uses of various types of Aluminium and their application in buildings Steel Steel as a building material, Classification, Composition, and Properties. Characteristics and uses of various types of steel and their application in buildings The study of manufacturing process, casting, characteristics, form and uses of Cast Iron, Wrought Iron, Steel, Stainless Steel, Aluminium, copper as building materials							
UNIT-II: Timber, Cements and Aggregates.							
Timber Natural timber its types and properties, Seasoning of timber, Manufacturing process and qualities of Decorative and Commercial timber product used in buildings. Cement and Aggregates Cement types and Grades, uses and properties. Aggregates and sand its uses, types and classification. Water Cement ratio.							
UNIT-III: Roof Covering and Laying							
Constituents, Properties, Uses, Process of Laying of Roof Covering Materials e.g. G.I. Sheets, Asbestos Cement Sheets (Plain & Corrugated) with accessories, Clay Tiles - Country, Allahabad & Mangalore Tiles, etc. and PVC covering Properties and applications of copper, titanium and carbon fibre in buildings. Various structural members, Sections and Joinery in Steel, Aluminium and PVC.							
UNIT-IV: Floor Covering and laying							
Constituents, Properties, Uses and Process of Laying of Floor Covering Materials e.g. Brick flooring, PCC Flooring, Terrazo Flooring, Marble flooring, Tile Flooring, Granite Flooring, Paver Block flooring Linoleum, Cork Sheet, Parquets, Rubber (Tiles and Sheets) and introduction to industrial flooring.							
Course Outcomes:							
At the end of the course student will be able to become aware of the roof and floor coverings, glass, steel and timber as building material. Understand details of various material and construction details work out and apply appropriate details for building construction of the same.							
Teaching Methodology s							

Teaching in the subject shall be made combination of: Field/ Project visits-to study the uses of various materials in construction industry and process of lying. Floor/Roof Coverings.
Guidelines for Paper Setter
• One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each part and student would be required to attempt minimum one question from each part. • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

BARCH409-21	Mentoring and Professional Development-II	-	2	50	0	s/ns no credit	No Exam
Course Objective: Guidelines regarding Mentoring and Professional Development The objective of mentoring will be development of: • Overall Personality • Aptitude (Technical and General) • General Awareness (Current Affairs and GK) • Communication Skills • Presentation Skills The course shall be split in two sections i.e. outdoor activities and class activities.							
UNIT-I: Class Activities							
Part – A (Class Activities) 1. Expert and video lectures 2. Aptitude Test 3. Group Discussion 4. Quiz (General/Technical) 5. Presentations by the students 6. Team building Exercises							
UNIT-II: Outdoor Activities							
B (Outdoor Activities) 1. Sports/NSS/NCC 2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc. Evaluation shall be based on rubrics for Part – A & B. Mentors/Faculty in charges shall maintain proper record student wise of each activity conducted and the same shall be submitted to the department.							
Course Outcomes:							
Teaching Methodology							
The course shall be split into two sections i.e. outdoor activities and class activities.							
Guidelines for Paper Setter							
NO Exam							
Evaluation Methodology							
The evaluation shall be based on rubrics for Unit – I & II. Mentors/Faculty in charges shall maintain proper record student wise of each activity conducted and the same shall be submitted to the department.

BARCH 501-21	Architectural Design - V	1	5	60	40	6	12 Hours + Ext viva-voce
Course Objective: The objective of the subject is to enable students to understand: How to design in developing urban areas and Characteristics of a public building. To make students understand and appreciate the constraints in the designing of a buildings with reference to function, form and structure. To create awareness about the role and Importance of physical factors in Architectural Design on flat or contour site.							
UNIT-I: Multi User Building, Urban Setting (Residential and Recreational Building)							
Understanding dynamics of public buildings; activities of visitors and regular users. Providing for daily/regular, monthly, annual events and activities. Relating space and individual; human scale and urban scale. Societal aspirations for aesthetics and form. Role of climate, building services, construction methods, bye-laws, codes (NBC etc.) on building and site design Exercises on studies for grouping of activities in a public building. Design (form and space) for multi activity public facility like shopping complex, Dharamshala, inns, motels, budget hotels, etc. in small and medium towns.							
UNIT-II: Multi User Buildings - Public building (Institutional Nature)							
Understanding dynamics of public buildings; activities of visitors and regular users. Providing for daily/regular, monthly, annual events and activities. Relating space and individual; human scale and urban scale. Societal aspirations for aesthetics and form. Role of climate, building services, construction methods, bye-laws, codes (NBC etc.) on building and site design Exercises on studies for grouping of activities in a public building. Design (form and space) for multi activity public facility like District Collectorate office, Degree College, Residential School, corporation office, Museum, Libraries etc. in small and medium towns.							
Course Outcomes:							
With the successful completion of the course student should have capability to: Design for multiple groups of users with due consideration to site, climate, services, bye-laws. Understand the relationship between design and urban setting and derive a design process and design solution for a public building							
Teaching Methodology							
Minimum two projects/ assignments to be handled by the students individually. Library and prototype studies should be carried out for other projects in groups. Model and perspective should be made integral part of project presentation. Stress should be laid on the understanding the basics of process of design.							
Guidelines for Paper Setter							
One compulsory question is to be set from the entire syllabus.							
Evaluation Methodology							
Evaluation is to be done through viva voce by external jury appointed by the college.							

- Answer sheets should be retained at college level for the viva voce examination.
- The topic of the project is to be displayed on College / Institute Notice Board ten days in advance.

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Studio	int	ext		
BARCH502-21	Building Construction- V	1	3	60	40	4	04 Hours
Course Objective: The objective of the subject is to enable students to understand: • Large span truss components and construction details. • Use of materials like steel, aluminum, glass, gypsum in interiors and exteriors; their construction and to enable them to represent same through technical drawings.							
UNIT-I: Steel trusses and Roofing							
Types and fixing details of steel trusses – saw tooth, roof truss with north light glazing, simple trusses in steel, and ways of fixing and connections (to foundations, steel stanchions, and beams etc.). Space frames (single, double & triple layered tubular space frames with globe connections). Types of materials and details of industrial buildings, warehouse and other building typologies.							
UNIT-II: Steel, Aluminium, and PVC -Door and Windows							
Study of Various types of Doors, windows and frames of Aluminium, Steel and PVC. Study of Sliding door in Aluminium, Steel and PVC.							
UNIT-III: Partitions, Grills and Panels							
Study of various types of aluminium and PVC partitions, its extrusions and fixing details. Different types of PVC, aluminium panels, cladding components for various types' buildings and structures. Aluminium, glass and steel grill modules.							
UNIT-IV: -Glass and Gypsum							
Various techniques to use glass and glass blocks with fixing details (structures like pavilions, greenhouses, staircases, multi storied buildings –curtain walls, roofing, panels). Curtain Wall and Structure Glazing details. Gypsum wall and its construction detail for interiors.							
Course Outcomes:							
With the successful completion of the course student should have capability to: 1. Make a decision which type of construction detailing will be required for a given type of roofing depending on interior and exterior situation and make drawings for the same. 2. Understand design and execute wall partitions with different materials. 3. Understand and execute glass as material. 4. Understanding different type of door and windows and prepare detail drawings.							
Teaching Methodology							
▪ Field visits to study the uses of metals in construction industry and process of lying of Steel Trusses, Aluminium. ▪ Study of Joinery of metals in workshop. ▪ Preparing Construction plates on above topics. ▪ Market study of the products available under different trade names with details of their manufacture, specification and performance.							
Guidelines for Paper Setter							
• Two questions are to be set from each part and students would be required to attempt minimum one question from each part.							

- Students would be required to attempt four questions in all.
- Question paper is to be set covering entire syllabus by making parts and mixing the topics.

Evaluation Methodology

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Tutorial	int	ext		
BARCH503-21	Theory of Design-III	2	0	40	60	2	03 Hours
Course Objective: To make students drive deeper into the Architecture problems and look for directive principles guiding the philosophy of design used by masters of modern/Post modern Architecture and to assess their contribution by their own criteria. Disseminating a broad overview of Art and Design and enabling students to understand visual awareness, creativity and cultural understanding of Design as a Multidimensional creative Art by master Architect's.							
UNIT-I: Foreign Architects – Modern/Post modern Era							
The principles and philosophy of modern/postmodern - in art, design and architecture, worldview and mode of reasoning. Discussions/Presentations on Works/Philosophies of International Architects of Modern/Post Modern Era of Ar. Louis I Kahn, Ar. Eero Saarinen, Ar. Philip Johnson, and Ar. Paul Rudolph. Their Philosophy, works and his influence on architecture in India.							
UNIT-II: Foreign Architects-Post Modernistic /Deconstruction							
Discussions/Presentations on Works/Philosophies of International Architects of Modern/Post Modern Era of Norman Foster, Tadao Ando, Frank Gehry, James Sterling, Richard Meier							
UNIT-III: Indian Architects- Post Modernistic /Contemporary							
Discussions/Presentations on Works/Philosophies of Indian Architects of Post Modern Era of Ar. B.V. Doshi, Ar. Joseph Allen Stein, Ar. A.P. Kanvinde, and Ar. U.C. Jain and their contribution on Indian Soil. Focus should be how these architects achieved the Sustainability in their design.							
UNIT-IV: Indian Architects- Post Modernistic /Contemporary							
Discussions/Presentations on Works/Philosophies of Indian Architects of Post Modern Era of Ar. Charles Correa, Ar. Raj Rewal, Ar. Laurie Baker and Ar. Nari Gandhi and their contribution to achieve the sustainable buildings.							
Course Outcomes:							
At the end of the course, the students will be able to understand, appreciate and learn the design principles, philosophy of design used by masters of modern architects							
Teaching Methodology							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question.							
Evaluation Methodology

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Studio	int	ext		
BARCH504-21	Landscape Architecture-I	2	1	40	60	3	03 Hours
Course Objective: To make students understand the elements of Landscape Design and its application in Architectural Design solutions.							
UNIT-I: Landscape - Introduction							
Introduction to Landscape architecture- its meaning, need and scope, relationship of human and nature, its influence on physical and visual environment. Relationship of landscapes to land, nature, environment and place. Elements and principles of Landscape, form and spatial compositions and its relation to the built environment.							
UNIT-II: Hardscape and Softscapes							
Brief overview of the use of landforms, water, plants, built elements, application of materials, street furniture in a designed landscape. Hardscape: Pavements, decks, walls, fences, steps, benches, railings and trellises Structure, Colour, Form, Foliage of various types of Trees, Shrubs, Cacti Bushes and Creepers etc. Softscape: Plantation, turfing and water features. Basic knowledge of Trees, Shrubs, Cacti Bushes and Creepers etc. Identification and study of a few Indian plants and trees their characteristics, propagation, flowering sessions and uses.							
UNIT-III: History of landscape							
Indian Gardens: Study on comparative basis of development of landscape design through history: Indian Garden and Mogul Gardens. Western Gardens: Study of development of landscape architecture through history in different parts of the world such as Italy, France, Japan, Persia, England. Study on comparative basis of development of landscape design through history: Italian Gardens, French Gardens, English Gardens Japanese Gardens and Persian Gardens							
UNIT-IV: Site Planning							
Site survey and appraisal, Site Inventory checklist – Topography, vegetation, soil, hydrology, climate etc. Principles of site planning, Design issues in site planning and siting of buildings. Integrating the built and open space							
Course Outcomes:							
At the end of the course, the students will able to understand and appreciate the elements, principle and need of design and apply the same in landscape design solutions.							
Teaching Methodology							
Teaching shall be imparted through a combination of lectures by subject experts, visits to the historical gardens developed over the period, landscape projects of repute, study of native and other trees etc. Continuous evaluation shall be made of students work based on assignments and sketching and scrap book of trees should be made.							
Guidelines for Paper Setter							

One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus.

- Two questions are to be set from each part and student would be required to attempt minimum one question from each part.
- Student would be required to attempt five questions in all including compulsory question.
- Question paper is to be set covering entire syllabus by making parts and mixing the topics.

Evaluation Methodology

- Portfolio Submission at the end of semester and internal jury

BARCH505-21	Structure Design - III	2	1	40	60	3	03 Hours
Course Objective: The aim and objective of the course on Structure Design- III is to make students aware about the design methodology adopted and principals involved in designing the structural elements used in the built environment with focus on steel.							
UNIT-I: Compression Members							
Design of Compression members subjected to axial loading involving: Effective length, Radius of gyration, Slenderness ratio, Permissible Stresses							
UNIT-II: Steel beams							
Design of Steel Beams and Sections on the basis of: Bending Stress, Shear Check							
UNIT-III: Steel Truss							
Design of Steel Truss Members for Given Loading, Compressive and Tensile Forces							
UNIT-IV: Riveted/Welded Joints							
Riveted Connections: Different types of Rivets, Type of Riveted Joints, Failure of Riveted Joints, Efficiency of Riveted Joint Welded Connections: Different types of Welds, Advantages/Disadvantage of Welded/ Riveted connections							
Course Outcomes:							
At the end of the course, the students will able to – Design Beams, Compression members, trusses for different conditions by applying code provisions along with the knowledge of Riveted and welded joints							
Teaching Methodology							
Structural design shall be supplemented by structural drawings. Focus on the live study and application of the subject into the architecture design.							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.

BARCH506-21	Building Services-II	2	0	40	60	2	03 Hours
Course Objective: To make students learn and understand the requirements of Building Services and their application to buildings with focus on Electrical, lighting, fire and mechanical circulation.							
UNIT-I: Electrical Services							
Electricity- Ohm's , Kirchoff's Laws and basic Principles. Electric Circuits-- Series and Parallel. Domestic installations- Water heater, Radiator etc. Wires- Specifications /Carrying capacity , Electrical loads. Types of Switches, Sockets and Fixtures. Distribution Boards, Circuit Breakers, Fuses, Electrical Meters and their layout. Design considerations for Electrical Installations from generation to distribution(Energy Flow Diagram). Protection against Overload, Short circuit, Earth fault, Lightning and other safety measures for buildings. Wiring systems- Materials, Types/Methods of wiring							
UNIT-II: Illuminations							
Light - Propagation, Reflection, Radiation, Transmission and Absorption. Illumination –Laws, Measurement, Luminous Intensity, Brightness, Luminance Flux, Glare and their effect. Etc. Illumination Schemes- Types and their design considerations. Light Flux method for calculation of number of lamps for illumination. Lamps-Incandescent, Sodium Vapour, Mercury Vapour, Fluorescent and Neon lamps etc. Types of Luminaires for interior and exterior lighting. Residential, commercial, industry, flood and street lighting. Testing before commissioning of electrical services.							
UNIT-III: Fire Safety							
Fire—Causes, Spread, Combustibility of Materials and Safety Norms. Fire Detection/Warning-Equipment including Smoke Detectors, Monitoring Devices, Alarm Systems. Etc. Fire Fighting—Planning, Designing, Installations, Equipment, Operation and Maintenance. Design Criteria for Fire Exit and Escapes in High Rise Buildings.							
UNIT-IV: Mechanical Services							
Air-conditioning: refrigeration cycle, systems of air conditioning: Unit, split, package, Directexpansion, Chilled water System, Ducting & air conditioning layout, fittings and fixtures. Lifts-Types, Control and Operation, Carrying Capacity, Rated Load, Rated Speed, Lift - Sections, Machine Room, Components, Lift Well and Lift Pit. Design Standards - Lifts Lobby, Lift Cars etc Escalators and Conveyors- Installation and Planning Requirements.							
Course Outcomes:							
At the end of the course, the students will able to: Understand the terminology and basic principles MEP Services Develop design skills for MEP layouts in architecture design							
Teaching Methodology							
Teaching methodology will be a combination of guest lectures from subject experts, Lectures and Site Visits/ Visits to the project Sites and Studio Exercises. Teaching shall also be w.r.t. provisions of NBC Incorporating layouts of relevant services in a multipurpose hall showing Electrical Layout, Fire Safety Plan and Acoustical details.							

Guidelines for Paper Setter
One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each part and student would be required to attempt minimum one question from each part. • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

BARCH507-21	Surveying and Levelling -I	2	1	40	60	3	03 Hrs
Course Objective: To study the distinct methods of surveys, levelling. Study contouring and its elements							
UNIT-I: Surveys:-							
Chain Surveying:- Principal, equipment used, Methods of chaining, base line and stations, obstacles in chaining. Location of inaccessible points by chain. Prismatic Compass survey: - Prismatic & Surveyors compass methods of traversing, adjustment of closing error by graphical method. Plane Table survey: - Different equipment & methods of plane tabling,							
UNIT-II: Levelling: -							
Definitions, methods of levelling, dumpy level, levelling staff, Temporary adjustment of a level, Theory of direct levelling, Differential levelling. Theodolite & its structure, Measurements of horizontal angles.							
UNIT-III: Contouring: -							
Contour interval, Characteristics & Interpolation of contours, contours gradient, Use of contours maps, computation of volume of earth/ Areas from contour plans, Use of Plani-meter.							
UNIT-IV: Total Station and GPS							
Introduction, components, Operation, Advantages/ Disadvantages, GPS, Aerial Surveying, GIS and Remote Sensing.							
Course Outcomes:							
To make students understand and learn about and basics of surveying and levelling and its application in the art and science of designing buildings.							
Teaching Methodology							
Subject shall be taught by a teacher who has practical experience of carrying out field surveys while working on Architectural /Engineering Projects. The teaching shall be supported by undertaking actual surveys of any area/ building in and around the campus to give exposure to the students. All the equipment, stated above, shall be made available to the students by setting up a Survey lab.							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.

BARCH508-21	Elective-1 Interior Design-I	2	1	40	60	2	03 Hrs
Course Objective: To understand and appreciate the complexities and constraints in the design and execution of architectural interiors.							
UNIT-I: Interior -Historical perspective							
Introduction to Interior Design, Interior Design and architecture, Interior Design Process, themes and Concepts Significance of spatial organization, perceptual & psychological needs convenience, maintenance, durability and image in interior design. A Brief historical perspective of Interior Design in various periods Renaissance, Baroque periods, modern design							
UNIT-II: Interior- Elements and Principals							
Elements & Principles of aesthetic composition in interior design. Other interiors accessories used for enhancement of interiors – paintings, objects of art, Interior furnishings i.e. shades, blend, curtains etc. Treatments applied to floors, walls, partitions and ceilings for interior design. Specials Effects of Colour & texture in the interiors ,its psychological impact and various Colour Schemes							
UNIT-III: Interior- Material and Services							
Traditional and modern building materials for interior finishes. Use of materials and various methods of their treatment to obtain certain specific, functional, aesthetic and psychological effects. Application of different types of interior lighting, the lighting effects, types of lighting fixtures. Electrical and mechanical services and their integration into interior design schemes.							
UNIT-IV: Interior – Layout							
Built-in furniture and movable furniture. Furniture selection in relation to human comforts, functions – materials, methods of construction, upholstery. Making a detailed layout of all the planar surfaces of a house (various rooms – offices, children’s rooms, bedrooms, lounge etc.) for understanding the treatment of over-head, lateral and transverse planes.							
Course Outcomes:							
• This subject plays the vital role in creating the strong mind set regarding visualization of the students towards the designing of internal spaces in the field of architecture. • The student can also become an entrepreneur specifically in the field of interior designing. The vast knowledge of interior designer will enrich the utility and quality of interior space.							
Teaching Methodology							
Guidelines for Paper Setter							
▪ One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. ▪ Two questions are to be set from each part and student would be required to attempt minimum one question from each part. ▪ Student would be required to attempt five questions in all including compulsory question. ▪ Question paper is to be set covering entire syllabus by making parts and mixing the topics.

BARCH509-21	Elective -I Product Desing-I	2	1	40	60	2	03 Hrs
Course Objective: To comprehend and integrate the functionality, safety and aesthetics in product designing and sensitized towards the eco-friendly materials & products							
UNIT-I: Introduction							
Introduction to Product Design, Development of product design concepts - a historic review. Elements of design – visual grammar and principles of design. Different techniques for form studies.							
UNIT-II: Ergonomics in Product Desing							
Application of ergonomics in human-product interaction. Design of ergonomic model for specific user-problem. Usability study of product form.							
UNIT-III: Product Design Exercise							
Different techniques to study different user group, Understand the context of use. Understand the user problems through various methods. Quality function deployment, Formation of design requirements SWOT Analysis, different product design methods.							
UNIT-IV: Product Design Exercise							
Application & properties of various types of materials for various aspects of product design. Different types of model making techniques and their application at different stages of product design. Different presentation techniques of final concept of product.							
Course Outcomes:							
At the end of the course the student will be able to appreciate the design principles in product segment and learn the design methods and techniques of product designing. Psychomotor Articulation will enable the students to develop entrepreneurial skills as well as soft skills.							
Teaching Methodology							
- The subject is integrated to subjects like Design, Graphics, Art Appreciation and CAD or with a small component of design exercise with the current or any of the previous semester design works. - The course will include one or several exercises in relation to context of use study, market surveys, presentations, reports, etc.							
Guidelines for Paper Setter							
- One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each part and student would be required to attempt minimum one question from each part. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.

BARCH510-21	Elective -I Furniture Design-I	2	2	40	60	2	03 Hrs
Course Objective: To comprehend and integrate the functionality, safety and aesthetics in product designing and sensitized towards the eco-friendly materials & products							
UNIT-I: Introduction							
Introduction to Furniture Design styles- antique, traditional, modern, contemporary, classical etc. Study of Furniture Design Style to exemplify the method to understand the art form and appreciate them in the context of culture, Understand ergonomics and human anthropometrics							
UNIT-II: Trends in Interior Design							
Current trends in furniture design. Types of furniture like built-in (cabinetry etc.), modular, manufactured, custom-made for seating, storage, sleeping, street furniture and office furniture.							
UNIT-III: Materials							
Study of materials in furniture – timber, plywood, bent wood, bamboo/cane, metal, plastics, polyurethane and glass. Upholstery materials – leather, natural and synthetic fabrics. Study type of finishes like laminate, veneer, lacquer, varnish, stains, polish and 100 adhesives.							
UNIT-IV: Furniture Design							
Understanding selection of furniture, cost and longevity. Study of technology, wood joinery, sections, framework, detailing. Design furniture using found object. Design project like furniture layout, relationship to context and design of furniture.							
Course Outcomes:							
Use of furniture to reinforce interiors and to develop additive interest among students							
Teaching Methodology							
• The subject is integrated to subjects like Design, Graphics, Art Appreciation and CAD or with a small component of design exercise with the current or any of the previous semester design works. • The course will include one or several exercises in relation to context of use study, market surveys, presentations, reports, etc.							
Guidelines for Paper Setter							
▪ One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. ▪ Two questions are to be set from each part and student would be required to attempt minimum one question from each part. ▪ Student would be required to attempt five questions in all including compulsory question. ▪ Question paper is to be set covering entire syllabus by making parts and mixing the topics.

BARCH511-21	Mentoring and Professional Development-III	-	-	50	-	NS	NO Exam
Course Objective: The objective of mentoring will be the development of: Overall Personality Aptitude (Technical and General) General Awareness (Current Affairs and GK) Communication Skills. Presentation Skills. The course shall be split in two sections i.e. outdoor activities and class activities. For achieving the above, suggestive list of activities to be conducted are							
UNIT-I: Class Activities							
Expert and video lectures, Aptitude Test, Group Discussion, Quiz (General/Technical), Presentations by the students, Teambuilding Exercises etc.							
UNIT-II: Outdoor Activities							
Participation in Sports/NSS/NCC activities. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc							
Teaching Methodology							
Evaluation shall be based on rubrics for Part – A & B. Mentors/Faculty in charges shall maintain proper record student wise of each activity conducted and the same shall be submitted to the department							

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Tutorial	int	ext		
BARCH512-21	Institutional Summer Vocational Training	-	-	50	-	1	NO Exam- Internal Viva Voce
Four (04) weeks Institutional Summer Vacation Training after 4th semester for B. Architecture program Course Objective: <i>The training is compulsory and is for the orientation of the students of the B. Architecture so that they are aware of/can identify the industrial, departmental, environmental, societal and other issues that are a challenge in the society and develop the ability to find solutions.</i>							
UNIT-I:							
Extra Skill – 3D Software learning -Self learning Mode 50 Hours							
UNIT-II:							
Study and visit to Construction Site and document the whole process of construction of up to G+4 storey Building. 60 Hours							
UNIT-III:							
Student shall do Market Survey for availability and rates of Construction materials available in the market along with samples. 140 Hours							
Course Outcomes:							
Evaluation Methodology							
i) Four (04) weeks Institutional Summer Vacation Training after 4th semester is a compulsory having One Credit course. ii) The students are required to maintain a daily dairy and submit it along with the “Problem formulation report”. iii) Student falling short of 75% attendance criterion is required to repeat the training with next batch. iv) Continuous evaluation to be done and proper record to be maintained.							
Submission Criteria							
The students need to submit a summary report along with sheets of the institutional training of Module I-II.A detailed report/ scrapbook of inventory and market survey done in Module III.							

The viva exam for the subject will be conducted along with the practical exams of the End-Semester Examination of Fifth Semester.

BARCH601-21	Architectural Design - VI	1	5	60	40	6	12 Hours + Ext viva-voce
Course Objective: To make students understand and appreciate the constraints in the designing of a building in an urban setting with respect to socio-cultural, climate and local development norms. The focus of the studio is on functionality and integration of advanced technology and services. The studio enables understanding the complex mechanisms of designing services intensive buildings in tight urban context, having multiple levels (above and/or underground). The special emphases are on, space optimisation, conformance with regulatory requirements, integration of structural systems and building services (HVAC, fire, electrical, communication, plumbing etc.)							
UNIT-I: Multi-functional and Multipurpose commercial buildings							
Focus should be to design the Building like Auditorium, Cinemas, Theatres, Multiplex. Emphasis on the design of services intensive, multi-storeyed, buildings in tight urban spatial context, such as buildings for multifunctional commercial usage. Design focuses on closed environment, with emphases on interior spaces, integration of various services, and conformance with regulatory norms.							
UNIT-II: Multiple user/Multiple Functional Housing							
Study of an urban complex as a prototype so as to have a basic knowledge of various aspects in planning with focus on urban activity, services and construction methods along with social aspects, growth and change. There could be two design exercises: low-rise high-density housing and high-rise, high-density housing. While designing socio-economic determinants, regulatory and technological alternatives shall be studied in detail. Exercises in simulation and conceptual modelling shall be conducted. Application of concepts of project phasing, financing and construction planning are to be applied.							
Course Outcomes:							
With the successful completion of the course student should have capability to: Design closed environment buildings for a specific purpose for a multiple group of users. Understand and design for energy efficiency. Produce a design process and design output for a specialized building type.							
Teaching Methodology							
Minimum two projects/ assignments to be handled by the students individually. Library and prototype studies should be carried out for other projects in groups. Model and perspective should be made integral part of project presentation. Stress should be laid on the understanding the basics of process of design.							
Guidelines for Paper Setter							
One compulsory question is to be set from the entire syllabus.							
Evaluation Methodology							
- Evaluation is to be done through viva voce by external jury appointed by the college in consultation with the university from the approved panel list of examiners. - Answer sheets should be retained at college level for the viva voce examination.							

• <i>The topic of the project is to be displayed on College / Institute Notice Board ten days in advance.</i>

BARCH602-21	Building Construction- VI	1	3	60	40	4	04 Hours
Course Objective: To make students understand the essential components of working drawings, notations, drawing standards and to strengthen them with their significance in the construction building. To train the students to prepare detailed Working drawings for effective execution at construction site, preparation of integrated services drawings, and detailing for various types of drawings.							
UNIT-I: Working Drawings							
Introduction to working drawings: shop drawings / vendor drawings. Fundamental elements in a "Working Drawing-Plan". Various formats for working drawing preparation. Working drawing details -Preferably Residential or small commercial buildings: Key plans, General Arrangement Plans, Part plans, Roof Plan / Terrace Plan. Demarcation plan & Excavation drawings, Foundation drawings and Foundation details, Centre-line drawings, Floor Plans, Sections, Elevations. Working/ dimensions at all floor levels.							
UNIT-II: Working Drawings							
Basic internal electrical, plumbing and Sanitary drawings. Joinery Details, Toilet Details, Kitchen Details, Staircase Details.							
UNIT-III: Working Drawings							
An overview of site marking procedure, "techniques/thumb rules" to ensure effective translation from "working drawings" to actual site execution, and developing Site Plan , Site Marking Plan , Site Grading / Levelling Plan., Integration with schedule of joinery, schedule of hardware, finishing materials, method of dimensioning, appropriate section line markings. Developing elevations, sections, part sections, wall sections integrated with finishing materials, etc.							
UNIT-IV: Scaffolding, Shoring and Underpinning							
Temporary construction work. Shoring, Underpinning, Retrofitting and strengthening of foundation. Scaffolding of multistored buildings.							
Course Outcomes:							
With the successful completion of the subject the student should be able to : 1. Develop and convert the design intent into a set of good for construction drawings. 2. Be able to read working drawings 3. Communicate with consultants and construction team. 4. Understanding the method of executing of scaffolding							
Teaching Methodology							
Site visits to construction sites. Market study of the products available under different trade names with details of their manufacture, specification and performance. All efforts must be directed to make the learning an enriching experience. An overview of "all service systems integrated drawings" and the effectiveness of "Building Information modelling – BIM " to achieve the same.							

Guidelines for Paper Setter
• Two questions are to be set from each unit and students would be required to attempt minimum one question from each unit. • Students would be required to attempt four questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

BARC603-21	Estimating and Costing	2	0	40	60	2	03 Hrs
Course Objective: This course is intended to impart students with the necessary technical knowledge for preparation of Specifications and calculating estimates and detailed costing for small to medium scale projects							
UNIT-I: Estimating							
Introduction to Quantity estimation, costing and specifications related to building projects. Definition of estimating and costing. Introduction to measurement of various construction work items, importance and significance in construction projects i.e. Units of measurement, rules for measurement, Methods of taking out quantities- Long wall and short wall method, centre line method, partly centre line, cross wall method. Standard modes of measurement as per Indian Standards for various work items. Preliminary/Approximate Quantity Estimates: Importance & purpose of Preliminary / Approximate estimates, Plinth area method, Cubical contents method and centre line method and their preparation. Types of approximate estimates, basic differences and advantages. Detailed Quantity Estimation: Types of detailed estimates and their application, Methods of deriving detailed quantities for various construction work items. Preparation of Detailed estimate, Work items as per construction stages: Foundations, Superstructure, Finishing works in a simple building. Description & significance of Items in Bill-of-Quantities (BOQ).							
UNIT-II: Estimation of Materials and Rate analysis							
Preparing estimates of quantities of materials for various items of work e.g. earthwork, brickwork, flooring, roofing etc- units of measurements and payments. Analysis of rates of material and labour required for various items of work. Bill of Quantities-Methods of taking out the quantities of R.C.C. construction.							
UNIT-III: Specifications							
Introduction, Definition, importance and purpose of specifications, impact on costing. Principles and practices. Types of specifications. Knowledge of manufacturers' specifications for construction materials/products. Specification of common building materials including carriage & stacking of materials. Specifications for a simple building. Standard specifications of BIS. General abbreviations used in specifications. Specification of new building materials.							
UNIT-IV: Case Studies							
Case study/practical exercise in preparing a detailed estimate of a two storeyed residential building with respect to the quantities of material and labour required as well as analysis of rates for material and labour. Introduction, importance, Role, Functions and Types of Specifications Detailed Specifications for various basic building materials							
Course Outcomes:							
At the end of the course, the students will be able to prepare detailed estimates and cost of two-storeyed residential buildings in masonry and reinforced cement concrete.							

Teaching Methodology
Teaching in the subject shall be a combination of lectures by subject Experts, class room exercises, Market Surveys.
Guidelines for Paper Setter
One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. - Two questions are to be set from each unit and student would be required to attempt minimum one question from each unit. - Student would be required to attempt five questions in all including compulsory question. - Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

BARCH604-21	Architectural Legislation	2	0	40	60	2	03 Hours
Course Objective: To make students familiar with the role and importance of Legal Framework in Designing the Built Environment and Promoting orderly growth of Human Settlements.							
UNIT-I: Need of Law							
Need, Role and Importance of Legislation in the Building Industry, Building Bye- laws-- Contents and Scope • Study of Building Bye- laws Chandigarh- Intent and Contents, • Study of Building Bye- laws, PUDA- Intent and Contents •							
UNIT-II: Municipal Byelaws							
• Study of Municipal Building Bye- laws - Intent and Contents • Architectural Controls- Need, Typology, Contents and Applicability • Introduction to various Acts- Periphery Control, Property Regulation Act, Regional and Town Planning Act, Chandigarh Capital Act, Heritage Conservation Act. • RERA Act							
UNIT-III: Approval of Buildings							
• Requirements of Submission of Documents/ Drawings for approval of Building Plans in Chandigarh, PUDA, Local Bodies • Completion/ Occupation Certificate for Buildings- Need and Procedure • Preservation and Conservation of Heritage Buildings, Heritage Regulations							
UNIT-IV: Building Codes							
• National Building Code, - Study of Important Definitions , Types of Buildings, • Protection of Industrial/ Multi-Storeyed Buildings against Fire etc w.r.t. National Building Code • Disability Act							
Course Outcomes:							
At the end of the course, the students will able to understand need for building byelaws, importance of legislation in building industries and NBC norms.							
Teaching Methodology							
Guidelines for Paper Setter							
• One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each unit and students would be required to attempt minimum one question from each unit • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.

BARCH605-21	Structure Design - Project	1	2	50	50	3	No Exam External Viva
Course Objective: To create skill among students to apply the knowledge gained regarding structural design in an applied project and to make buildings safe against natural/ manmade disasters							
UNIT-I:							
Detailed Structural Design & Drawings of a Public /Residential Building, (R.C.C. frame structure) with emphasis laid on practical design considerations.							
UNIT-II:							
Earth quake Resistant Design. Introduction to Codal provision, IS- 4326 and IS- 1893 for Earth quake Resistant Design of Buildings. Earth quake Resistant provisions for Brick Masonry& R.C.C. Buildings.							
Course Outcomes:							
At the end of the course, the students will able to – design RCC Beams, Slabs, Columns, and footings with different loads for one-story simple buildings.							
Teaching Methodology							
Student shall prepare report consisting detailed structure design of building considering all safety factors including fire, earthquake, cyclone, flood, etc. Report to be prepared in bound form with drawing attached of structure of single story.							
Guidelines for Paper Setter							
No Exam, only viva of the projects.							
Evaluation Methodology							
Evaluation is to done through viva voce by the external examiner appointed by the college in consultation with the university from the approved panel list of examiners.							
References:							
IS-456 CODE IS-800 CODE IS-4326 CODE IS-1893 CODE							

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Studio	int	ext		
BARCH606-21	Building Services-III	2	0	40	60	2	03 Hrs
Course Objective: The objective of the subject is to develop the understanding of important Services in buildings, definitions and terms used, functioning and their applications in building. The objective of the subject is to enable students to understand and apply: Basic laws and terminologies related to Acoustics, Acoustical requirements of a given activity, its calculations and designing of the space. Enable students to understand and apply: Overview and introduction to heating, ventilation, and air conditioning focusing on different HVAC systems. HVAC requirements for given situation, its calculations and design.							
UNIT-I: Air Conditioning							
Air conditioning--Role, Importance and Principles governing Air conditioning Refrigeration Cycle, Air cycle, Cooling Load Methods of Cooling and Heating-Evaporative Cooling etc Types of Air Conditioning Systems-Unit and Central Standards and location of various parts- Plant, Ductwork, Fan ,Filters, Outlets, Dampers, Natural and Artificial Ventilation							
UNIT-II: Acoustics							
• Acoustics- Introduction, Role, Importance, Concept, Basic Principles of Design, • Sound- Basic principles governing transmission, reverberation, absorption, reflection etc. • Acoustics-Materials- application, advantages and disadvantages • Acoustics in Buildings- Design considerations for various buildings including Class Room, Studio, Lecture Theatre, Auditorium, OAT etc							
UNIT-III: Building Automation/ Building Management System							
Concept and application of Automation Systems in buildings. Design issues related to building automation and its effect on functional efficiency. Components of building automation system integrating HVAC, electrical, lighting, security, fire-fighting, communication etc. Current trend and innovation in building automation systems; Knowledge base and decision support systems and building automation and management system; Application of expert system in building automation.							
UNIT-IV: Intelligent Buildings							
Intelligent Buildings- Concept, applicability and limitations Introduction to the historical development of intelligent buildings Description, definition and components: development of European and world modes: Key stakeholder analysis: Integrated course framework Components of the intelligent building Building and business systems: Systems integration and interoperability: Building aspects: Site, structure, skin, services, space plan and stuff/set factors. Building and facilities Management, organisation and systems, Changing building usage							
Course Outcomes:							
At the end of the course, the students will able to :							

• With the successful completion of the course student should be able to Understand the basics of acoustics. Develop capability to apply the fundamentals of acoustics in the design of building. Communicate with technical accuracy in a professional and an academic environment. • With the successful completion of the course, student should : Understand principles for designing of large scale mechanical services. Understand BMS and their execution in building projects. Have capability interact technically with MEP experts. • Understand the importance of intelligent buildings
Teaching Methodology
Teaching in the subject shall be a combination of lectures by subject Experts, Site visits and Schematic layout exercises.
Guidelines for Paper Setter
One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each unit and student would be required to attempt minimum one question from each unit. • Student would be required to attempt five questions in all including compulsory question. • Question paper is to be set covering entire syllabus by making parts and mixing the topics.
Evaluation Methodology

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Tutorial	int	ext		
BARCH607-21	Environment Science-I	2	0	40	60	2	03 Hours
Course Objective: The objective of the subject is to enable students to understand environmental variables.							
UNIT-I: Natural Resources							
• Introduction: Definition and scope and importance of multidisciplinary nature of environment. Need for public awareness. • Natural Resources: Natural Resources and associated problems, use and over exploitation, case studies of forest resources and water resources. • Ecosystems: Concept of Ecosystem, Structure, interrelationship, producers, consumers and decomposers, ecological pyramids-biodiversity and importance. Hot spots of biodiversity							
UNIT-II: Environment pollution							
• Environmental Pollution: Definition, Causes, effects and control measures of air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, nuclear hazards. • Solid waste Management: Causes, effects and control measure of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. • Disaster Management: Floods, earthquake, cyclone and landslides.							
UNIT-III: Social issues							
• Social Issues and the Environment From Unsustainable to Sustainable development, Urban problems related to energy, Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Case studies. • Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of pollution) Act. Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation Public awareness							
UNIT-IV: Human Population							
• Human Population and the Environment, Population growth, variation among nations. Population explosion–Family Welfare Programme. Environment and human health, Human Rights, Value Education, HIV/AIDS. Women and child Welfare. Role of Information Technology in Environment and human health. Case studies							
Course Outcomes:							
Upon successful completion of the course, students should be able to Measure environmental variables and interpret results. Evaluate local, regional and global environmental topics related to resource use and management							
Teaching Methodology							
Guidelines for Paper Setter							
• One compulsory question of short answers type containing 6 questions of 2 marks each (12 Marks) is to be set from the entire syllabus. • Two questions are to be set from each unit and student would be required to attempt minimum one question from each unit.							

- Student would be required to attempt five questions in all including compulsory question.
- Question paper is to be set covering entire syllabus by making parts and mixing the topics.

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Practical	int	ext		
BARCH608-21	Elective-II Building Information Modelling	1	2	60	40	2	No exam. Internal Viva Voce.
Course Objective: The main objective of the subject is to Produce 3D computer models of structures using established standards. Understand the transition from 2D to 3D representations. Be able to analyse and extract building information data for a BIM base model							
UNIT-I Introduction, Site and Data Extraction							
BIM INTRODUCTION: Definition of BIM, history of BIM. BIM on the architecture and engineering disciplines . SITE & DATA EXTRACTION: Site Topography, Building Pads BIM BASICS: Introduction & modelling, Interface and navigation. 3D drafting: basic model building, Structural grids, support BIM BASICS: Introduction & Modelling (cont.) Levels, Floors, Roofs, Ceiling, Windows, Doors. Navigation: Ribbon, Sketch Mode, General Interface. Basic dimensions, Building sections, plans and elevations. BIM COLLABORATION: Collaboration in a BIM environment Integrated project delivery Sharing models							
UNIT-II: BIM Modelling and Parametric Families							
BIM MODELING: Systems Structural systems MEP systems. Circulation (stairs, pathways, etc.) Documentation. PARAMETRIC FAMILIES: Instance vs. Type Parameters, Massing: In-place mass, Conceptual mass. Families: Loading and using basic families, creating basic families							
UNIT-III: Detail Documentation and Rendering							
DETAILS AND DOCUMENTATION: Construction details, Detail views, Sheet Organization, and Title block. DOCUMENTATION AND RENDERINGS: Scheduling, Tags, Table, Legends, Advanced Annotations. 3D Renderings, Materials, Materials Library, Lighting.							
UNIT-IV: Architecture and Engineering BIM Collaboration.							
ARCHITECTURE AND ENGINEERING BIM Collaboration benefits and limitation Structure: MEP CONSTRUCTION COORDINATION: Principles of Integrated Project Delivery IPD Model integration Identifying and resolving issues CONSTRUCTION COORDINATION: Principles of Integrated Project Delivery IPD Model integration Identifying and resolving issues SOFTWARE ENVIRONMENTS: Software environments and solutions Pros and cons of different BIM tools.							
Course Outcomes:							
With the successful completion of the subject student should be able to: ● Extract and analyse data from site topography. ● Create basic building models using structural grids and support systems.							

● Design basic building components including levels, floors, roofs, etc. ● Employ parametric modelling in 3D design. ● Incorporate the mechanical, electrical, and plumbing systems into the 3D building model. ● Produce the building details and documentation. ● Create high-quality and annotated building section drawings and renderings
Teaching Methodology
The course is structured as a series of individual and group-based projects in which students apply the principles of building information modelling. The course content will be delivered in a computer classroom setting that allows students to immediately apply the acquired knowledge on the relevant BIM software platform.
Guidelines for Paper Setter
Evaluation Methodology
Evaluations will be distributed at intervals during the semester Evaluations will be based primarily on student's work, rather than effort expended. Students are expected to acquire knowledge and skill, not merely endeavour to do so.

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Practical	int	ext		
BARCH609-21	Elective-II Computational Design	1	2	60	40	2	No exam. Internal Viva Voce.
Course Objective: The main objectives of the course are to develop an in-depth knowledge and understanding of key concepts of computational design and parametric tools in architecture. To develop an advanced awareness of how the development of digital, computational and parametric tools procures implications on design, structure, construction, shape and form of architecture products.							
UNIT-I Introduction to Computational Design							
Theoretical Positions on Computational Design in Architecture. Key concepts of Digital Design in Architecture. Generative Strategies Using data-driven generative modelling strategies to develop siteless landform, enclosure, and ground patterning strategies. (Rhino & Grasshopper)							
UNIT-II: Generative Relationships							
Generative Relationships: Deploying the generative strategies to a series of three site using arraying techniques and surface projection (Rhino & Grasshopper). 3D Modelling tools Parametric software. Design Optimisation 8. Performance Simulation							
UNIT-III: Data Ecologies							
Data Ecologies: Analysing the three designed sites created in Module II using introductory and advanced techniques in mapping and data visualization (Rhino, Grasshopper, Ladybug Tools, GIS & Illustrator, tentatively). Growth and Form in Nature. Natural Patterns and their formations							
UNIT-IV: Constructed Narratives							
Constructed Narratives : Documenting the design process and site impacts over time using animation, notation, and time-based media (After Effects, Grasshopper, etc.)							
Course Outcomes:							
After completion of the subject students are able to: Demonstrate knowledge and understanding of key concepts of the theory behind the computational design discipline. Acquire a large vocabulary of established computational techniques, software tools, fabrication systems and the terminology used in these.							
Teaching Methodology							
PowerPoint and articulate presentations, comparative analysis, self-analysis, self-assessment, individual support and feedback, tutorials, case study analysis							
Guidelines for Paper Setter							
Evaluation Methodology							
ABILITY to UNDERSTAND, ANALYZE, and DISCUSS topics related to computers in architecture and design,							

CAPACITY to ANALYZE, INNOVATE and APPLY solutions to problems related to lecture themes, CAPACITY to EXPLORE, INNOVATE and APPLY computational design to design problems.

BARCH610-21	Elective-II Remote Sensing and GIS	1	2	60	40	2	No exam. Internal Viva Voce.
Course Objective: To introduce application of remote sensing and GIS for object identification, identification of land use and base map preparation.							
UNIT-I Introduction							
Study of GIS platform and sensors. Basic principal of GIS. Methods of photo interpretation and techniques of data collection through satellite data. Classification techniques using satellite data, Digital image processing, enhancement techniques in urban information extraction.							
UNIT-II: Aerial photography							
Aerial photography as a tool for collection of data and preparation of maps, its application in planning and preparation for a project, orientation concept and methodology transformation and adjustment techniques. Experiments in lab, Instruction for making overlays, computation of photo scale, orientation of a stereo pair under a mirror stereoscope. Recognition on aerial photograph of objects indicated on ground photographs							
UNIT-III: Detection and identification							
Detection, identification and description of defined objects. Use of auxiliary features for object identification. Systematic scanning of a photograph, and object identification. Monitoring urban changes and Mosaic preparation.							
UNIT-IV: Analysis							
Base map preparation, elementary data analysis using satellite data. Experiments in lab and instruction for making overlays. Study Classification, interpretation and delineation of various land use on satellite data. Study GIS techniques and their application in planning field							
Course Outcomes: With the successful completion of the subject student should be able to: Usage of remote sensing and GIS as analytical tool for study of urban area and land use identification and forecast.

27th Dec 2023

Course Code	Course Name	Contact Hours		Marks		Credits	Examination
		Lecture	Studio	int	ext		
BARCH701-21	Practical Training Programme	Office Hours		350	150	18	External Viva

Intent: To make student learn the intricacies of architecture profession by joining and working with practicing Architects/Architectural firms for one complete semester.

Practical Training Manual

Practical Training Manual:

- The total marks shall be suitable apportioned to assess on regular basis the monthly reports office work and work done outside office hours.
- Students are required to send/submit monthly reports of work done by them reports, office work and work done by them in the office in which they are working according to prescribed schedule. These reports should be assessed/ remarked by practical training coordinator (PTC).

On the conclusion of the training the work done by the students should be evaluated through the viva-voce to be conducted jointly by the director/ principal/ HOD, PTC and one External Examiner, who will be appointed by the Director/ COE/ Principal.

Work to be Done By students:

Work to be done by the students:

- During training, students are required to do distinct types of work in order to make optimum utilization of the period of training.
- Work to be done during office hours: a) Drafting, Tracing, sketch designs, Presentation drawings, Perspectives, models, documentation etc. b) Working Drawings and details.

Distribution of Marks

DISTRIBUTION OF MARKS:

- **University (External) marks – 150.**
- University Viva-Voce – 100. (To be conducted by the external expert appointment by the principle)
- Marks awarded by the employer- 50. (To be sent in original to the Director/ COE/Principal)
- **Internal marks- 350. (To be sent by PTC in the given format)**

Joining reports	20marks
Monthly report	80 Marks
Building study report	125 marks
Seminar/presentation	125 Marks

Evaluation Methodology
EVALUATION MEATHODOLOGY: • Based on above guidelines a detailed programme shall be drawn each year by PTC, which should be approved by the Director/ Principal before it is implemented. The intention will be updating the programme on regular basis, incorporating new details, with focus on making continuous qualitative improvement of the practical training.

Note: For Open Elective Course,

- Minimum 2 credits are required, however students may opt for any 3 credit subjects, if offered by University/College.
- In case of standalone College/ Department of Architecture student may opt any of the following courses related to AI/ Computational Design/ Parametric Design/3D animation.

B. ARCHITECTURE - VIII SEM.
ARCHITECTURAL DESIGN-VII

Course Code	Course Name	L, ST/T, P	Credits - 9		Duration of Exam
BARCH-801-21	Architectural Design -VII	2 L, 7 ST	Int 60	Ext 40	Portfolio viva voce

COURSE OBJECTIVE: To make students understand the principles and implications of advance and complex design problems with focus on planning, landscaping, energy conservation and services considering zoning regulations.

COURSE OUTCOMES: At the end of the course, the students will be able to:

- understand the principles and implications of advance and complex design problems with focus on planning, landscaping, energy conservation
- design problems with focus on services and considering zoning regulations
- design complex health care academic projects, design for pandemics situations, etc.
- design Terminals of air/railway/bus
- design Light Industrial buildings for different uses.

CONTENTS

The design programme includes:

- Planning and Designing of large Complexes related to **Health care and academic Institutions**-Hospitals cum Medical Colleges etc.
- Planning and Designing of **Traffic Nodes**-Bus Terminal, Railway Station, Airport.
- Light **Industrial Buildings** involving manufacturing, display, etc.

NOTE:

All buildings must incorporate the Universal Design Principles and recommendations.

TEACHING METHODOLOGY

- Minimum Two projects should be done by the student. The Projects selected should be based on realistic contexts.
- The design submitted shall include complete project drawings, perspective, models and details
- Teaching focus will be to promote design concept based on Site, Landscaping, Climate, Energy, Services, Safety and compliance with Building Regulations etc

EVALUATION METHODOLOGY

- External marks shall be awarded through viva- voce conducted by the External Jury appointed by the University of the work done by the student during the semester.

B. ARCHITECTURE - VIII SEM.
BUILDING CONSTRUCTION& MATERIALS - VII

Course Code	Course Name	L, ST/T, P	Credits - 5		Duration of Exam
BARCH-802-21	Building Construction & Materials - VII	2 L, 3 ST	Int 60	Ext 40	04 hours

COURSE OBJECTIVE: To make students understand the details of finishes , materials and construction work.

COURSE OUTCOMES: At the end of the course, the students will be able to:

- understand special constructional details,
- understand finishing & furnishing,
- learn the details of extension & expansion joints and
- learn the details of basements with details.

TOPICS

UNIT-I

- Study, design and details of various types of counters and Interior finishes, lighting for Banks, Hotels, Offices, Shops, Railway station and other public places.

UNIT-II

- Materials and Construction details of wall Panelling, False Ceiling including Thermal and Acoustics treatments.

UNIT-III

- Extension and Expansion joints in R.C.C.
- Construction of Basement including design, detailing, treatment for water/damp proofing etc.
- Study of Prefabricated structures.
- Advantages and disadvantages of on-site and off- site pre- fabrication.
- Pre-fabricated components, involving simple details in prefabrication.

TEACHING METHODOLOGY –

Teaching methodology shall be a combination of:

- Field visits to study the interiors and details of the buildings.
- Preparing Construction plates.
- Market study of the products available under different trade names with details of their manufacture, specification and performance.
- Site Visits and details of prefabricated structures

GUIDELINES FOR PAPER SETTER

- Minimum Six questions are to be set from the entire syllabus with Two Questions from each unit.. Student would be required to attempt three questions with minimum one from each unit.
- Question paper is to be set covering whole of the syllabus by making parts and mixing the topics.

REFERENCE BOOKS:

B. ARCHITECTURE - VIII SEM.
URBAN DESIGN-I

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-803-21	Urban Design-I	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVE: To create awareness and promote understanding of the nature, role and importance of Urban Design in the making of quality Built Environment and Human Settlements

COURSE OUTCOMES: At the end of the course, the students will able to:

- create awareness and promote understanding of the nature,
- role and importance of Urban Design in the making of quality Built Environment and Human Settlements

CONTENTS

UNIT- I

- Introduction, Role, Scope and Importance of **Urban Design**
- Distinction between **Urban Design, Architecture and Town Planning**
- **Elements of Urban Design-** Pattern, Grains, Texture, Density etc, their role and importance.
- **Determinants of Urban Form** – Landform, Climate, Symbolism, Activity Pattern, Socio-cultural Factors, Materials, Techniques etc. and their role and importance.
- **Imagability-** Elements their role and importance including Paths, Nodes, Landmarks Edges, Districts etc
- **Designing Cities-** Role and importance of Communication, Utilities, Landscape Features, Transport, Visual Expression, Size, Contrast, Urban Character etc.
- **Shapes of the Cities-** Comparative advantages and Disadvantages

UNIT- II

- **Urban Spaces-**Typology including Street, Square, Precinct, Piazza, Mall etc
- **Urban Spaces-** Elements, identification, characteristics and role in shaping the spaces
- Changing Role ,Importance and Pattern of **Urban Spaces** in historical perspective- **Greek, Romans, Medieval and Contemporary cities.**
- **Design Principles** involving Scale and Enclosures
- **Development Controls-** Role and Importance in Urban Design.
- **Urban Design study of selected Capital Cities-** Chandigarh, Delhi and Jaipur
- **Legal and Institutional framework** for Urban Design including Delhi Urban Art Commission- Objectives, Constitution, Role, Importance, Impact etc

TEACHING METHODOLOGY

- Emphasis shall be laid on understanding of evolution of Cities and Buildings . Continuous evaluation shall be made of students work based on various assignments and sketching.
- Teaching in the subject will be a combination of Expert lectures, specific case studies and field visits of historical and contemporary cities.
- Students would be required to do, in groups, a case study of a city to make them

understand the various aspects of urban design . The study will be illustrated with maps, visuals, photographs and sketches.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 5 questions of 2 marks each (10 Marks) is to be set from the entire syllabus (4 Marks and 6 marks from unit I and Unit –II respectively)
- In addition, Four questions are to be set from each UNIT.
- Students are required to attempt five questions including compulsory question with two questions from each UNIT.
- Questions paper is to be set covering entire syllabus by making parts and mixing the topics.

REFERENCE BOOKS:

B. ARCHITECTURE – VIII SEM.
HOUSING-I

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-804-21	Housing - I	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives:

To make students understand the role, importance and issues related to housing.

CONTENTS

UNIT I

- Role and importance of Housing
- Status of Housing in India
- Housing need, demand and concept of affordability.
- Housing typologies including plotted and flatted development
- Housing surveys including methods of conducting surveys
- Housing- problems and solutions in India
- Housing for the Poor
- Slums -Origin, Growth, Problems and Solutions
- Role of Public and Private Sectors in Housing.

UNIT II

- National Housing and Habitat Policy 2007
- Institutional framework for Housing Finance
- Institutional framework for Housing Delivery
- Factors affecting Cost of Housing
- Basic Housing Norms and Standards for EWS, LIG and MIG

GUIDELINES FOR PAPER SETTER

- Total 8 Questions to be set from both parts.
- Five Questions will be set from Part- I and Three Questions from Part-II.
- Student will be required to answer Five Questions, Three Questions from Part- I and Two Questions from Part – II.
- Attempt will be made to cover the entire syllabus.

REFERENCE BOOKS

- National Housing and Habitat Policy 2007 Rangwala S C, “Town Planning”
- National Building Code, 2005

HIGH RISE BUILDINGS-I
(Elective IV)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-805-21	High Rise Buildings-I	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives: To make students aware and understand the context of planning, designing and construction of High Rise buildings and their role and importance in shaping the Human Settlements and Urban Form in the Modern Context.

CONTENTS

UNIT I

- **High Rise Buildings-** Introduction, Historical perspective, Origin, Definition, Role, Importance , Limitations, Advantages and Disadvantages
- **Planning /Designing** of High Rise Building
- **Construction** of High Rise Buildings
- **Building Technologies** used in the Construction
- **Building Materials** used in the Construction

UNIT II

- Study of **Building Services** in the High Rise Buildings
- **Fire Safety and Structural safety** of High Rise Buildings
- Study of **Legal Framework** governing the High Rise Buildings
- Study of **National Building Code**, 2005
- Study of famous **High Rise** Buildings-Burj Khalifa, Sears Towers, Empire State Building, World Trade Centre, Imperial Towers and Orchid Woods Mumbai .

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of invited lectures , visit to Multi-Storyed/ High Rise Buildings and library studies/power point presentations of High Rise Buildings mentioned above.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing Five questions of 2 marks each (10 Marks) is to be set from the entire syllabus (4 Marks and 6 marks)
- In addition , Four questions are to be set from Each Unit .
- Students are required to attempt Five questions including compulsory question with minimum One question from each UNIT.
- Questions paper is to be set covering entire syllabus by making parts and mixing the topic

B. ARCHITECTURE - VIII SEM.
ADVANCE BUILDING SERVICES-I
(Elective IV)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-806-21	Advance Building Services-I	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives:

- To provide in-depth knowledge of advanced building systems, including HVAC, electrical, plumbing, fire safety, and automation.
- To integrate building services with sustainable and energy-efficient design practices.
- To equip students with skills to design, evaluate, and manage building services in complex projects.

CONTENTS

UNIT I: Advanced Building Services and Building Automation

- Overview of building services and their integration into architectural design.
- Role of advanced building systems in modern architecture.
- Introduction to codes and standards (e.g., NBC, ECBC, IGBC, GRIHA).
- Introduction to building automation systems (BAS) and IoT.
- Integration of smart technologies for lighting, HVAC, and security.
- Role of AI and machine learning in building management systems.
- Future trends in intelligent building design.
- **Additional Exercise –**
 - Case Studies: Analysis of iconic Indian buildings with advanced systems (e.g., Infosys Bangalore Campus).
 - Practical Demonstration: Developing a conceptual smart building system.

Unit II: HVAC Systems and Electrical Systems (2 Weeks)

- Principles of heating, ventilation, and air conditioning.
- Types of HVAC systems: central, split, VRF, etc.
- Design considerations for energy efficiency and indoor air quality.
- Applications in residential, commercial, and industrial buildings.
- Basics of electrical systems: distribution, lighting, and safety.
- Smart grids and renewable energy integration.
- Design of lighting systems for various building types.
- Electrical load calculation and management.
- **Additional Exercise –**
 - Hands-On/Software: Introduction to HVAC design tools like Carrier HAP.
 - Case Studies: Energy-efficient lighting design in Indian buildings.

UNIT III: Plumbing, Water Systems and Fire Safety Systems

- Water supply systems, rainwater harvesting, and wastewater management.
- Plumbing design for high-rise buildings.
- Greywater recycling and treatment technologies.
- Sustainable water management practices in urban settings.
- Basics of fire safety: prevention, detection, and suppression.
- Firefighting systems: sprinklers, hydrants, alarms.
- Fire safety codes and evacuation strategies.
- Integration of fire safety into architectural design.
- **Additional Exercise –**
 - Practical Assignment: Design a water supply and plumbing system for a given building layout.

- Case Studies: Fire safety audit of a university building.

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of invited lectures, case studies, site visits, etc. Student must be encouraged to complete any one of the additional exercises mentioned in each unit either individually or in groups as applicable.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing Six questions of 2 marks each (12 Marks) is to be set from the entire syllabus covering all the important topics.
- In addition , two descriptive type questions are to be set from each Unit (total six questions) carrying 12 marks each. .
- Students are required to attempt Five questions including compulsory question with minimum One question from each UNIT.
- Questions paper is to be set covering entire syllabus by making parts and mixing the topic

B.ARCHITECTURE - VIII SEM.
ARCHITECTURAL CONSERVATION-I
(Elective V)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-807-21	Architectural Conservation-I	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives: To promote understanding and importance of the Historical buildings and their preservation and conservation.

CONTENTS

UNIT-1

- Heritage- Introduction, Definition, Role, Importance, Scope and Limitations
- Study of basic historical styles in Indian Architecture.
- Study of ornamentation and detailing in historical buildings in various styles.
- Study of construction methods and structural analysis of various historical building styles e.g. Arches Domes, Vaults and Shikharas etc.

UNIT-II

- Study of finishes in historical buildings.
- Effects of weathering/ pollution on historical buildings.
- Study of landscaping style/ Plantation around historical buildings.
- Knowledge of plantation/ water features in Mughal Garden and Hindu Temples.

UNIT-III

- Methods of studying and documenting historical monuments in the context of guidelines issued by UNESCO, INTACH.
- Methods of saving monuments from vandalism.
- Study of existing Legal framework to protect Heritage and its limitations
- Institutional framework to protect Heritage

TEACHING METHODOLOGY

- Emphasis shall be laid on understanding of Architectural Conservation. Continuous evaluation shall be made of students work based on various assignments and sketching.
- Teaching in the subject will be a combination of Expert lectures, specific case studies and field visits of historical and contemporary buildings/complexes.
- Students would be required to do, in groups, a case study of a historical building to make them understand the various aspects of Architectural Conservation. The study will be illustrated with maps, visuals, photographs and sketches.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 5 questions of 2 marks each (10 Marks) is to be set from the entire syllabus.
- In addition, the examiner is to set Seven questions with minimum Two from each unit. Student would be required to attempt Five questions with minimum One from each unit including compulsory question

- Questions paper is to be set covering whole of the syllabus by making parts and mixing the topics.

REFERENCE BOOKS :

- Oliver Paul, “Encyclopaedia of Vernacular Architecture of world”
- Thakkar Jay, “Matra: Ways of measuring Built form of Himachal Pradesh”, CEPT University.

B. ARCHITECTURE - VIII SEM.
SUSTAINABLE ARCHITECTURE-I
(Elective V)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-808-21	Sustainable Architecture-I	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives: To educate and make students aware about sustainability issues, need and importance of promoting sustainable Architecture.

CONTENTS

UNIT-I

- **Sustainable Development-** Introduction, definitions, objectives and scope
- **Man and Environment-** Introduction, issues and options
- **Human Settlements-** Planning, Growth, Development, Problems
- **Global warming –** Introduction, Causes, Effects and Remedies, Carbon Credits.
- **Architect-Role in Sustainable Development.**
- **Energy - Role, Importance in buildings**
- **Sources of Energy- Non- renewable and renewable – Role and Importance**
- **Sustainable Materials –** Production and use
- **Quality of indoor/outdoor environment**

UNIT-II

- **Sustainable Design –** Concept, Objectives, Principles, Approach to Sustainable design
- **Built Environment-** Sustainable Construction, Ecological Buildings, Green Building
- **Building Rating System**
- **ECBC Code**
- **Sustainability Assessment -** LEED, Life Cycle Assessment, GRIHA
- **Climate responsive and Solar Passive Strategies in Indian Climates**
- **Recycling/Reuse**
- **India's approach to sustainable Development**

TEACHING METHODOLOGY

- Emphasis shall be laid on understanding of Sustainable Development.
- Teaching in the subject will be a combination of Expert lectures, specific case studies and field visits to sustainable buildings/complexes.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 5 questions of 2 marks each (10 Marks) is to be set from the entire syllabus .
- In addition, the examiner is to set Seven questions with minimum Three Questions from each unit. Student would be required to attempt Five questions with minimum Two from each unit including compulsory question

REFERENCE BOOKS:

- Koensberger, Ingersoll, Mayhew, Szokolay, "Manual of Tropical Housing & Building, March 1974
- C.P. Kukreja, "Tropical Architecture, Tata McGraw-Hill Publishing Company, 1978.

B. ARCHITECTURE - VIII SEM.
BUILDING MAINTENANCE - I
(Elective V)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-809-21	Building Maintenance - I	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives: To make student understand the Role and importance of the building maintenance in built environment.

CONTENTS

UNIT-I

- Maintenance- Introduction, Need, Scope, Importance& Role of an Architect.
- Maintenance-Economic and Social significance
- Maintenance - Problems and issues related to materials, design and detailing.
- Climate- Effect on the life cycle of buildings.
- Deterioration and Decay of buildings- Typology, Reasons, Prevention
- Deterioration and Decay- Causes, Effect, Remedies

UNIT-II

- Defects in Buildings-Efflorescence, Dampness, Settlement, Cracks, Corrosion etc - causes, effects, preventive and remedy
- Retrofitting of Buildings for Structural safety
- Building service and maintenance -- water supply, sewerage, and Sanitation system.
- Case study of any existing building

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures, Specific case studies and field visits to buildings in deteriorating conditions.
- Lectures from representatives of industry and visits to the industrial units involved in producing materials to make buildings safe will be made integral part of teaching

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 5 questions of 2 marks each (10 Marks) is to be set from the entire syllabus.
- In addition, the examiner is to set Seven questions with minimum Three from each unit. Student would be required to attempt Five questions with minimum One from each unit including compulsory question
- Questions paper is to be set covering whole of the syllabus by making parts and mixing the topics.

B. ARCHITECTURE - IX SEM.
ARCHITECTURAL DESIGN-VIII

Course Code	Course Name	L, ST/T, P	Credits - 9		Duration of Exam
BARCH-901-21	Architectural Design -VIII	2 L, 7 ST	Int 60	Ext 40	Portfolio viva voce

COURSE OBJECTIVE: To make students understand the principles and implications of advance and complex design problems with focus on planning, landscaping, energy conservation and services considering zoning regulations.

COURSE OUTCOMES: At the end of the course, the students will be able to:

- understand the principles and implications of advance and complex design problems with focus on planning, landscaping, energy conservation
- design problems involving large projects with focus on services and considering zoning regulations through group design
- handle large projects involving urban environment, incorporating urban design elements and prevailing building regulations.
- understand and design Public Buildings with diverse activities involving incorporating universal design elements.

CONTENTS

The design programme includes:

- **Higher Order of Office/Commercial complex**, -City Centre, District Centre, Large Exhibition Complexes, Convention Centre Multiplexes
- **Campus designing** - University, Professional Institutes, Integrated Campus etc.
- **Capital Complex**-Secretariat, High Court, Assembly

NOTE:

All buildings must incorporate the Universal Design Principles and recommendations.

TEACHING METHODOLOGY

- Minimum Two projects should be done by the student. The Projects selected should be based on realistic contexts.
- The design submitted shall include complete project drawings, perspective, models and details
- Teaching focus will be to promote design concept based on Site, Landscaping, Climate, Energy, Services, Safety and compliance with Building Regulations etc

EVALUATION METHODOLOGY

- External marks shall be awarded through viva- voce conducted by the External Jury appointed by the University of the work done by the student during the semester.

B. ARCHITECTURE - IX SEM.
BUILDING CONSTRUCTION& MATERIALS - VIII

Course Code	Course Name	L, ST/T, P	Credits - 5		Duration of Exam
BARCH-902-21	Building Construction & Materials - VIII	2 L, 3 ST	Int 60	Ext 40	03 hours

COURSE OBJECTIVE: To make students aware and learn about advance construction techniques and preparing project drawings.

COURSE OUTCOMES: At the end of the course, the students will be able to:

- understand special constructional details & advance construction techniques,
- learn the details and prepare complete drawings
- learn modular construction techniques & their implementation in large commercial projects

TOPICS

UNIT-I

- Complete Set of Working Drawing of a major design project of 8th semester including Site plan, Foundation plans, Elevations and Sections.
- Commercial Kitchen- Study, designing and working drawing
- Introduction to Pre- stressing and Post- Tensioning
- Mass production, Transportation, Storage and handling of construction materials.

UNIT-II

- Materials used in building façade with construction details.
- Modular Construction- Objectives, basic principles, planning and structural modules.
- Curtain Walls- Role, functions, materials, principles and details
- Elevators, Escalators, Travellators, Refuse Chutes- The study and details of Construction.

TEACHING METHODOLOGY

- Teaching in the subject shall be a combination of field/ site visits, visit to industrial units involved in mass production and preparing construction plates on above topics.
- Market study of the products available under different trade names with details of their manufacture, specification and performance.
- Site Visits to understand details & applications of the various elements discussed in the syllabus

GUIDELINES FOR PAPER SETTER

- Total 6 Questions to be set from both parts with 3 Questions will be set from each unit
- Student will be required to answer 4 questions with minimum 2 questions from each Unit

REFERENCE BOOKS:

a) Building Materials

- Rangwala S.C, “Engineering Materials, Charotar Publishing House, India

B. ARCHITECTURE - IX SEM.
TOWN PLANNING

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-903-21	Town planning	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVE: To make students understand the role and importance of Town Planning in the evolution of Human Settlements and Urban Forms in the Historical and Modern Context.

CONTENTS

UNIT-I

- Introduction, Role, Importance and Scope of **Town Planning**
- Planning Principals of Human Settlement in **Nile Valley, Greek and Roman Periods.**
- **Town Planning in India-** Vedic period, Indus Valley, Islamic, Medieval and Colonial Period.
- **Classification of Human Settlements** based on Road Pattern, Form, Use, Scale/ Population etc.
- **Planning Concepts-** Garden City, Linear City, Industrial City and Sustainable City and Neighborhood

UNIT- II

- **Master Plan** – Objectives, Role, Importance and Methodology.
- **Regional Plan** - Objectives, Role, Importance and Methodology
- **Existing Towns and Cities in India-** Problems, Remedies etc.
- **Urbanization** – Causes, Pattern and Effect in India.
- **Study of New Towns in India** – Chandigarh, New Delhi & Gandhi Nagar.
- Town Planning in Punjab
- Role of **Development Authorities** in Urban Development.

GUIDELINES FOR PAPER SETTER

- Total 8 Questions to be set from both parts. 3 Questions will be set from each Unit
- Student will be required to answer Five Questions minimum Two Questions from each unit

REFERENCE BOOKS:

- **UDPFI Guidelines** – Ministry of Urban Development
- Rangwala S C, “Town Planning”
- Spreiregan Paul D, “**Urban Design: The Architecture of Towns and Cities**”.
- Gallion Arthur B, “**The Urban Pattern: City Planning and Design**”.

- Agarwala S.C. “**Architecture and Town Planning**”
- **Institute of Town Planner (India)** – Readers Volum
- **Report of National Commission on Urbanization** – Govt. of India.
- **Census of India** – 2001 and 2011

B. ARCHITECTURE – IX SEM.
BUILDING ECONOMICS

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-904-21	Building Economics	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives: To make students understand the role, importance and issues related to housing.

CONTENTS

UNIT I

- **Building Economics**-Introduction, Definition, Role, Scope, Importance and Principles of building economics.
- **Cost of Building**- Components, Impact of various components ,Types of costs including Construction Cost, Maintenance cost, Operational Cost etc
- **Cost Management**- Aims, Objectives, Need , Principles, Procedure, Cost Analysis.
- Analysis of Comparative Economics of **Low Rise and High Rise Buildings**

UNIT II

- **Technology** – Role, Importance, Use, Up-gradation of local Technologies to make buildings cost- effective.
- **Materials**- Role, Importance, Innovative building materials ,up-gradation of local materials, Comparative analysis of available building materials
- **Construction Techniques**- Study of Innovative Building Techniques for cost reduction with comparative merits and Demerits
- Introduction, Role and Importance of **Modular construction, Pre- Engineered Buildings, Mass Production, Standardization** etc in cost effectiveness
- **Cost Reduction** -through Planning, Designing and Specification of buildings involving Space Optimization and Structural Innovations
- **Space Norms**- Role and importance of Space Norms for Cost –reduction, Principles for defining Space Norms, Norms defined in NBC.

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures, Specific case studies and field visits to Low Cost buildings
- Lectures from representatives of industry and visits to the industrial units involved in producing building materials will be made integral part of teaching
- Students would also be encouraged to attend building material exhibitions etc.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 3 questions are to be set from each UNIT.
- Students are required to attempt five questions including compulsory question and two questions from each UNIT.

REFERENCE BOOKS:

- Sustainable Buildings- Design Manual Vol- I&II by TERI
- National Building Code, 2005
- Lal A K “Hand book of Low Cost of Housing”, New Age Publishers
- Readers Volume on Housing – Institute of Town Planners, India
- Report of Govt. of India on Housing Shortage
- Journal of IIA, April 2013

B. ARCHITECTURE - IX SEM.
HILL ARCHITECTURE
(Elective VI)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-905-21	HILL ARCHITECTURE	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVES: To make students aware and understand the specific requirements of art and science of designing buildings in hill areas based on climate, topography, local materials, social factors etc.

CONTENTS

UNIT-I

- **Hill Architecture-** Introduction, historical perspective, specific attributes/unique features etc.
- **Traditional Hill Architecture of Medieval Europe-** overview , specific features, building materials, building technologies
- **Hill Settlements-**Approach, overview ,specific features of planning and designing in different climatic regions of the world
- **Disasters in Hill Areas:** - Issues and Options.

UNIT- II

- **Hill Architecture in India-** Growth, Development, Character and unique features
- **Building Typologies-** Study of various types of traditional buildings in different Hill Regions of India with their unique features
- Factors effecting **design of buildings** in Hill Areas- Topography, Climate, Vegetation, Materials, Technology, Sustainability Social factors etc- their role and importance
- **Building Technologies-** Study of different technologies for construction of Foundations, Walls. Floors, Roof etc in Hill Regions of India
- Study of Traditional **Hill Settlements** in India with their planning features
- **Hill Architecture** in Post- independence Period- Approach, Pattern, Typical features, Materials, Technologies etc and their impact on ecology, environment and Sustainability of Hill Areas

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures from Architects practicing/ having experience in the Hill areas, visit to any nearby hill settlement and library studies of different hill regions of India and Europe.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 3 questions are to be set from each UNIT.
- Students are required to attempt 5 questions including compulsory question and minimum two questions from each UNIT.

REFERENCE BOOKS:

- Oliver Paul, "Encyclopedia of Vernacular Architecture of world"
- Thakkar Jay, "Matra: Ways of measuring Built form of Himachal Pradesh", CEPT University.

B. ARCHITECTURE - IX SEM.
VERNACULAR ARCHITECTURE
(Elective VI)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-906-21	Vernacular Architecture	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVES: To make students understand and appreciate the elements , techniques and factors which go into the making of vernacular architecture as distinct from other styles of architecture

CONTENTS

UNIT-I

- **Vernacular Architecture-** Meaning, Role, Importance & basic Theories.
- **Determinants of Vernacular Architecture-** Role and importance of social, cultural, political, economic , climatic, technological factors

UNIT-II

- **Vernacular Architecture-Role and importance of** Materials & Technology
- Vernacular Architecture and Disaster Management.

UNIT-III

- **Illustrated Case studies -** Vernacular settlements/Building typology from various regions in India and abroad.
- Study of **Vernacular Architecture of various Regions of Punjab** with their distinct features/elements .

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures, visits to historic buildings representing peculiar culture, technology and architectural elements, visits to museums and archives with library studies of different regions of Punjab and India.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 2 questions are to be set from each UNIT.
- Students are required to attempt 5 questions including compulsory question and minimum 1 question from each UNIT.

REFERENCE BOOKS:

- Oliver Paul, “Encyclopaedia of Vernacular Architecture of world”
- Thakkar Jay, “Matra: Ways of measuring Built form of Himachal Pradesh”, CEPT University.

B.ARCHITECTURE - IX SEM.
TRAFFIC AND TRANSPORTATION
(Elective VII)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-907-21	Traffic And Transportation	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVES: To create awareness and impart knowledge about Traffic and Transportation and related issues.

CONTENTS

UNIT-I

- **Traffic and Transportation-** Introduction, Need, Role and Importance
- **Transport Systems-**Typologies, basic character and comparative advantages and disadvantages.
- Role of **Bicycle** as a preferred mode of transport including planning for Bi-cycles
- **Inter and Intra city Traffic-** Nature, characteristics, problems and solutions
- **Accidents-** Causes, effects, and remedies to promote Road Safety
- **Problems and Issues** related to Traffic and Transportation in the Indian cities and Core areas with options to meet these challenges.
- **Parking-** Introduction, Types, Requirement, Problems and Solutions.

UNIT-II

- **Traffic Control Devices-** Typology, Application and comparative Merits and Demerits
- **Signage-** Introduction, Objectives, Function and classification
- Design of **Road Intersections**, Rotaries, Over bridges, Underpasses, Flyovers with reference to a well designed city like Chandigarh.
- **Roads-** Hierarchy, Classification, Capacity, Road Cross-sections
- **Mass Transportation/ Public Transport-**Concept, Characteristic, Mode, Advantages and disadvantages
- **Surveys-**Objectives, Need, Importance, Types and Methodologies for conducting Traffic Surveys .
- National Transport Policy
- Traffic Management and Land use Planning

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures and visits to areas of high traffic including City centre, Commercial areas, Wholesale Markets. Core Areas and Major Road Network passing through the city. The visit will also include traffic nodes like Bus Terminus, Railway Station, and Truck Terminus.
- Students should be made to do a small traffic survey in a congested area.

Guidelines for Paper Setter

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 3 questions are to be set from each UNIT.
- Students are required to attempt 5 questions including compulsory question and minimum 2 questions from each UNIT.

REFERENCE BOOKS:

- Kadiyali, "Traffic and Transportation"
- National Transport Policy
- Agarwala S C, "Architecture and Town Planning"
- Institute of Town Planner (India) – Readers Volume
- UDPFI Guidelines – Ministry of Urban Development
- National Building Code

B. ARCHITECTURE - IX SEM.
LANDSCAPE ARCHITECTURE-II
(Elective VII)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-908-21	Landscape Architecture-II	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVES: To make students aware of the role and importance of landscape design in creating sustainable built environment and in promoting quality of ecology and environment in and around buildings.

CONTENTS

UNIT- I

- **Landscape Design-** Introduction, process, nature, scope, relationship between Man and Nature, Role and importance of Ecology
- **Relationship between Architecture and Landscaping**
- **Landscape Design-**Basic Elements, Role and Importance, Problems and Potentials-- Earth, Rock, Water, Plants, Grass, Gravel, Vegetation etc
- **Recreation Spaces-**Typology, Planning and Designing
- **Landscape Gardens-** Historical perspective from earlier period to contemporary designs
- Arboriculture, Garden Furniture, Signage

UNIT- II

- Site Analysis- Role, Importance, Contour/ Mapping in Landscape Design
- Surveys- Purpose, Need ,Objectives, Role , Importance in Landscape Design
- Process of Landscape Design including role of services (Electrical and public health)
- Formal and Informal Landscape
- Study of eminent contemporary landscape design works/ projects

TEACHING METHODOLOGY

- Teaching shall be imparted through a combination of lectures by subject experts, visits to the historical gardens developed over the period, landscape projects of repute, study of native and other trees etc
- Continuous evaluation shall be made of students work based on assignments and sketching.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 3 questions are to be set from each UNIT.
- Students are required to attempt 5 questions including compulsory question and minimum 2 questions from each UNIT.

REFERENCE BOOKS:

- Reid Grant W, "Landscape Graphics"
- Littlewood Michael, "Landscape Detailing"
- Harris and Dines, "Time Saver Standard for Landscape Architecture"- Plants of India

B. ARCHITECTURE - IX SEM.
INDUSTRIAL ARCHITECTURE
(Elective VII)

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-909-21	Industrial Architecture	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVES:

- To understand the evolution, typologies, and functional characteristics of industrial buildings.
- To develop knowledge about site planning, services, and structural systems in the context of industrial architecture.
- To integrate functional planning with sustainable and efficient design strategies through project work. COURSE OUTCOMES:

At the end of the course, students will be able to:

- Analyze the functional, structural, and environmental aspects of industrial architecture.
- Understand the planning and design principles applicable to various industrial typologies.
- Apply theoretical concepts to a minor industrial design project incorporating services and circulation.
- Propose site-specific, sustainable, and efficient design solutions for industrial buildings.

CONTENTS

UNIT-I: Fundamentals of Industrial Architecture

- Historical development and evolution of industrial architecture
- Role and relevance of industrial architecture in urban and economic contexts
- Classification of industries: light, medium, heavy, and service-based industries
- Functional components: admin blocks, production areas, storage, dispatch, utilities
- Planning principles: workflow, safety, human factors, zoning
- Case studies of selected industrial buildings in India and abroad
- Introduction to site planning: site selection, layout zoning, access, setbacks, expansion
- Circulation: movement of men, material, and machinery
- Introduction to industrial services: power, lighting, ventilation, HVAC, fire safety

UNIT II: Systems, Technology, and Design Application

- Structural systems in industrial buildings: portal frames, space frames, steel trusses, RCC
- Prefabrication, modular construction, PEBs (Pre-Engineered Buildings)
- Integration of building services: electrical, mechanical, waste management, ETP/STP
- Environmental and sustainability aspects: green factories, daylighting, energy efficiency
- Safety standards, building regulations, and relevant IS/NBC codes for industrial buildings
- Typologies: warehouses, processing units, food & pharma industries, automobile plants, IT parks
- Overview of automation and smart technologies in modern industrial buildings
- Design strategies for expansion, flexibility, and industrial resilience

SUGGESTED ACTIVITIES:

- Functional layout analysis of an existing factory/plant
- Site analysis and conceptual zoning exercises
- Design of a small-scale industrial unit (e.g., textile unit, dairy, tool fabrication unit, logistics warehouse)

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures, Specific case studies and field visits to study layouts of industrial buildings
- Lectures from representatives of industry and visits to the industrial units involved in producing materials to make buildings safe will be made integral part of teaching

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 3 questions are to be set from each UNIT.
- Students are required to attempt five questions including compulsory question with minimum two questions from each UNIT.

B. ARCHITECTURE - IX SEM.
REPORT WRITING

Course Code	Course Name	L, ST/T, P	Credits - 2		Duration of Exam
BARCH-910-21	Report Writing	2 L, 0T	Int 60	Ext 40	External Viva-Voce

Course Objectives:

- To equip students with the skills to write professional, academic, and technical reports related to architecture.
- To understand the structure, purpose, and styles of various types of reports.
- To guide students in research, data analysis, and visual documentation techniques.
- To Prepare students to write and present a professional-quality architectural thesis report.

Course Outcome:

By the end of the course, students will be able to:

- Develop a logically structured and technically sound report.
- Use appropriate research tools and analysis techniques.
- Communicate architectural ideas clearly through written, visual, and tabular formats.
- Apply standard formatting, citation, and academic writing techniques in thesis documentation.
- Defend their reports effectively through presentations and discussions.

CONTENTS

UNIT I: Understanding Report Structure and Research Orientation

- Purpose and types of architectural reports
- Structure of a B. Arch thesis report:
 - Abstract, Introduction, Objectives
 - Literature Review / Case Studies
 - Site Analysis and User Studies
 - Design Rationale and Conclusion
- Identifying the research problem and framing research questions
- Setting aims, objectives, and scope
- **Exercises:**
 - Dissect a sample report
 - Define aims and objectives for personal thesis topic
 - Prepare a report content outline

UNIT II: Data Collection, Analysis & Writing Techniques

- Types of data: primary (site, users, interviews) and secondary (literature, codes, reports)
- Techniques for data analysis and interpretation
- Writing methodology, site analysis, case study synthesis
- Writing strategies: clarity, coherence, avoiding plagiarism
- Integrating visuals: maps, tables, diagrams, graphs
- **Exercises:**
 - Draft site analysis or literature review section
 - Present a table/diagram with appropriate caption and explanation
 - Create a visual data summary of field survey

UNIT III: Formatting, Referencing, Compilation & Review

- Formatting standards for architectural reports
 - Layout, fonts, margins, headings, page numbering
- Referencing styles: APA/MLA and bibliography preparation
- Table of contents, list of figures/tables, appendices
- Peer review, editing, proofreading

- Final report compilation and submission guidelines
- **Exercises:**
 - Format a report chapter using departmental template
 - Prepare bibliography using a citation tool
 - Submit a mock full report (related to thesis) for feedback & evaluation

EVALUATION CRITERIA:

Internal (60 marks)

- Assignments/Practical: 30 marks (abstracts/, visuals integration, referencing)
- Mid-Term Draft Report Submission: 24 marks
- Attendance: 6 marks, awarded in accordance with university notification

External (40 marks)

- External Viva-Voce: 40 marks - It will be based on the brief presentation (5-8 minutes) and final report submitted by the students.

B. ARCHITECTURE - X SEM.
ARCHITECTURAL DESIGN-IX (Thesis Project)

Course Code	Course Name	L, ST/T, P	Credits - 18		Duration of Exam
BARCH-1001-21	Architectural Design- IX (Thesis Project)	2 L, 16ST	Int 300	Ext 200	Portfolio viva voce

COURSE OBJECTIVE: To make student synthesis and use knowledge of various disciplines gained during entire study in an architectural project of his choice.

COURSE OUTCOMES: At the end of the course, the students will be able to:

- understand the principles and implications of advance and complex design problems with focus on planning, landscaping, energy conservation
- design problems involving large projects with focus on services and considering zoning regulations through group design
- handle large projects involving urban environment, incorporating urban design elements and prevailing building regulations.
- understand and design Public Buildings with diverse activities involving incorporating universal design elements.

CONTENTS

A. Thesis project will comprise of the following:

- **An Illustrated Report-** which will include the validity and scope of the chosen project, methodology, prototype studies, site analysis, client's and architect's briefs, delineation of programme and design criteria.
- **A fully worked-out Design Proposal-** including consideration of site planning structures, services, and any other aspect/specific to the project.

B. Stages of Work:

The entire process of Thesis Design shall be divided into four distinct stages involving:

1. Approval of Project:

- The intent of the thesis project as well as the criteria for selection of the project will be introduced to the students around the 6th week of the previous semester, i.e. 9th Semester B.Arch.
- Before the closing of the 9th Semester, students will be required to submit brief write-up on three projects out of which one will be approved.

2. Rough Report:

- Rough Report shall comprise of all analytical aspects of the project including Synopsis, Library studies, Prototype studies, Site analysis, Delineation of Building Program, etc.

3. Evolution of Design :

- Shall be worked out in minimum of four stages.

4. Draft of Final Report:

- Shall include Evolution of Design, Final Report, Drawings and Model, to be evaluated through a University Examination- Through a visual presentation/ viva-voce.

NOTE

- Students will be required to submit two identical copies of the final report along with a soft copy, on a standard format prescribed in the thesis programme issued by the Thesis Coordinator.
- The report must also include A-3 size copies of all final drawings and at least two photographs of the final model/models.
- The original copy of the report, the final drawings and models will be returned to the student after the declaration of the result. The photocopy along with the soft copy of the report and drawings will be retained for reference in the college library.

C. SCHEDULE OF SUBMISSIONS/EXAMINATION

(Note: Commencement of the semester will be considered as Zero week.)

Stages of work	Time allocated	Max. Marks
1. Sessional Work		
(a) Rough report	6 weeks	100
(i) Synopsis	1 week	20
(ii) Preliminary Library studies	2 weeks	20
(iii) Site analysis, Prototypes/ Additional Library studies	2 weeks	30
(iv) Programme Formulation	1 week	30
(b) Evolution of Design	5 weeks	150
(i) Design Criteria and Concept		25
(ii) Design Proposal Stage-1		25
(iii) Design Proposal Stage-2		50
(iv) Pre-final Design		50
(c) Draft Final Report with drawings.	5 week	50
(Incorporating improvements suggested in Rough Report, Design Criteria and explanatory Sketches of Evolution of Design)		
2. External Examination		200

SUBMISSION REQUIREMENTS

- Students are required to submit the Final Report, all final drawings and models in the standard format prescribed in the Thesis programme.
- The students would also be required to submit an abstract of the thesis project.
- Submission will be made one day before the date of examination.
- All buildings should have accessibility to physically challenged persons.

EVALUATION METHODOLOGY:

- The thesis studio will be conducted under the overall coordination of the Thesis Coordinator. In addition, two members of the Visiting Faculty would also be associated throughout the duration of the studio. Each student will be assigned a Thesis Guide (from amongst the faculty) who will supervise the progress of the student's work on a regular basis.
- Approval of the thesis project/topic will be done by the Principal/HOD, the Thesis Coordinator and the concerned Thesis Guide.
- All stages of Sessional work will be evaluated jointly by the Principal/HOD and the entire studio team (Thesis Coordinator, Visiting Faculty and the concerned Thesis Guide).
- Jury for the External Examination will comprise the Principal/HOD, Thesis Coordinator and two External Examiners appointed by the P.T.U.

B. ARCHITECTURE - X SEM.
CONSTRUCTION MANAGEMENT

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-1002-21	Construction Management	2 L, 1 T	Int 40	Ext 60	03 hours

COURSE OBJECTIVE: To make student understand and appreciate the role and importance of management in building construction.

CONTENTS

UNIT-I

- **Project Management-** Concept, Background, Purpose, Aim, Objectives, Scope and Significance
- **Traditional Management Systems-** Advantages and limitations
- **Role of Architect** in Construction/Project Management
- **Resources** of Construction Industry.
- **Construction** stages, Construction team, Equipment Management

UNIT-II

- **Project Management Techniques-** Network ,CPM, PERT,
- **CPM Analysis-** Critical Path, Float Computation Result Sheet etc
- **PERT-** Introduction, Theory and Network analysis
- **Cost Time** analysis in Network Planning.
- **Financing of Project**, Depreciation and Break even Cost analysis
- **Cost Control-** Budget, Accounting System, Problems

UNIT-III

- **Quality and Safety-** Objectives, Issues, Organising for Quality and Safety
- **Stages of Inspection** and Quality control
- **Planning of Temporary Services** at the site.
- **Security of Materials** and Manpower at building site.
- **Computer Application** in Construction Management

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures and visits to Construction /Project Sites and discussions with Project Managers
- Students would be required to do a case study of a ongoing construction project

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 2 questions are to be set from each UNIT.
- Students are required to attempt 5 questions including compulsory question and minimum 1 questions from each UNIT.

REFERENCE BOOKS:

- Peurify R.L, “Construction Planning, Equipment and Methods”, International Book Company
- Srinath L S, “PERT & CPM Principles and Applications”, EWP Limited New Delhi
- Bhatnagar S K, “Network Analysis Techniques”, Willey Eastern Limited

B. ARCHITECTURE - IX SEM. PROFESSIONAL PRACTICE

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-1003-21	PROFESSIONAL PRACTICE	2 L, 1T	Int 40	Ext 60	03 hours

COURSE OBJECTIVE: To make students understand and familiar with different aspects of Architectural Practice and Professional Responsibilities.

CONTENTS

UNIT- I

- **Architects** – Role, Functions, Social Obligations, Profession Activities, Responsibilities etc.
- **Indian Architects Act 1972** – Scope, Objective, Role & Importance in managing the profession and professionals .
- **Council of Architecture** – Constitution, Role and Function, Registration of Architects etc.
- **Indian Institute of Architects** – History, Objectives, Role and Function in promoting Architectural profession and education.

UNIT- II

- **Architectural Practice** – Type of Practices, Setting office, Office Organization, Management, Income Tax, Service Tax etc.
- **Architectural Competition** – Importance, Type, Procedure, Guidelines framed by Council of Architectural to conduct competition, including Role of Board of Assessors, Professional Adviser and Technical Advisers.
- **Code of Professional conduct**
- Conditions Governing the **Appointment of Architects**, Scale of Professional charges, Execution of work and payment of fee.

UNIT- III

- Duties, Responsibilities and Liabilities of **Client, Architect, Contractor** and their mutual relationship.
- **Tenders**- Type, Process, Scrutiny and Selection of Contractor, Pre Qualification and Registration of Contractor.
- Concept of **Contract**.
- **Copy Right Act** as Applicable to Architectural work.
- **Complaints** – Procedure for lodging complaints, and their Resolution based on Indian Architects Act 1972
- **Valuation** - Purpose, Objective, Types and Method of valuation.
- Arbitration and Reconciliation Act.

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures from Architects working in the profession, visits to the offices and discussions with reputed Architects.
- Students should be encouraged to attend professional meets organized by the professional bodies including IIA, COA, IOE etc.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 2 questions are to be set from each UNIT.
- Students are required to attempt 5 questions including compulsory question and minimum 1 questions from each UNIT.

REFERENCE BOOKS:

- Indian Institute of Architects Hand Book – IIA
- The Indian Architects Act, 1972.
- Council of Architecture – Hand Book of Professional Documents – 2007.
- Indian Arbitration Act.
- Chakraborty M, “Estimating, Costing & Specification and Valuation in Civil Engineering and Service Tax Manual”
- Nanavati R, “Professional Practice”
- Apte V S, “Professional Practice & Management”

B. ARCHITECTURE – IX SEM.
DISASTER MANAGEMENT

Course Code	Course Name	L, ST/T, P	Credits - 3		Duration of Exam
BARCH-1004-21	DISASTER MANAGEMENT	2 L, 1T	Int 40	Ext 60	03 hours

Course Objectives: To make the students understand the various Pre & Post- disaster design and management measures to make buildings safe against Earthquakes.

CONTENTS

UNIT-I

- **Disasters:** Introduction, Typologies, Causes, Effects and prevention
- **Earthquake:** Causes, Effects, Problems & design issues
- General Principles of designing **RCC & Masonry buildings** against Earthquake
- **Special construction techniques** to make buildings safe against Earthquake
- Study of **Earthquake Zones** in India-- features and Design/
construction requirements
- **Role of Architects and Planners** in creating Safe Buildings/Cities

UNIT-II

- Introduction , Causes, Effects of **Fire, Floods, Cyclones, Landslide, Tsunami, Avalanche, etc.**
- General requirements, principles and measures for **making safe building design** against Fire, Floods, Cyclones, Landslide, Tsunami Avalanche, etc.
- **Special Technique** for constructing safe buildings for above disasters
- **Pre- disaster and Post- disaster management-** problems, issues and options

TEACHING METHODOLOGY

- Teaching in the subject will be a combination of Expert lectures, Site visits to Structurally safe buildings and discussions with reputed Architects.
- Students should be encouraged to attend professional meets organized by the professional bodies including IIA, COA, IOE etc. on Disaster resistant buildings.

GUIDELINES FOR PAPER SETTER

- One compulsory question of short answer type containing 6 questions of 2 marks is to be set from the entire syllabus, in addition, 3 questions are to be set from each UNIT.
- Students are required to attempt five questions including compulsory question with minimum two questions from each UNIT.
